Global Information Assurance Certification Paper

Computer Forensic Analysis of an Unknown Binary
and
The Complete Computer Forensic Investigation of a Hard Drive

Author: Brian Capellini
Assignment: GCFA v1.2;
Part 2 option B

Abstract/Summary

This document is divided up into three main sections. They are: Analyze an Unknown Binary, Perform Forensic Analysis on a System, and Legal Issues of Incident Handling.

The first section, Analyze an Unknown Binary, is on the investigation of a binary that was found on a compromised computer. The investigation started by gathering the background information such as the last access, last modified, and creation dates, as well as the size of the file. Then the binary was analyzed, using certain Linux tools like strace, to determine its uses. After the binary was completely analyzed, the source code for it was located on the Internet and downloaded. It was compiled and the newly compiled program was compared to the unknown binary. The legal issues concerning this binary on a computer system were discussed as well as certain interview questions that could be asked to the person who is suspected of installing this binary on the computer.

The next section, Perform Forensic Analysis on a System, is on the complete forensic investigation of a hard drive in an unknown state. This hard drive was found in a dumpster without the computer or any other hardware. The investigation starts by creating a bit-by-bit copy of the hard drive and then calculating the md5sum of both the hard drive and the image. The forensic tool Autopsy v1.62 was used to analyze the contents of the hard drive. The investigation revealed all the programs installed on the system, some websites the users of this drive visited, and some files that the users created.

The last section, Legal Issues of Incident Handling, is on the scenario of being an Internet Service Provider and receiving a call from a law enforcement official stating that an account on the system was used to hack into a government computer.

Table of Contents

Part 1 – Analyze an Unknown Binary

Binary Details

The analysis system that I used to examine the binary was a dual boot machine of Windows XP and Red Hat Linux 8.0. The system had a 20 GB Maxtor hard drive, 10 GB Western Digital hard drive, a floppy drive, a zip drive, a CD-ROM drive, and a CD burner. The processor of the system was a 1 GHz Athlon and it had 256MB of PC-133 RAM. Later on during the investigation, I removed Red Hat Linux 8.0 and installed Red Hat Linux 6.1 in its place. This system was not connected to a network. All analysis in this part was performed in Linux.

The name of the unknown binary that was found on the system was atd. The binary had a creation date of 08/22/2002 and a creation time of 15:57:54. It had a last modified date of 08/22/2002 at 15:57:54, and it had a last accessed date of 08/22/2002. These times show that the unknown binary was put on the system on 8/22/2002 and the binary was not modified in anyway after that date nor was it executed after that date. To obtain these times I placed the zip archive containing the unknown binary onto a blank floppy disk. I then mounted this disk with the nodev, noexec, noatime, and nosuid flags set. The command for this was "mount –o loop,nosuid,noexec,nodev,noatime /dev/fd0 /mnt/floppy." I extracted the binary to the floppy disk and used the command "dd if=/dev/fd0 of=/image/floppy.img" to make an image of the floppy disk. I then used the tool Autopsy's file-browsing feature to obtain these times. See the section Forensic Tools Used in Part 2 of this document for more information on Autopsy and on how to configure it. For step three in the configuration the line I added to the fsmorgue file was "floppy.img fat A: EST5EDT."

I was also able to obtain the user ID and Group ID by using this feature. The user ID and group ID were both zero, which means the unknown binary was installed as root and belongs to the root group. In other words the person who installed this binary had root access to the system. The file size was15,348 bytes and the MD5 hash obtained by running the "md5sum" command was 48e8e8ed3052cbf637e638fa82bdc566, which matches the value in the file atd.md5. Refer to Figure 1 for a screen shot of the output from the md5sum command.

```
[root@Brian floppy]# md5sum atd
48e8e8ed3052cbf637e638fa82bdc566  atd
[root@Brian floppy]# cat atd.md5
48e8e8ed3052cbf637e638fa82bdc566  atd
```

Figure 1. Screen shot of the output from the md5sum command.

I ran the “file” command on the binary to make sure it was an executable, as well as to see how it was linked. The output of this command stated that the file was an “ELF 32-bit LSB executable, Intel 80386, version 1, dynamically linked (uses shared libs), stripped.” ELF 32-bit LSB executable means that this file is a Linux executable. Shared libs means that this executable needs shared system libraries in order to run.

The next step was to determine what libraries this binary uses. To accomplish this the command “ldd” was used. The output from this command was: “libc.so.5 => /usr/i486-linux-libc5/lib/libc.so.5.”

I then ran “strings” on the file and found some keywords associated with the binary. They were LOKI2, lokid, the string “© 1997 guild corporation worldwide,” and the string “lokid -p (i | u) [-v (0 | 1)].” The first two words look like they may possibly be a program title. The string “© 1997 guild corporation worldwide” could be the developer of this program. The last string looks like the command line used when executing the program.

Program Description

By analyzing the output of the strings command I was able to conclude that this binary was some kind of server that could be executed using the command line “lokid -p (i | u) [-v (0 | 1)].” This command line verifies that the name of the program is lokid.

I decided to use the program strace to determine how the program works. Strace is a debugging tool that prints out all the system calls a process makes. Before running strace, I took a snapshot of all processes running and I saved the output to ps.bef. The syntax for the command was “ps –u root > ps.bef”. I also took a snapshot of all open ports on the analysis system and saved the output to nmap.bef. The syntax for the command was “nmap –p 1-65535 localhost > nmap.bef.” I took a snapshot of all open udp ports on my system. The syntax for the command was “nmap –p 1-65535 localhost –sU > nmap_udp.bef.” The last snapshot I took was of all active Internet connections. The syntax for the command was “netstat –ap > netstat.bef.” See Appendix A, pages 44-48 , for the complete contents of these files.

Strace is a Linux tool that displays all system calls a program makes. I executed strace with the –u bin option specified to determine if the binary needed to be run with root privileges. The –u bin option runs the binary as the user “bin” and not as the user currently logged on, which in this case was root. The binary exited and outputted “[fatal] invalid user identification Value: Unknown error.” This error was caused by not running the binary as root. I ran “strace” again, but this time I did not use the –u option and I did not receive an error. In the output of strace I found the system call fork(), which spawns off a child process. The child process that was spawned off had a PID of 10695. I ran ps with the –aux options specified and found that there was a child process with the same name as the

binary running and with the PID of 10695. Refer to Figure 2 below for the output of this command.

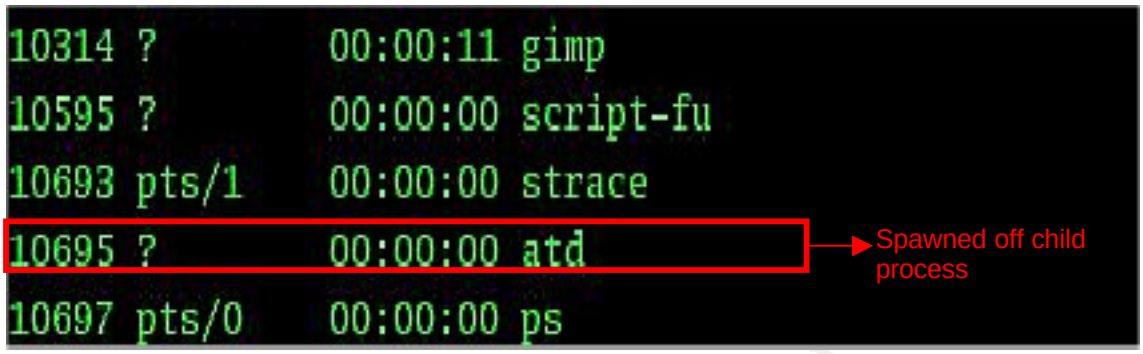

Figure 2. Screen Shot of the output from the ps –aux command.

I ran "strace" again this time with the –f option specified in order to follow the fork() call. The last line of the output was "read(3, ." This told me that the spawned off child process was waiting to receive input from some source. See Appendix A, pages 48-50 , for the complete output of strace."

While analyzing the output of strace, I paid particular attention to three system calls that the executable made. They were "socket(PF_INET, SOCKET_RAW, IPPROTO_ICMP) = 3." , "socket(PF_INET, SOCKET_RAW, IPPROTO_RAW) = 4.", and "setsockopt(4,SOL_IP,IP_HDRINCL,[1],4=0." The first two system calls each created a socket, which allow for network communication. One of the sockets used the ICMP protocol and the other one used the RAW protocol. After doing some research on the RAW and ICMP protocols I was able to conclude that the RAW socket is used to send data and the ICMP socket is used to receive data. I was able to conclude this based on information I found on RAW sockets from the website http://www.linuxchix.org/content/courses/security/raw_sockets. "A raw socket is a socket that takes packets, bypasses the normal TCP/IP processing, and sends them to the application that wants them" (http://www.linuxchix.org/content/courses/security/raw_sockets). In order to prove that this is the case I ran the program ping using localhost as the IP address. The ping program sends ICMP packets to the IP address specified. Once Ping was executed the line "read(3," began to fill with data.

The system call to setsockopt sets certain socket options. This system call was used on the RAW socket. The option I was interested in was the IP_HDRINCL. This option means that the binary had to create an IP header, append data, and then send the newly created packet to the specified address. Due to the fact that the unknown binary must create its own IP header it is possible that it could spoof its IP address.

After doing some more research on ICMP packets I learned an interesting fact

about them. The fact is that ICMP packets have a data field that isn't generally used and this field is a good place to hide data. Combining this new information with the information I have gathered so far I can conclude that the atd executable sits and listens for ICMP traffic on the compromised machine. When an ICMP packet arrives, it checks the packet for a certain format. If the packet meets the special format then the data field is read and the results are sent back to the hacker through the RAW socket. If the ICMP packet does not meet the special format then it is ignored and the binary waits for the next ICMP packet to arrive. For more information on the format of the ICMP packets that the unknown binary listens for, refer to the section below titled Format of the LOKI2 ICMP Packet.

Forensic Details

To determine if the binary was run on the system you could check the .bash_history file, which keeps track of all commands typed in the system terminal. The command "./atd" will be listed in this file if the hacker did not edit this file, and neither of the following commands were executed.

1. "unset HISTFILE" - will prevent Linux from writing the history data to the file.
2. "HISTFILE=/dev/null" – will instruct Linux to write the history data to a null device, which will result in the data being discarded.
3. HISTFILESIZE=0 – makes the history file have a maximum size of 0 bytes.

If the hacker used a shell other then BASH such as the C shell, TC shell, or Korn shell then the commands would be logged in a different file. In the C and TC Shell the default history file is called .history and is contained in the user's home directory. In the Korn Shell the default history file is called .sh_history. If the hacker used the Bourne shell then the commands would not be logged in a file.

Other files the executable uses when executed are "/usr/i486-linux-libc5/lib/libc.s0.5.3.12", "/lib/ld-linux.so.1.9.5", and "/dev/pts/1". The first two files I knew were accessed based on the output of the "ldd" command and by the fact that in order to run the atd executable I had to install these two libraries on my system. I was able to determine that the last file /dev/pts/1 will always be accessed by the executable based on the line "/dev/tty" returned from the command "strings."

When the binary is running it opens two RAW sockets, with one using the ICMP protocol. The socket using the ICMP protocol receives all of the incoming ICMP packets. To see these sockets you can run the command "netstat –ap." See Figure 3 on the following page for the output of the "netstat" command.

I executed the command "ps –u root" again and found the child process atd spawned off running. See Figure 4 on the following page for the abbreviated output of this command. Refer to Appendix A pages 50-54 for the complete output of this command as well as the output for the commands "nmap –p 1-

65535 localhost > nmap.aft", "nmap –p 1-65535 localhost –sU > nmap_udp.aft", and "netstat –ap > netstat.bef." These commands were executed after the atd executable was executed. Other leads that can be pulled out and researched further are the keywords LOKI2, lokid, and the string "© 1997 guild corporation worldwide".

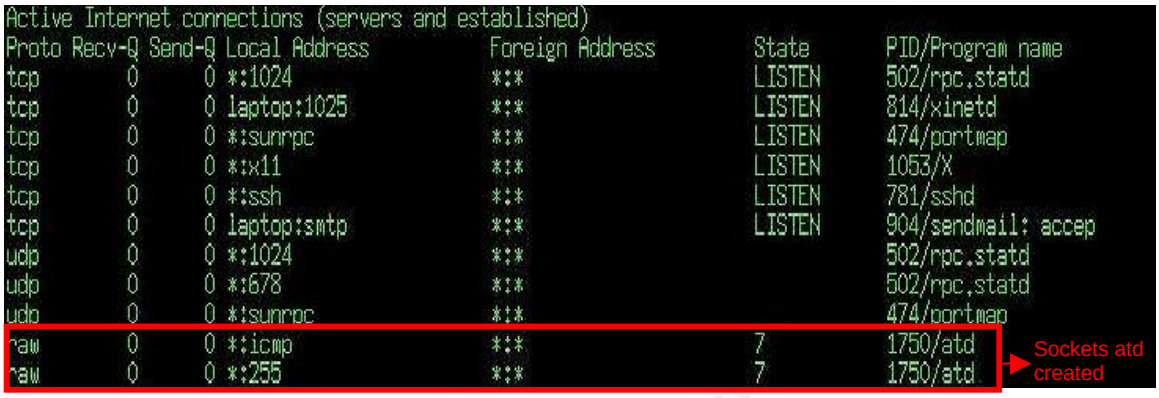

Figure 3. Output of netstat showing the two sockets atd creates.

```
1007 ?        00:00:47 gnome-terminal

10702 pts/0    00:00:00 ps
```

Figure 4. Abbreviated output of ps –u root showing the child process atd creates.

Program Identification

To locate the source code of the binary on the Internet I performed a search on the string "© 1997 guild corporation worldwide". I was able to locate the source code at http://www.phrack.org/show.php?p=51&a=06. I also came across the two words LOKI2 and lokid on this web page.

I downloaded the source code, commented out the line "DEBUG = -DDEBUG" in the Makefile in order to remove any debugging information built into the program and then tried to compile it. I came across two errors. After reading the error messages and finding the files where these errors were located, I was able to fix these errors.

The first error was in the icmp.h file located in the /usr/include/linux directory. To

fix this error I added the line “#include <asm/types.h>” right after the line “#define LINUXICMP_H.” This error was caused by using a variable type that wasn’t defined in any other file used by the program. The #include statement tells the compiler to look for undefined variables and functions in the file specified after the #include statement. In this case, the compiler was instructed to look in the asm/types.h file for undefined variables and functions.
The second error was located in the loki.h file. To fix this error I had to comment out the lines “#include<signal.h>”, and “#include<linux/signal.h>.” This error was caused by having a variable being redefined. This occurs when a file is included more than once in a program as was the case for the second error.

After fixing these errors I was able to compile the program. The next problem appeared when comparing atd to the program I just compiled. The newly compiled program was bigger then atd. I believe this is because the programs were compiled on different versions of Linux. To try to fix this difference I installed Red Hat Linux version 6.1. After recompiling the source code on this version of Red Hat I was able to obtain a smaller difference of 276 bytes. After more investigation into this problem I was able to come to the conclusion that the source of this difference is in the libraries each program uses, as well as the version of gcc installed. The unknown binary uses the libc.so.5 library where as the newly compiled binary uses the libc.so.6 library.

To prove that these programs are the same I took three steps. The first step was to compare the output of each when I used the client with each program. Running each program with “strace”, I was able to obtain their output when executing an “ls” command from the client. The output for both programs was the same and it was “read(3, E\0\0T\254~\0\0@\1\320(\177\0\0\1\177\0\0\1\0\0\20\221"..., 84) = 84.” See Appendix A pages 55-57 for the output of Strace.

The second step was to execute each binary and run the command netstat to look at the sockets each one creates. The output of the netstat command shows that both programs create the same two sockets. See Figure 4 below for the output of the netstat command.

```
Active Internet connections (servers and established)
Proto Recv-Q Send-Q Local Address           Foreign Address         State       PID/Program name
tcp        0      0 *:1024                  *:*                     LISTEN      406/rpc.statd
tcp        0      0 localhost.localdom:1025 *:*                     LISTEN      600/xinetd
tcp        0      0 *:sunrpc                *:*                     LISTEN      387/portmap
tcp        0      0 *:x11                   *:*                     LISTEN      818/X
tcp        0      0 *:ssh                   *:*                     LISTEN      586/sshd
tcp        0      0 localhost.localdom:smtp *:*                     LISTEN      624/sendmail: accep
udp        0      0 *:1024                  *:*                                 406/rpc.statd
udp        0      0 *:sunrpc                *:*                                 387/portmap
raw        0      0 *:icmp                  *:*                     7           10639/lokid6.1
raw        0      0 *:icmp                  *:*                     7           10637/atd
raw        0      0 *:255                   *:*                     7           10639/lokid6.1
raw        0      0 *:255                   *:*                     7           10637/atd
```

Figure 4. Output of netstat showing the two sockets atd creates and the two sockets lokid creates.

The last step was to run strings on both programs and compare the output. The comparison of the outputs shows that the two programs are nearly identical. For example, the strings “lokid: Client database full”, and “lokid –p (I|u) [-v (0|1)]” appear in both outputs. The differences between the two programs were from using different libraries. Refer to Appendix A pages 57-63 for the complete output of the “strings" command on these files.

Format of LOKI2 ICMP Packet

With further examination of the source code I was able to determine the format of a valid LOKI2 ICMP packet. In an ICMP packet there are six different fields. They are type, code, checksum, identifier, sequence number, and data. In the LOKI2 source code a check is done on the information stored in three of these fields. The type field is checked for one of the following values:

- if the application is compiled on a NET/3 kernel then the field is checked for the value ICMP_ECHOREPLY.
- if the application is not compiled on NET/3 kernel then the field is checked for the value ICMP_ECHO.

The sequence number field is checked for the hexadecimal number of 0xF001. The last check is done on the first byte of the data field. This byte can be one of the following three hexadecimal values:

- If the value is 0xb1 then it is a standard request packet.
- If the value is 0xd2 then the receiver should quit.
- If the value is 0xa1 then it is a public key request packet.

Conclusions

Based on my analysis of the atd executable that was found on the system I was able to conclude that the purpose of the atd executable is for the covert communication of data from one PC to another. This binary known as lokid is also known as an information-tunneling program and the way it communicates is through ICMP packets. Normal ICMP packets have an empty data field and this is the field LOKI2 hides it’s data in. The client side of LOKI will generate an ICMP packet with the format mentioned above in the section titled Format of the LOKI2 ICMP Packet.

In order for this binary to run it must have root access to the system. Once installed on the system a user using the client side of the program can send commands to manipulate the compromised machine. For instance, sending the “ls” command to the server will display a listing of the root directory. With this covert capability the user can create scripts to run on the compromised host that will capture all keystrokes, and even save all email messages. In order to determine if LOKI2 has been installed and is running on a system a user can use

the netstat command to look for open raw sockets. The only way to stop this program from communicating is to have a firewall set up to block all ICMP traffic from entering and exiting the network.

Legal Implications

If I was able to prove that this binary was executed on a "protected computer", which is a U.S. government system, financial institution system, or a system that "affects interstate or foreign commerce or communication of the United States" (Salgado, p. 1-15), and that the subject caused "damage" to the system then the person who executed it is in violation of The Federal Computer Fraud & Abuse Act.

A system is "damaged" if one of the following occurs: if changes were made to the system by the subject and those changes resulted in a loss of $5000 or more, "caused physical injury to any person" (Salgado, p. 1-15), "caused a threat to public health or safety" (Salgado, p. 1-15), or "damaged any computer used by the government in the administration of justice, national defense, or national security" (Salgado, p. 1-15). The penalty for violating this law depends on the type of damage done to the system as well as the intent of the intruder. If the subject "knowingly causes the transmission of a program, information, code, or command to a computer…" (Losey), and intentional damage is caused to a protected computer then the subject has committed a felony that carries a fine and a maximum of ten years imprisonment for first time offenders. For repeat offenders the penalty rises to a fine and a maximum of twenty years imprisonment.

If the subject gained unauthorized access and "as a result of such conduct recklessly causes damage" (Salgado, p. 1-19) to the protected computer then the subject may be charged with a felony that carries a fine and a maximum of five years imprisonment for first-time offenders and for repeat offenders the penalty rises to a fine and a maximum of twenty years imprisonment. If the subject gained unauthorized access and caused intentional or unintentional damage then the subject may be charged with a federal misdemeanor that carries a fine and a maximum of one year imprisonment for first-time offenders and for repeat offenders the penalty rises to a fine and a maximum ten years imprisonment.

I could not determine if this program was actually executed on the system because the creation, modified, and accessed dates and times were all the same. The access time is the most important. This date tells us when the program was last executed. Because this date and time is the same as the others this leads me to believe that the program was never executed. I also looked in the history file for commands that were previously executed but I found no reference to this program in the file.

I determined that no laws have been broken, but that the user has violated

Northrop Grumman's acceptable use policy by having a tool installed on a system that allows for the covert communications of data as well as for opening a back door to the computer. This program is an information-tunneling program designed to get past firewalls that allow incoming ICMP packets.

Interview Questions

If I were able to interview the suspect, I would divide my questions into five groups. The first group of questions would contain questions pertaining to the suspect's computer skills. For instance, does the suspect know how to program? The second group of questions would focus on the suspect's hacking interests. The third group of questions would be directed towards the compromised system. This group of questions would involve questions pertaining to LOKI and the suspect's knowledge of LOKI. The fourth group of questions would pertain to the date of the compromise and the suspect using the compromised machine. The last group would consist of only one question: Did you install LOKI on the compromised machine?

The first group of questions would be designed to get a feel for the suspect's computer skills. Some of the questions I would ask would be:

- Do you use a computer often?
- What type of Operating System do you most often use?
- What types of activities do you do on the computer?
- Do you like to surf the Internet?
- If so, what types of websites do you visit?
- Do you know any programming languages or scripting languages?

After getting a feel for the suspect's computer skills I would want to know if the suspect has ever used any hacker tools. To determine this I would ask the following questions:

- Have you ever visited any hacker websites?
- Are you interested in hacking?
- Have you ever experimented with hacker tools?

I then would ask the suspect about the hacker tool called LOKI2. The questions I would ask are:

- Do you know about the program called LOKI2?
- If so, have you ever used it before?

The next stage in my questioning would be to ask about the compromised machine. I would ask the following questions:

- Were you using this system on August 22,2002?
- Do you normally use this system?
- Are you allowed to run programs as root or log on as root?

- If you were not supposed to log on as root, why did you and how did you gain access?

To end the interview I would ask the suspect if he installed the binary called atd on this system.

Additional Information

- http://www.phrack.org/show.php?p=51&a=06 is a link to an article that discusses LOKI2 and its implementation. The source code can be downloaded from here.
- http://www.onlamp.com/lpt/a/749 is a link to a web page containing information on the ICMP packet format.
- http://www.iss.net/security_center/static/1452.php is a link to a web page discussing LOKI2.

Part 2 – Option 1: Perform Forensic Analysis on a system

Synopsis of Case Facts

The hard drive that was being investigated was given to me by a friend from work who found the hard drive in a dumpster that was located in an apartment complex in Herndon, Virginia. This investigation focused on what the system was being used for. For example, was this hard drive from a personal computer or from a business computer? If this is a personal computer what are some of the user's hobbies? If this is a business computer what is the user's profession? I would also like to determine what types of applications were installed on this system. Was an Internet connection available? If so, what websites did the user visit? I analyzed the programs and files stored on this hard drive in order to answer these questions.

This part of the document is broken into two sections. The sections titles are System Description, and Media Analysis of the System.

System Description

The hard drive was found by itself, so the type of system that it was originally installed in was unknown. It is also unknown as to what it was used for and the type of operating system, if any, was installed on this drive. Below is the hardware description of the hard drive.

Tag #	Description
01	Samsung WU32543A Hard Drive, Serial #: J3XHB42456 Size: 2.54GB

The hard drive was a 3.5 inch IDE drive and was manufactured in 1997. I was able to estimate the year to be 1997 based off a datasheet detailing the specifications of the drive, which was found at http://www.samsung.com/Products/HardDiskDrive/OldModels/downloads/wu32543a.pdf. The drive looked to be in good condition.

Media Analysis of the System

This section is divided into nine subsections. They are: Forensic Tools Used, Image Media, Hardware/Software of the System, Modification to OS Configuration and Files, File Analysis, Internet Usage, Timeline, Recovery of Deleted Files, and Keyword Search.

Forensic Tools Used

The analysis system that I used was a dual boot machine of Windows XP and Red Hat Linux 8.0. The system had a 20 GB Maxtor hard drive, 10 GB Western Digital hard drive, a floppy drive, a zip drive, a CD-ROM drive, and a CD burner. The 10GB hard drive contained the Linux operating system as well as a 2GB Fat32 partition. The processor of the system is a 1 GHz Athlon and it had 256MB of PC-133 RAM. This system was not connected to a network.

The forensic tool I decided to use was Autopsy version 1.62. I chose to use this tool because it is a proven forensic tool that can be used in Linux. Autopsy uses the tools provided by Task version 1.52 and it provides a nice graphical user interface through a web browser. Some features of Autopsy are its file browsing capability, keyword searches, and recovery of deleted files. These tools can be downloaded at http://www.atstake.com/research/tools/autopsy/, and http://www.atstake.com/research/tools/task/. Before running Autopsy some configuration steps must take place. Those steps are:

1. Installing Task Version 1.52.
2. The directory that contains Task and the directory that contains the image must be specified to Autopsy.
3. Configuring the fsmorgue file located in the directory where the image file is located.

Another tool I used in my analysis of the system was a Windows based tool called IeHistory. This tool allows you to view the contents of Internet Explorer history files as well as the INFO and INFO2 files contained in the Recycle Bin of

Windows based computers. This tool can be found on the SANS Institute Track 8 CD.

The last tool I used in my analysis was the MS-DOS based tool called RegView. This tool can be downloaded at http://sac-ftp.externet.hu/utilmisc21.html. RegView allows you to view the registry files of Windows 95 and 98 computers. To use this tool I ran it from a command prompt in Windows XP.

At the end of this document I proved that Autopsy did not alter the image by generating a new md5sum of the image and comparing it to the md5sum of the hard drive from above. I also proved that IeHistory and RegView did not alter the files by generating an md5sum of all files I extracted from the image before using the tools and then generating another md5sum of the files when I finished using the tools.

Image Media

To obtain a bit-by-bit copy of the hard drive I installed the hard drive as a slave drive on my system, which ensures the drive won't be written to. There are two different possible times when a hard drive can be written to. One is during the boot process and the other is by the operating system. In order for a drive to be written to during boot up, it must be the active drive and it must be the drive the operating system is stored on. In this case, it is neither. For the second possibility, an operating system can only write to a drive if the drive has been mounted. With Red Hat Linux 8.0, which is the operating system that I was using, a slave drive won't be mounted unless the user issues a command to mount the drive. I did not issue a command to mount the drive, therefore the drive was not written to.

After booting into Linux, I used the program Fdisk, which is used to display the type of file system on a hard drive, to determine the location of the hard drive. Next I used the Linux utility DD, which is a utility that creates a bit-by-bit copy of a drive, to create the image. To ensure the integrity of the data on the hard drive while using Fdisk I only issued the command p, which will print out the type of file system of the drive and doesn't attempt to write to the drive.

The DD command I typed was "dd if=/dev/hdc1 of=HDC1.img bs=1024." Once the image was obtained, I calculated the md5sum of both the hard drive and the image. The results showed that the image and the hard drive were identical. Refer to Figure 5 on the following page for the output of the md5sum command.

Figure 5. Md5sum of hard drive and image

After creating the image I wanted to determine how much undeleted data existed on this hard drive. To determine this I mounted the image with the following command: "mount –o ro,loop,nodev,noexec,nosuid,noatime /root/GIAC/HDC1.img /mnt/Image." I then ran the command "df –H," which will output the amount of space used on the hard drive as well as the total size of the hard drive. The total size of the hard drive was 2.54 GB and the amount of used space was 2.43 GB. Subtracting the total size of the hard drive from the amount of used space I was able determine that the amount of free space left on the hard drive was approximately 110 MB.

Hardware/Software of the System

Since the hard drive came from an unknown system and was in an unknown state, I began my analysis by trying to gather some background information of the contents contained on the hard drive. Some questions I wanted to answer included the type of operating system installed on the hard drive (if any), the type of hardware installed on the computer, and if there was an Internet connection. I began answering these questions by using the utility Fdisk to determine how the drive was partitioned. By executing "Fdisk /dev/hdc" under Linux and using the p command from within the Fdisk main menu, I was able to determine that there was only one partition on this drive and it was formatted with the Fat32 file system, which is the file system that is typically used in Windows 95 and Windows 98 operating systems. After determining the type of file system, I was able to configure Autopsy's fsmorgue file. I configured this file by adding the following line: "HDC1.img vfat C: EST5EDT." I was then able to use Autopsy's file-browsing capability to answer the questions I mentioned above. The file-browsing feature of Autopsy allows one to view the contents of the image as if it were an actual drive installed on a system. This feature also displays files that the user has deleted and allows for the extraction of any file. To access the file-browsing mode of Autopsy, select File Browsing from the main menu of Autopsy. See Figure 6 below for a screen shot of Autopsy's main menu.

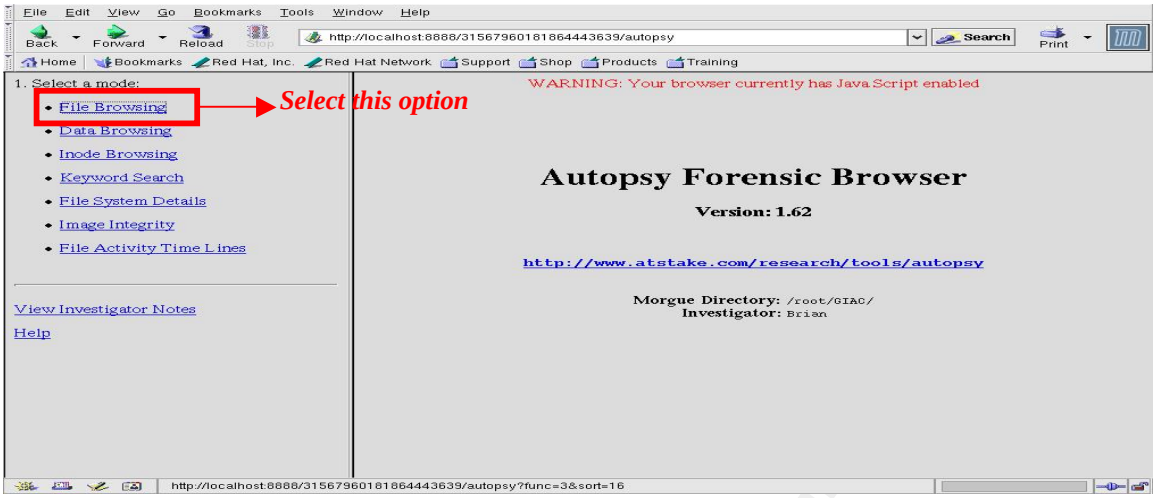

Figure 6. Screen Shot of Autopsy's Main Menu.

After selecting the File Browsing link, the screen shown in Figure 7 will be displayed. Select the image you want to use and push the button "Begin Analysis." A screen similar to the one in Figure 8 will be displayed.

Figure 7. Screen Shot of Autopsy's Select Image Function.

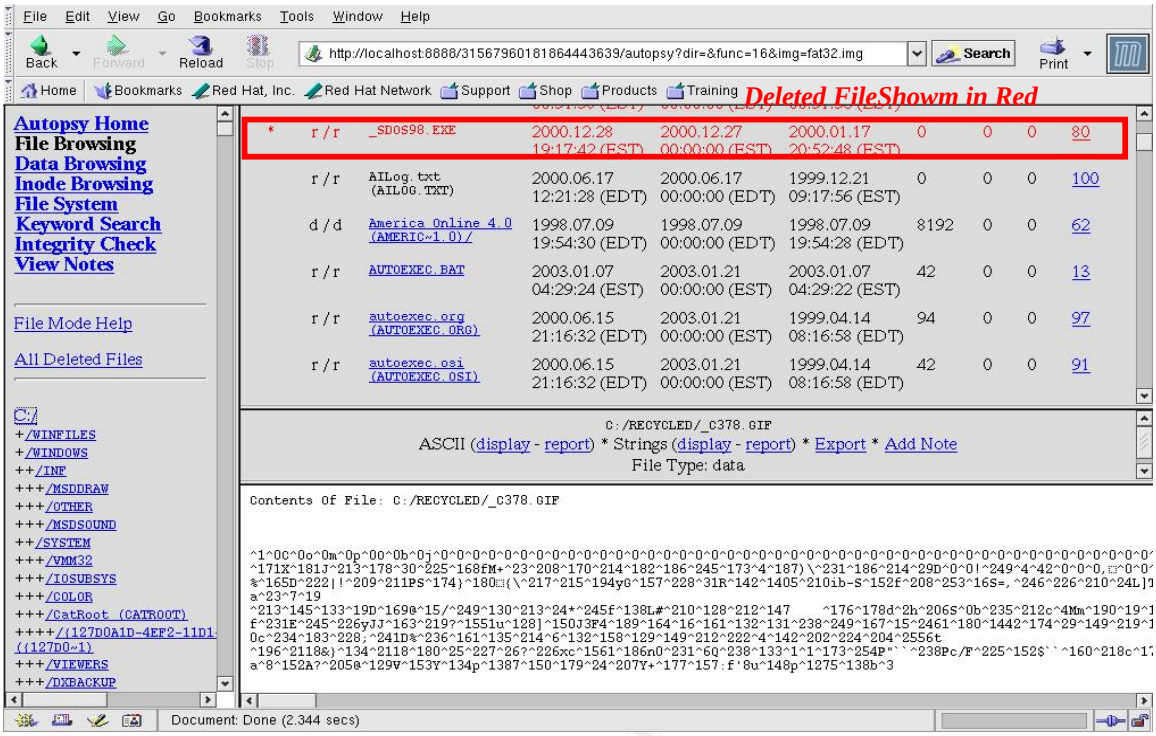

Figure 8. Screen Shot of Autopsy's File Browsing Mode.

Through browsing the files on the hard drive I was quickly able to determine that the operating system on this drive was Windows. I was able to determine this because of the directory called Windows that was located in the root directory of the image. I was further able to determine that it was Windows 95 by examining some of the system files I found in the root directory. For example, in the setuplog.txt file on lines 165-193 the following reference is made: "CL: Windows 95 CD-ROM..." There was also a directory called winfiles and contained within this directory was a file called readme.txt that had the following line "Microsoft Windows 95 README for Microsoft Windows." After further examination of the setuplog.txt file I was able to determine what optional software components were installed on this system. Some important ones were communications, HyperTerminal, and Dial-Up Networking. These three components told me that there was probably an Internet connection available via a modem. I was also able to determine through the setuplog.txt file that there were three drives on this system. There was drive A, which was the floppy drive, drive C, which was the hard drive, and drive D, which was the CD-ROM drive.

To find out what hardware was located in this system I copied the two registry files, System.dat and User.dat, to the Fat32 partition. To copy these files I mounted the image that I created of the hard drive in Linux using the command "mount –t vfat –o ro,loop,nosuid,noexec,nodev,noatime /image/HDC1.img /mnt/image." I then used the md5sum command to generate an md5sum of these files. The resulting md5sum for the System.dat file is caa0f7a5b69ac4c205c5e122ab0c661e and the md5sum for the User.dat file

is17d6965532a7229a7cc46e6aa46ad88b. I copied these files to the Fat32 partition and I made them read only. I booted into Windows XP, opened up a command prompt and used the MS-DOS based tool RegView to view the contents of the System.dat file. I started with this file because this is where the configurations for the hardware devices located on the system would be found. I used the tool RegView because a registry file is stored in a certain format that a normal text editor isn't able to read. The tool RegView is able to read the format and thus display the contents of the registry files. The command line to use this tool is "RegView System.dat." See Figure 9 below for a screen shot of this program.

From the System.dat file I was able to determine that the user had two printers. One was an Epson Stylus COLOR ESC/P 2, and the other was HP LaserJet III. I was also able to determine that the user was using a data/fax modem manufactured by Lucent and installed on the port COM 3. Some other hardware information that I found was that the user had an Intel Pentium II processor, a 3Com EtherLink III ISA (3c509/3c509) card, and a 3dfx Voodoo3 video card. I was also able to find out the BIOS of the motherboard was AWARD version 4.51 with a date of 09/03/97.

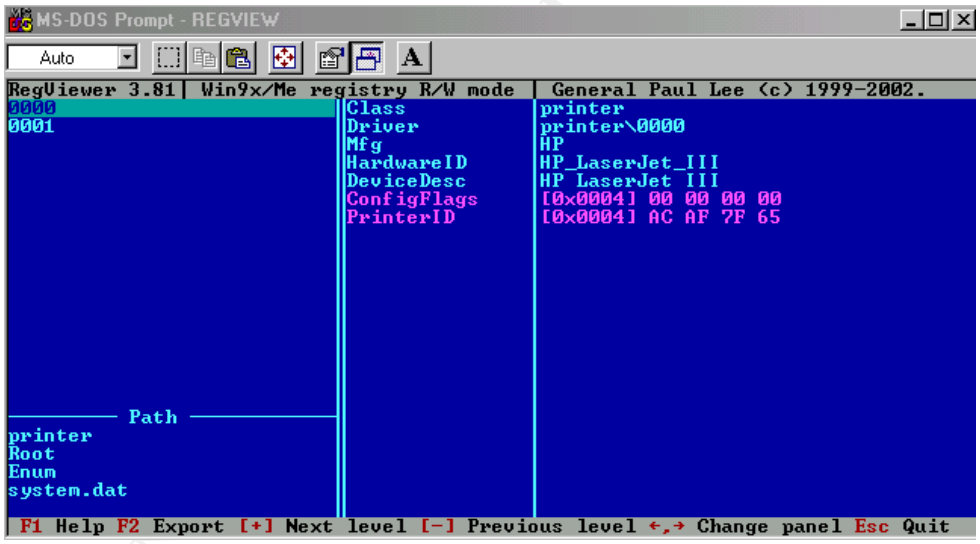

Figure 9. Screen Shot of RegView.

To find what software the user was using I looked in the other registry file, User.dat file, and in the directory Program Files. To view the contents of the User.dat file I again used the tool RegView, but this time the command line was "RegView User.dat." To view the contents of the Program Files directory I booted back into Linux and used the File Browsing feature of Autopsy. The following is a list of programs followed by a brief description found in the User.dat file.

- Adobe Acrobat Reader v 4.0 is a program used to view PDF files.

- AllAdvantage is a program that will pay you for each hour you have its advertising window open while you are using the Internet.
- America Online is a popular ISP.
- AOL Instant Messenger is a popular chat program. I also located all the screen names the user used for this program. They are dragon0793, jnnice66, zoe244, cowpony815, deftones1786, pistoff85, and griffenob.
- Mjuice Media Player is a media player capable of different kinds of media files. Today Mjuice is an mp3 store, where a user can download mp3s. It is now known as Artist Direct.
- GopherGolf is a game developed by BB Software.
- Battle.net is a gaming service. According to the web page http://www.battle.net/intro.shtml, " Battle.net provides an arena for Blizzard customers to chat, challenge opponents and initiate multiplayer games, at no cost to the user" (http://www.battle.net/intro.shtml).
- GIFmation is a tool, developed by BoxTop Software, used to create GIF animations. More information on this tool can be found at http://www.boxtopsoft.com/gifmation.html.
- Rugrats Adventure Game is a game developed by Broderbund Software.
- Dungeon Keeper II is a game developed by Bullfrog Productions Ltd.
- MindRover is a game developed by CogniToy.
- Tomb Raider IV (Demo) is a game developed by Core Design Software.
- Majesty is a game developed by Cyberlore Software.
- ESCAPEplay is a program developed by Eidos Software. This program allows a user to play .RPL files. These files are movie files contained within a game.
- Snes9X is a Super Nintendo emulator.
- GIFMovieGear is a program developed by Gamani Software. This program allows you to animate gif files. More Information on this program can be found at http://www.pipesupports.com/Nowledge/IT/Graphics/MoviGear.htm.
- Test Drive 6 is a game developed by Infogames Software.
- Paint Shop Pro developed by Jasc Software is a powerful graphics program that allows a user to edit graphic files.
- EditPad Lite is a text editor developed by Jan Goyvaerts.
- Army Builder is a game developed by Lone Wolf Development Software.
- Shockwave 8 is a program developed by Macromedia. According to the web page http://www.macromedia.com/software/shockwaveplayer/, this program "displays Web content that has been created by Macromedia Director Shockwave Studio"(http://www.macromedia.com/software/shockwaveplayer/).
- Sonique developed by MediaScience is an audio player and an mp3 encoder.
- Magic: The Gathering is a card game developed by Crystal Keep.

- ICQ is popular chat program developed by ICQ Inc.
- mIRC is an IRC chat client.
- Netscape Navigator is an Internet Browser.
- Winzip is a file compression utility developed by Winzip.
- Thing Maker developed by Parable is a program according to the web page http://www.infotoday.com/it/dec98/article3.htm that "…will be able to lock, copyright, bill, and, well, treat the Web much the way we have treated print" (http://www.infotoday.com/it/dec98/article3.htm). Thing Maker also allows for easy creation of animation objects.
- Soldier of Fortune is a game developed by Raven Software.
- Real Player is a multimedia player developed by RealNetworks.
- Half-Life is a game developed by Sierra.
- FakeSurf is a program that simulates a person surfing the Internet. This program was most likely used when the user had the AllAdvantage advertising window on.

The following is a list of programs and their description that I found in the directory C:\Program Files.

- MechWarrior 2 is a game developed by Activision Studios.
- Sid Meier's ALPHA CENTAURI is a game developed by Firaxis Games Inc.
- The Driver Demo is a game developed by GT Interactive.
- Gangsters Demo is a game developed by Hothouse Creations.
- LEGO Island is a game developed by LEGO Software.
- McAfee is a well-known virus scanner developed by McAfee Security.
- Age of Empires is a game developed by Microsoft.
- 3D Movie Maker is an application, developed by Microsoft, which creates 3D animated movies.
- Mplayer is a utility for users who play games. More information on this program can be found here http://www.gamespyarcade.com/features/
- MSWorks is a program developed by Microsoft that allows a user to create text documents, spread sheets, etc…
- Napster was a very popular program that allowed a user to download mp3s from another user's computer. Napster is no longer available.
- Warzone 2100 is a game developed by Pumpkin Studios.
- QuickTime is a multimedia player developed by Apple.
- Tom Clancy's Rainbow Six is a game developed by Red Storm Entertainment.
- Cat.exe is an application that displays a cat on your desktop. When you click on the cat the mouse can move the cat around. ScreenMates developed this

application.

- Starcraft is a game developed by Blizzard Entertainment.
- West Front Demo is a game developed by TalonSoft.
- The Red Odyssey Demo is a game developed by Macmillan Digital Publishing USA.
- TI-Graph Link 83 Plus is a utility for a TI-83 Plus, which is a graphing calculator manufactured by Texas Instruments. This utility allows you to send and receive files from the computer to the TI-83 Plus.
- VivoActive PowerPlayer is a program developed by RealNetworks and according to the web page http://www.real.com/vivo/index.html "…lets you save and playback audio and video content from the Web" (http://www.real.com/vivo/index.html).

After finding most of the programs installed on this hard drive I wanted to find out what programs were started once Windows booted up. To find this information I went to two places: C:\WINDOWS\Start Menu\Program\Startup and in the run field contained in the registry. The run field can be viewed by using the tool RegView. I booted back into Windows XP, opened a command prompt and ran RegView to view the run field contained in the User.dat file. In this field there was only one program that was started and it was AIM (Aol Instant Messenger). I booted back into Linux and used Autopsy's file browsing feature to view the contents of the directory C:\WINDOWS\Start Menu\Program\Startup. The programs that I found in this directory were America Online Tray, Iomega Disk Icons, Iomega Watch, Mount Safe & Sound Volumes, MSN Quick View, and PowerReg Scheduler. The Iomega reference leads me to believe that the user also had a zip drive installed on this system.

After gathering all the information required from the files User.dat and System.dat I recalculated the md5sum for each file and I obtained the same results as I did above.

Modification to OS Configuration and Files

Now that more was known about the hardware and software installed on this system, I began to look for any modifications that had been done to the operating system files and configuration. To do this, I needed to see when a file was last modified or determine if any operating system files had been deleted. I again used Autopsy's file-browsing capability to accomplish this. I began this part of my investigation by searching the C:\Windows\System directory to check the modified dates of certain DLL's that Windows 95 uses. For example, I checked Kernel32 dll, and User32 dll. The modified dates on both of these were the same as well as all other major DLL's that Windows uses. I also looked in the sysbackup directory, which is where Windows 95 keeps backups of important DLL's, and I found no modifications to these DLL's as well. The next directory I wanted to check was C:\Windows\COMMAND. This is the directory where

Windows keeps many of its executables that it uses on a regular basis. Again, there were no modifications made to the files in this directory. I did however find a deleted file called _ET7221.TMP. I viewed this file in Autopsy's ASCII viewer and I discovered that this file was a Portable Executable (PE), which is a windows executable file. To view this file in Autopsy's ASCII viewer click on the file and look in the bottom pane for the output. See Figure 10 below for a screen shot of the ASCII viewer.

I then performed a strings analysis on the recovered file using Autopsy and this analysis revealed that the file was called Cscript.exe. Cscript is a Windows utility that allows you to run scripts from a command line. I extracted the deleted file by pressing the extract link in Autopsy and decided to further investigate the file because there was already a Cscript.exe file in the COMMAND directory. Both of the files had the same modified date of 7/29/1999 and a time of 19:23:32. I calculated the md5sum's of both files and found that they both had an md5sum of 030ae1a74aca824bbb4e2f2803a83f9f, which indicates that both of the files are the same.

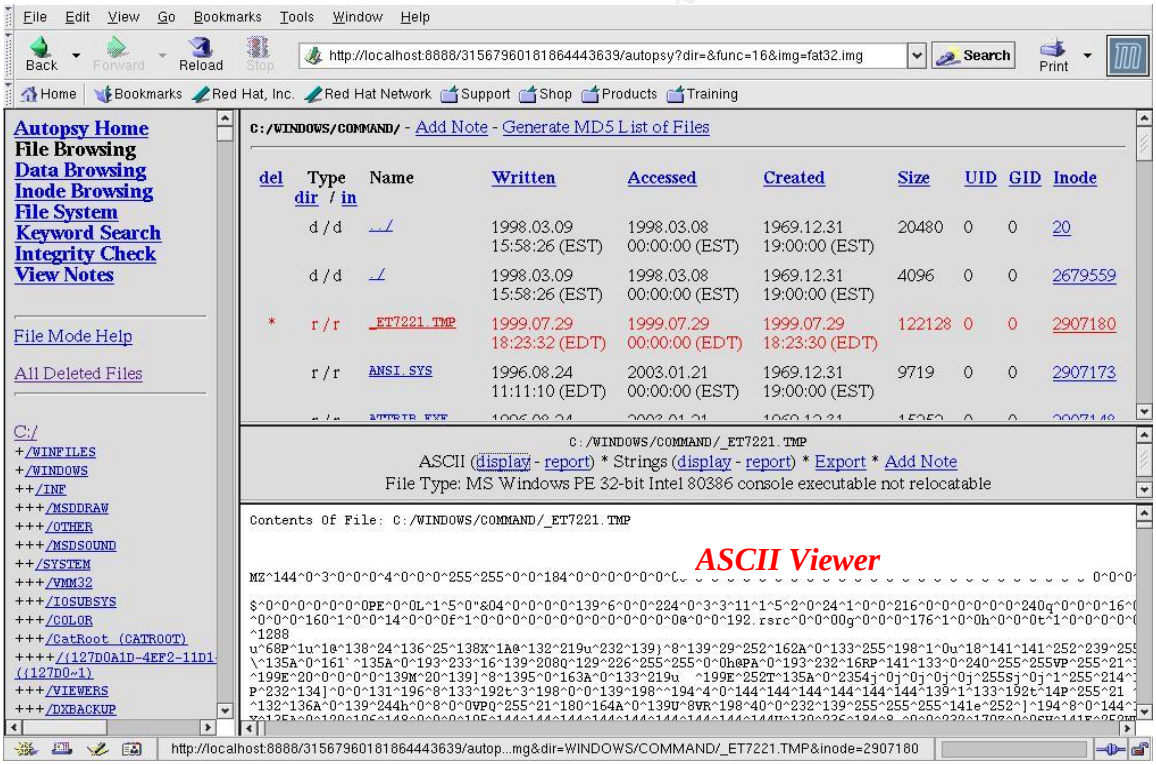

Figure 10. Screen Shot of Autopsy's ASCII Viewer.

In the Active Setup LOG.BAK file located in the C:\WINDOWS directory, I was able to determine that on July 29, 1999 at 18:10:32 Internet Explorer was updated from version 4.70.0.1215 to version 5. This was the only update to the operating system software that I was able to find on the hard drive.

File Analysis

After finding only the one update to Internet Explorer I began looking at all the files contained on the hard drive. Again, I used Autopsy's file-browsing capability to do this. I started in the root directory and I came across a deleted file called "_ONFIG.!~!." I recovered this file by pressing the Export link in Autopsy and found that it contained the following line: device=c:\oakcdrom.sys /d:mscd000. See Figure 11 for a screen shot of exporting a deleted file.

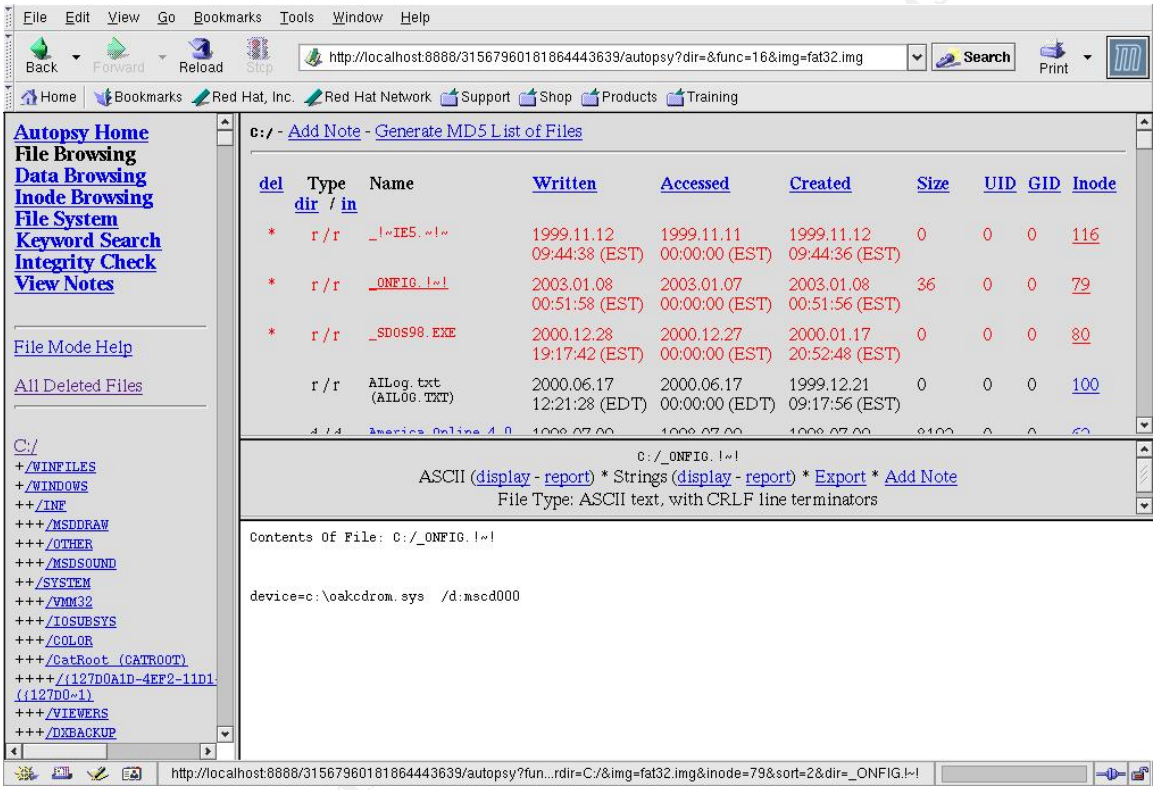

Figure 11. Screen Shot of Autopsy's Export Function.

I assumed that this file was originally called Config.sys so I compared this file to the undeleted Config.sys file. I found no difference between the files. While looking at the system files I noticed several files of the same name, but with a different extension. The names of the files without their extensions were autoexec. With further examination of these files, I was able to conclude that the user might have had some trouble with their CD-ROM drive.

The first file autoexec.org contained three lines:

- PROMPT PG. This displays a DOS prompt.
- PATH=C:\WINDOWS;C:\WINDOWS\COMMAND. This line is used by Windows to look for certain files.
- LH C:\WINDOWS\COMMAND\MSCDEX.EXE /D:MSCD000. This line is used

to load the CD-ROM drive in upper memory.

The second file autoexec.osi contained only one line which was rem C:\WINDOWS\COMMAND\mscdex /d:mscd000. This line was the same as the third line in the file above except for the rem. The rem command prevents this line from loading when the computer is booted up.

The last file is called autoexec.syd and it contained one line that was the same as the third line in the first file.

Since all three of these files had the same name but different extension, I decided to look at the autoexec.bat file. This file contained the line "rem C:\WINDOWS\COMMAND\mscdex /d:mscd000." Which meant that every time the computer booted up the CD-ROM driver was not loaded. This could be because the user installed a zip drive and the CD-ROM drive was moved to a different drive letter or taken out of the system all together.

I found 23 *.chk files, which are files scan disk creates when it recovers data. This recovery usually takes place when the computer was not shutdown properly. Examination of these files revealed several URL's that the user visited.

In the file FILE0003.CHK I found out that the user searched for nude photographs of Marilyn Monroe. I was able to determine this by two URL's I located within this file. They were http://www.nudecelebsearch.com/celebs/Marilyn_Monroe.shtml, and a yahoo search URL http://search.yahoo.com/bin/search?p=marilyn+monroe+boobs

In the file FILE0007.CHK I found out that the user downloaded Napster, a popular software tool that was used for downloading mp3s. I also found many links to http://www.hotlinehq.com/, which seems to be some sort of search engine. I was unable to find this information because I could not gain access to the site.

In the file FILE0015.CHK I noticed that the user may have purchased the books "School of Wizardry (Circle of Magic, No 1)", and The Prisoners of Bell Castle (Circle of Magic, No 5) at http://amazon.com/.

In the file FILE0016.CHK I found a reference to one of the user's AOL screen name's. That name is "GriffenOB". I also found a link to http://reid.simmons.net/. This website is developed by a person named Reid Simmons. This site contains pictures of him, his writings, and quotes that different people have submitted. I also found a link in the file FILE0016.CHK to what could be the user's homepage. The URL was http://www.griffen.isonfire.com, but the page could not be found when I tried to access it.

The next file I looked at was a winzip log file called WINZIP.LOG, which

contained all commands winzip executed. Looking through this log I found some references to what looked like computer games as well as what looked to be like hacker tools. The names of the hacker tool files were tonegen.zip, boxtones.zip, phmas10.zip, superd.zip, SOHA.zip, and tlo31.zip. All of these zip files were in a folder on the desktop called Hacking. Since I haven't heard of any of these tools I decided to research them on the internet in order to find out what they are used for.

The program tonegen is a program that generates a tone at a frequency of 2600 Hz. Generating this tone allows somebody to trick the telephone system into believing that money was already inserted and allow the caller to make a free phone call. This program was written in Turbo Pascal and the last modified date was May 20, 1989. The author of this program is RADical KICK Ass Productions, a.k.a RKA. This file can be downloaded from http://www.parallaxresearch.com/files/pc/phreak/.

The program tl031 is a wardialer also known as the "little operator." The author of this tool is unknown and the last modified dates of these files were not consistent. This file can be downloaded from http://www.parallaxresearch.com/files/pc/scanners/.

The program superd, or super dialer, is also a wardialer. The author is Evan Anderson and the program was compiled with Quick Basic 4.50. The last modified date was December 22, 1990. The file SOHA.zip is included with this program. This file contained one file called Soha.app. I was unable to determine what type of file this was. This file can be downloaded from http://www.parallaxresearch.com/files/pc/scanners/.

The program phmas10 is another wardialer. The author is unknown and the last modifed dat is January 2, 1993. This file can be downloaded from http://www.parallaxresearch.com/files/pc/phreak/.

The last program boxtone is a tone generator developed in 1993 by „SyneTek Security, Inc." This file can be downloaded from http://www.parallaxresearch.com/files/pc/phreak/.

In the C:\Windows directory I found a file called dialer.ini which contained a phone number that was last dialed. The number was 703-854-1800. I also found a file called reginfo.txt in this directory. This file gave all of the user's information. The user's name that this version of Microsoft Windows 95 is registered to is Thomas E. O'Brien. His address is 909 Third Street Herndon Va, 20170. His phone number is 703-478-3566.

In the C:\WINDOWS\temp directory I found temp files for a game called "Kingpin: Life of Crime" developed by Xatrix Entertainment, Inc. I found a file called Aol.ini, which contained the following line "Password="BRIDGE-BEEN." I don't think this

is the user's password, but I do believe it is the password given when someone first signs up for AOL. I found a file called wks21A0.TMP, which was an ASCII file written in Spanish and was signed by a person with the name of Griffen 0'Brien. I found a file called wks90B2.TMP, which was a file that contained a reference to Andrew Carnegie. I found a file called wks60B5.TMP, which contained part of a story possibly written by the user. I found a file called wks6181.TMP, which contained a report about cleaning up the pollution of the earth. The common theme among these files is that they all seem to be assignments given at school. After investigating the wks portion of the file name I was able to come to the conclusion that these files were created with the Microsoft Works program. I performed a keyword search using a main word in each document in order to try to locate the original files. I was able to locate the original files for wks21A0 file, which is called tarea.de.espanol.wks, and the file wks6181.TMP, which is called Englishletter.txt. Both of these files were located in the directory C:\WINDOWS\DESKTOP. The file English letter.txt was a file written again by Griffen O'Brien for his ninth grade honors English class. To view the text of all these files see Appendix B, pages 64-66.

In the directory C:\My Documents I found an email file called wozoo.htm from Beth.Bartos@swfwmd.state.fl.us with a subject of "Executive Summary – Engaging The Next Generation: How Non-profits Can Reach Young Adults." This email is about getting young adults between the ages 18-24 to volunteer in their communities. To view the contents of this email see Appendix B, pages 67-75.

The next directory I looked at was the Recycle Bin. I found two files in this directory called INFO and INFO2. To view these files I booted into Windows XP and used the IeHistory program. This tool was used because of its ability to read INFO and INFO2 files. Before I booted into Windows XP I calculated the md5sum for both of these files. The md5sum for the INFO file was 2c0f28f490250565618df69192292df8 and the md5sum for the INFO2 file was 6b467c588be40cc-df492df4a5f914977. I booted into Windows XP and ran the program IeHistory. See Figure 12 below for a Screen Shot of this program. The INFO2 file was empty and the INFO file had a reference to one deleted file with the name of C:\WINDOWS\DESKTOP\-lasers\nhj. I then recalculated the md5sum of both files and I obtained the same results as above.

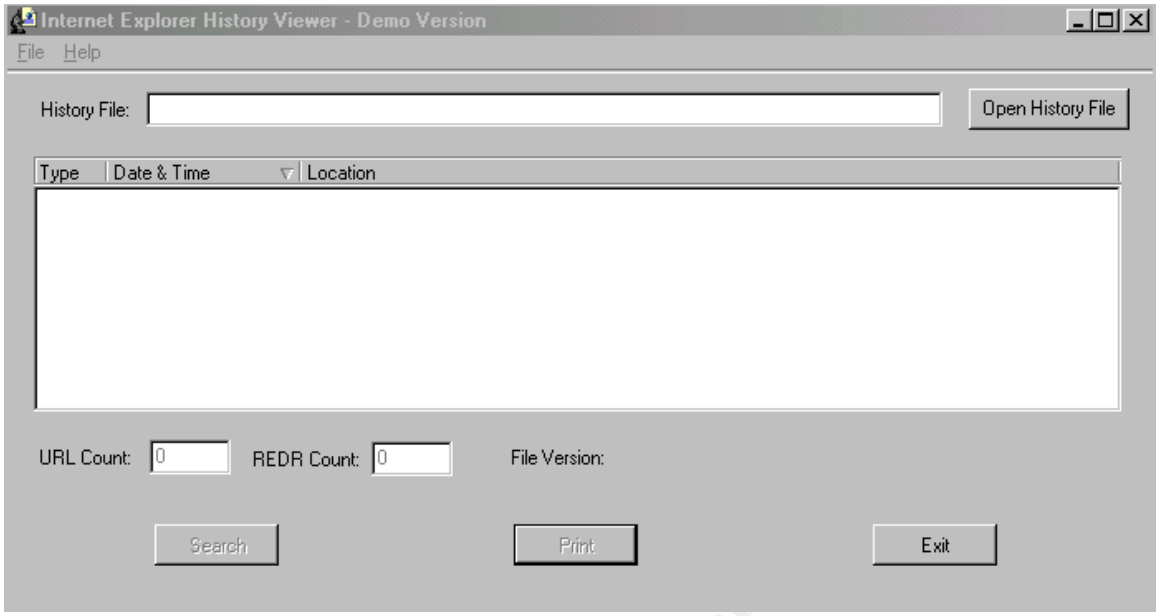

Figure 12. Screen Shot of IeHistory.

I booted back into Red Hat Linux 8.0 and used Autopsy to view the contents of the directory that was referenced in the INFO file. Further investigation of this directory revealed that Griffen O'Brien had to do a research paper on lasers when he was in the ninth grade at Herndon High. This research paper was for the Science Expo. I was able to determine this information based on the contents of two files - the title page.wps and New WordPad Document.doc.

Browsing the C:\WINDOWS\DESKTOP directory I found a file called FloridaTravelInfo.wps. This file contained the details for what looked like a school trip to Florida. I drew this conclusion because there were five chaperones, three of which were teachers and the other two were parents. They were to leave from Dulles airport on April fourth and return April eighth. They flew Delta Airlines and they stayed in the Howard Johnson hotel in Kissamee, FL. See Appendix B, pages 75-77, to view the contents of this file.

The next file I found was called shared.dat and it contained all the mp3's the user was sharing. These mp3's were stored on the D drive, which must be the Iomega zip drive. See Appendix B, pages 77-84, to view the contents of this file. I found a subdirectory called half pipe, which contained some blue prints of a skateboard half pipe. The next subdirectory I found was called MIMI PICS!. This folder contained nineteen photographs of what looked like a teenage girl.

The next subdirectory I investigated was called Mypage. This subdirectory contained an incomplete version of the user's homepage.
The next directory I looked in was the C:\winfiles directory. I came across two Microsoft works files in this directory. They were called GTBAX.doc, and

GTGRIFF.doc. Both of them were of the same content except for the person they were writing about. The first document had a title of:
"Baxter O'Brien – GT Multi-Purpose Referral Form Statement of Concern"

The second document had a title of:
"Griffen O'Brien – GT Multi-Purpose Referral Form Statement of Concern"

The subject of both of these documents was the admission of these two students into the Fairfax County's GT program. See Appendix B, pages 84-85, to view the contents of these files.

Internet Usage

While looking through the Windows directory I found the user's favorites directory. The bookmarks contained in this directory seemed to be all of the default bookmarks that come with Internet Explorer. In the History directory, which is where a log is kept of all websites the user visited, there were two more directories each containing an index.dat file as well as ten deleted directories, which only two contained an index.dat file and the rest were empty. Unfortunately, the deleted index.dat files I recovered were not intact and I could not view them. In order to view the contents of the non-deleted index.dat files I extracted the files from the directories onto the fat32 partition and I booted into Windows XP. I used the tool called IeHistory to view these files. I used this tool because of its ability to read Internet Explorer's index.dat files and place all the links in a table format designed for easy examination. Before using this tool I created an md5sum of both index.dat files. The md5sum for the first file was 815a144bb807da ce40- d8624a1f33dd1 and the md5sum for the second index.dat file was 062756e49b49c4e60276806a9c-70b78d. I also copied the index.dat file from the Temporary Internet Files directory, and the Cookies directory. The md5sums of the index.dat file in the Cookies directory was d3b90219af46e4f21248ab36117cfd33, and the md5sum of the index.dat file in the Temporary Internet Files was 928fc43b5fd9d8cf3ca0a- 8585d498935. I then booted into Windows XP, ran the program IeHistory and began examining the files. The first file was actually in the Internet Explore 4.x format, which is more evidence that the user updated Internet Explorer to 5.0. The following is a list of the URL's as well as a description of each URL that I extracted from the index.dat files.

- http://www.efn.org/~c_pruett/ is a link to a program a user can download to edit "stli" files in the game called Bungie's Myth: The Fallen Lords.
- http://members.aol.com/biruguitar/amu.html is a site called "A S I A N M U S I C U N D E R G R O U N D" and it is a website dedicated to Japanese rock music.
- http://www.i-mockery.com/ is a website that has the title "I-Mockery.com – Twisted, Cynical, Sarcastic, Evil, Odd, Humor to soothe the soul!"

- http://www.alloy.com/ is a website designed for teenagers. It has chat rooms, relationship quizzes, and links to information about colleges.
- http://www.babycenter.com/ is a link for an online store that sells items for babies.
- http://www.britneyspears.com/ is a link to a website all about Britney Spears.
- http://www.cartoonnetwork.com/ is a link to the Cartoon Network website. The Cartoon Network is a television channel that shows cartoons.
- http://hitbox.com/ is a website known as WebSideStory. According to this website "WebSideStory has a variety of services to help you optimize the performance of your online marketing, e-commerce and customer support initiatives"(http://hitbox.com/).
- http://engage.com/ is a website for a company that is according to this website "Dedicated to ensuring maximum value for your investment, Engage provides an extensive range of Professional Services to help you get the most from your Engage solution – from initial design to ongoing implementation." (http://engage.com/).
- http://moneycentral.msn.com/ this is an MSN website that has information on the stock market as well as banking and tax information.
- http://nightsurf.com/ is a link to according to this website "…the internet's authoritative resource and directory to legal, non-obscene mature-themed internet services" (http://nightsurf.com/). NightSurf is "…Internet *for* adults, *by* adults" (http://nightsurf.com/).
- http://www.hackers.com/ is a link to a website that teaches "...the world the ethics of true hackers and of hacking. That there is power in knowledge – both in security and creativity" (http://www.hackers.com/).
- http://www.howstuffworks.com/ is a website that has information on how things work. The user was searching for information on lasers.
- http://rabi.phys.virginia.edu/HTW//lasers.html is a link for a website created by Louis A. Bloomfield, a Professor of Physics at the University of Virginia. This site is about a neodymium-YAG laser.
- http://www.ask.com/ is a link to a search engine. The user was searching for information on lasers.
- http://www.laser-diodes.thomson-csf.com/ is a link for a website for a company named Thales Laser Diodes.
- http://www.lasermade.com.au/ is for a website that will "…provide an overview of Laser Cutting, WaterJet Cutting and Routing services provided by Lasermade" (http://www.lasermade.com.au/).
- http://www.collegehumor.com/ is a link for a website that contains all kinds of pictures and stories involving college students.
- http://www.mirc.com/ is the mIRC website. IRC is a chat program that is often used by hackers.
- http://www.girlsgonewild.com/ is a link to a website that has a movie collection

involving mostly college girls on spring break and the crazy things they do.

- http://www.fcps.k12.va.us/ is a link to the Fairfax County Public Schools website.
- http://www.americas.creative.com/ is a link to the website for the company "Creative", which is a manufacturer of computer hardware and software products.
- http://www.asus.com/ is a link to the website for the company "Asus", who is a manufacturer of computer motherboards.
- http://www.dancesafe.org/ is a link for a website "promoting health and safety within the rave and nightclub community."
- http://www.rpmonline.org/drugawareness.html is a link for a website for drug information and awareness

I recalculated the md5sum's for all index.dat files I used and I obtained the same results as above. I booted back into Red Hat Linux and used Autopsy's file-browsing capability to complete my investigation.

I noticed the user had two different chat programs installed on the system. They were ICQ and AIM95 (AOL Instant Messenger). I wanted to investigate these programs in order to retrieve some user names, email addresses, and maybe some Internet sites each user went to.

ICQ was located in the folder C:\Program Files\ICQ. Within this directory there was a subdirectory called bookmark, which contained a file called bookmark.htm. This file contained all the ICQ user names as well as their ICQ bookmarks. The user's screen names were Freddy Newendyke, Ultimaso IIX, Skandranon, Lance, and 52554812.

The user Freddy Newendyke had only one bookmark. The link for that bookmark was to http://members.tripod.com/~thingsihate/freeicq.html. I was unable to access this website because the page could not be found.

The user Ultimaso IIX also had only one bookmark as well. The link for this bookmark was to http://www.geocities.com/Tokyo/Dojo/1240/. Again I was unable to access this website because the page could not be found.

The user Skandranon had two bookmarks. They were to http://www.fortunecity.Com/ lympia/naseem/222/PleaseHelp.html, and http://members.aol.com/AkayaKat/start.html. The pages on both of these websites could not be found.

The user Lance had two bookmarks. They were http://www.geocities.com/SoHo/Coffeehouse/7045/lovequiz.html, and http://www.angelfire.com/ak/AAAHLABAMA/index.html. I was unable to access the first website because the page could not be found, but the second website contained a picture a child might have drawn as well as a short story about a butterfly named Henry.

In the aim95 directory I was able to confirm all the AOL Instant Messenger screen names that I found in the registry. There were no bookmarks located in this directory.

However, in the America Online 4.0 directory there was a subdirectory called organize. In this directory I found 13 files with names that looked like they could have been used as screen names for America Online. The names of these files are dra30294, dragon32.66, dragon46.42, drk24977, ellenva, ellenva.ARL, gna5872.ARL, gnattheb.ug, gri8975.ARL, griffeno.b, nig41601.ARL, night978.6, and rfe0. Running the strings command on each of these files I was able to extract out the text that each file contained.

In the file named dra30294 the following link was found: http://ww4.amateurpages.com/lee/bed/bed2/bed3/bed4/bed5/bed9.htm. This could possibly be a link to a pornographic website. There were also several more listings of the URL http://ww4.amateurpages.com/, which is a pornographic website.

In the file dragon32.66 I found a user name, which is Dragon3266.

The file dragon46.42 contained the same information as the previous file except for the user name. The user name in this file is Dragon4642.

The next file, drk24977, was the same as the previous two again except for the user name, which in this file is DrkPenguin68.

The file ellenva was also the same as the previous three, but the user name was EllenVA.

In the next file, ellenva.ARL, I was able to extract out some URL's the user visited. They include http://odyssey.org/manual/ Performing/Spont/ spont.html. There were two URL's that started with aol:// I am assuming these are links that can be accessed only through America Online. The links are aol://4344:3059.xmas.19545311.592423503, and aol://4344:1204.mxmain.9384765.562532827. I was unable to find any of these links.

In the next file, gna5872.ARL, I was able to find another user name which was Gnatthebug and I was able to view some URL's this user visited. They include http://3345573391/pip114/69.htm, and aol://2719:2-2-BloNdi829190. BloNdi829190 could possibly an AOL screen name. Again, I was unable to access these websites.

In the file gnattheb.ug, I was only able to find the previous user's screen name.

In the file gri8975.ARL I was able to find the user's screen name, which was

GriffenOB, and I was also able to view several URL's the user visited. Below is the list of URL's this user visited.

- http://www.howstuffworks.com/ was described above.
- http://help.earthlink.net/access/ is a link to an Earthlink support website used to get Internet access numbers.
- http://www.collegehumor.com/pictures/ schoolwriting.html. This link was not found, but http://www.collegehumor.com was found and is described above.
- http://www.maps.com/ is a website where you can find maps and get directions.

In the file griffeno.b I found the following email addresses and screen names.

- Robyn Ally – Miss742@aol.com
- Laura McFalls – zoe_1786@yahoo.com
- Rupert Brink – crazy_aussieboy@hotmail.com
- Kevin Nagel – TwinkyTara@AOL.com
- Katie Ouderkirf –Cowpony815@Yahoo.com
- Unknown – Dcarey01@snet.net
- Unknown – haines_family@yahoo.com
- Craig Lewis – actorman1@hotmail.com, iamame@hotmail.com, nsync53@hotmail.com
- Danny Kim –nayruzealot@hotmail.com
- Liza Potnikova – dplotnik@erols.com, sugarhighme@excite.com
- Chris Haines – haines_family@yahoo.com
- Trevor Willis – freakiam@phayze.com
- Phillip Wisneiski – gifabear@yahoo.com
- Paul Trigerio – pazafan31@hotmail.com
- Becky Elstad – rosebeaks@hotmail.com
- Stefan Voss – frankyfluf@hotmail.com
- Rosie Kendall – techrose@mailcity.com
- Patrick Benbow – PatandHat
- Robin Alley – Gumgrl85AOLFRS
- Timmy Boddie – Tbod104235 (Possible cousin of the user because the word cousin appeared after the screen name).
- Brock Boddie – Bb0024 (Possible cousin of the user because the word cousin appeared after the screen name).
- Mike Boddie – BuffX7 (Possible cousin of the user because the word cousin appeared after the screen name).

I also found ten URL's this user visited. They are listed below.

- http://www.vannatter.com/ is a web page that the vannatter family created. On this page are five links with the names of each family member. The links are dustin vannatter, sena vannatter, alise vannatter, keylie vannatter, and haylie vannatter-senters. The first time I accessed the first link I was able to download a resume, but a week later when I accessed it again the link took me to a page where you could enter your name. The resume was for a Dustin Paul Vannatter who lives in Cuyahoga Falls, OH. See Appendix B, pages 85-87, to view the complete resume. The second link took me to a page that had three other links. There was one for a journal, which had seventy entries and the other two were to sign a guest book and to send an email. The last three links I was unable to access because they required a password.
- http://www.i-mockery.com/main.asp this website was described above.
- http://www.hackers.com/texts/neos/agentsteal-fbi.txt. I was unable to access this file.
- http://members.aol.com:/blakgryph/gryph.html is a link for a website with random characters displayed all over the screen. I decided to go here to see if there is anything at the link http://members.aol.com:/blakgryph. At this link I found a listing of picture files that contained animated characters. I assume that the page gryph.html listed above had some kind of association with these picture files.
- http://www.dynamicdrive.com/ is a link to a website that provides free DHTML scripts.
- http://reid.simmons.net/. This website was described above.
- http://www.howstuffworks.com/laser.htm is a website that describes how a laser works.
- http://www.einsteingifts.com/index.cfm is a link to a website that sells Einstein gifts. For example, they sell a T-Shirt with a picture of Einstein on it.

In the file nig41601.ARL I found many URL's to http://www.samgoody.com/. I also found another screen name, which is Night9786.

In the file night978.6 I found the following two email addresses: Dcarey01@snet.net and haines_family@yahoo.com. These email addresses are in the list of email addresses above.

In the file rfe0 I found the screen name of rfe0.

After investigated the files, applications, and Internet URL's on this hard drive I was able to conclude that this hard drive was used in a personal/family computer. For more detailed conclusion see the Conclusions section on page 32.

Timeline

I used Autopsy to create a timeline for the image of the hard drive. To do this I selected the "Time Line" button from the main menu in Autopsy, created a data file, and generated the timeline by pressing the "Create" button. See Figures 13-16 below for screen shots on creating the timeline. Based on my investigation above I wanted to use the timeline to verify when Windows 95 was installed, and when software and hardware were added or updated. Based on the timeline Autopsy created I can conclude that the operating system was installed on August 24, 1996. I determined this by searching for the files kernel32.dll and user32.dll. I found both of these files referenced on two different dates. One was December 31, 1969, which is not correct, and the other was August 24, 1996. With this in mind I can conclude that any dates prior to this one are incorrect or they refer to a previous installation of Windows. I was able to verify that a zip drive was installed on this system on March 10,1998. On March 14, 1998 America Online version 1.0 was installed. On July 09, 1998 America Online was then upgraded to version 4.0. There was a reference on October 27, 1998 to a file called cute.bmp located in the C:\DIR00001 directory. I didn't investigate this directory in my previous examination and decided to further investigate it at this time.

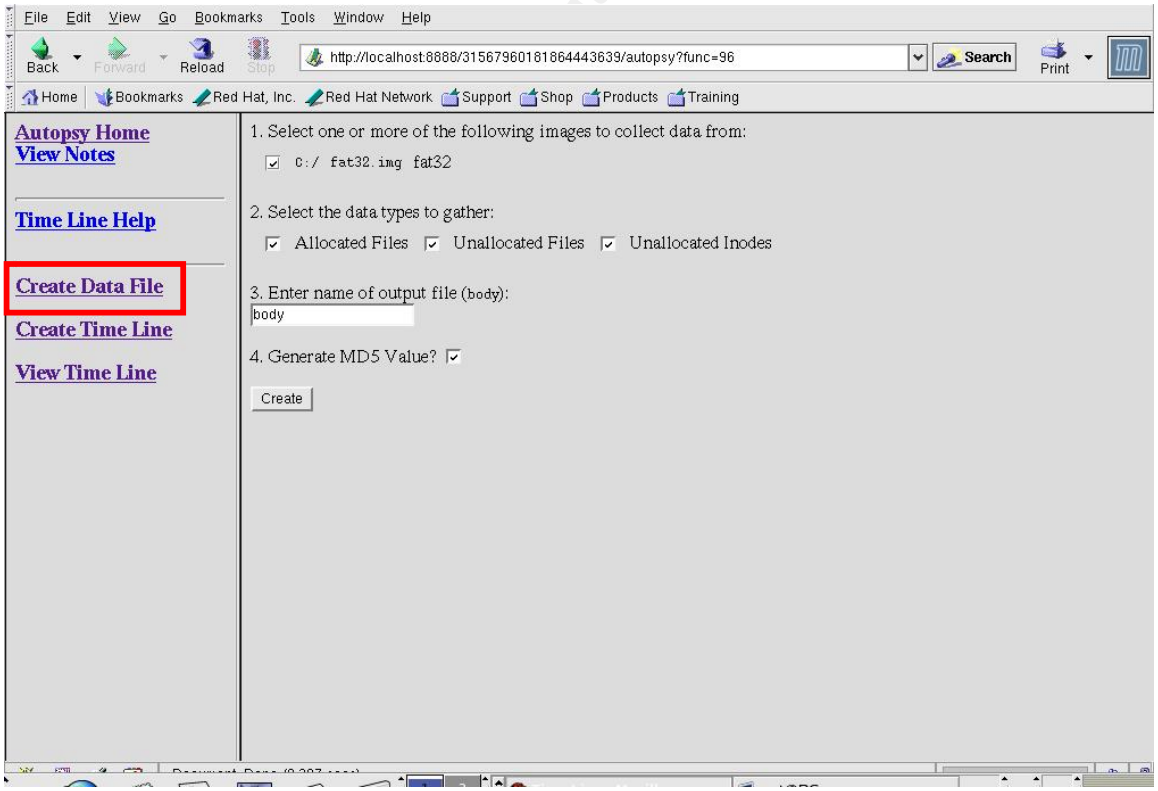

Figure 13. Screen Shot of Autopsy's Create Data File Function.

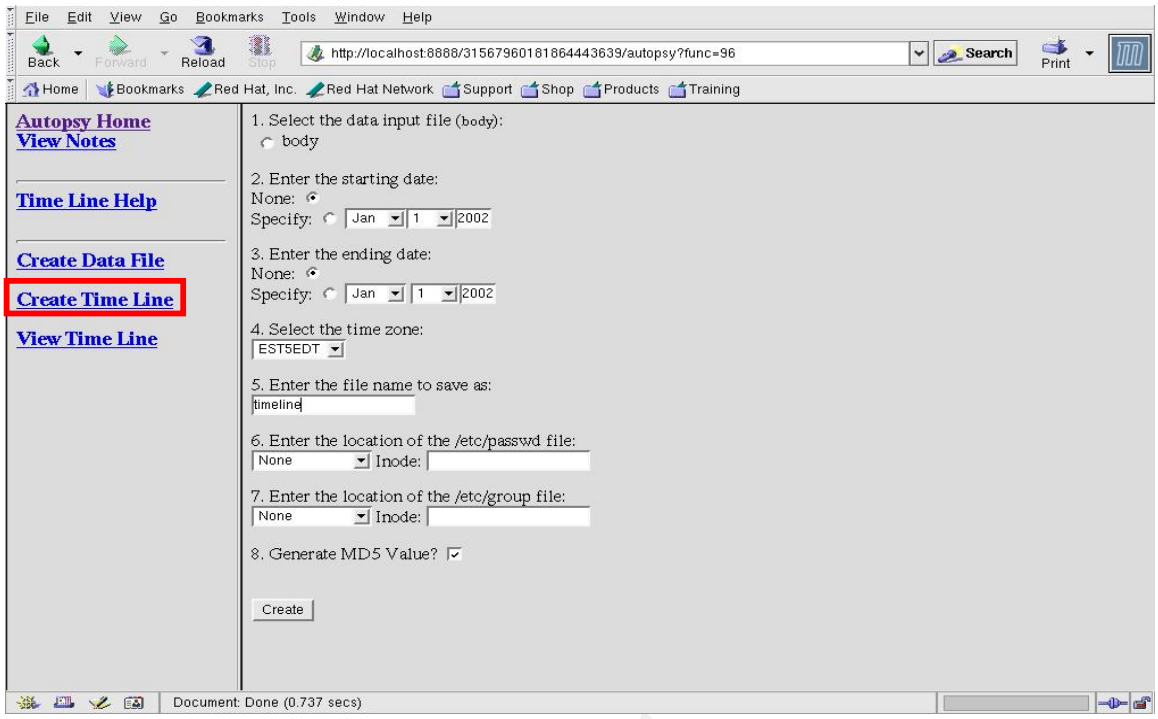

Figure 14. Screen Shot of Autopsy's Create Time Line Function.

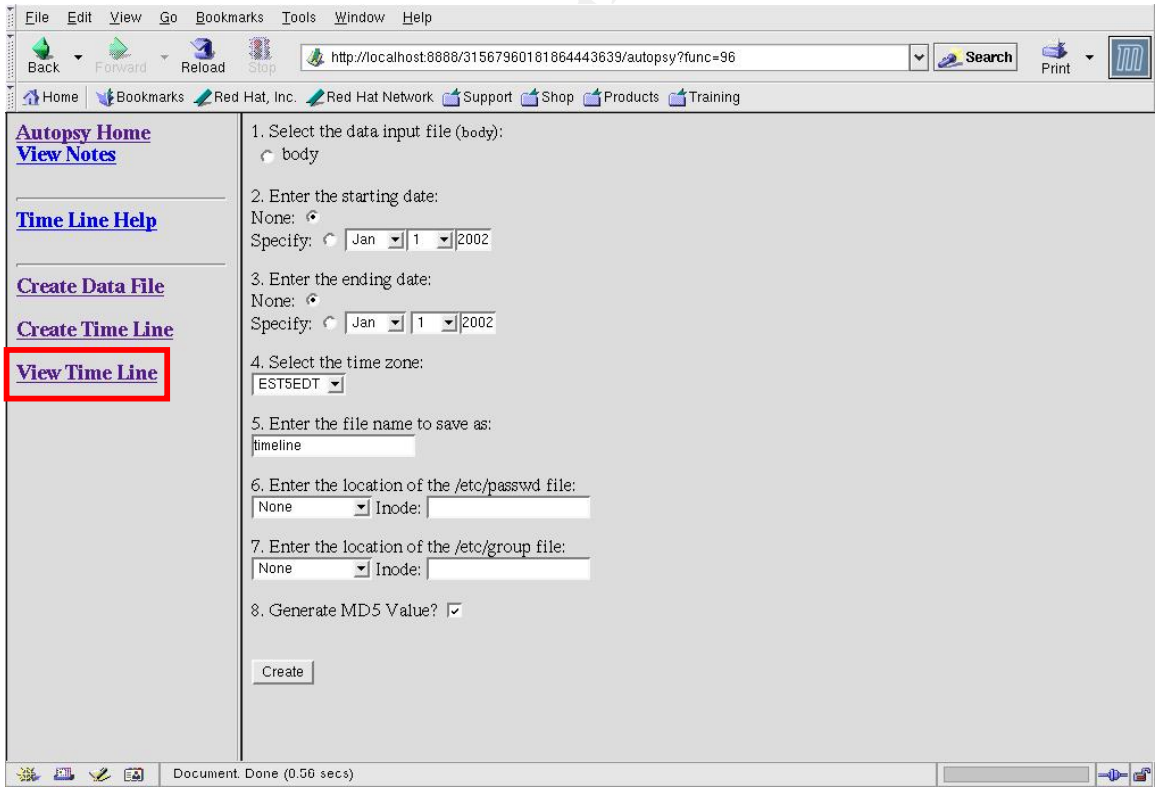

Figure 15. Screen Shot of Autopsy's View Time Line Function.

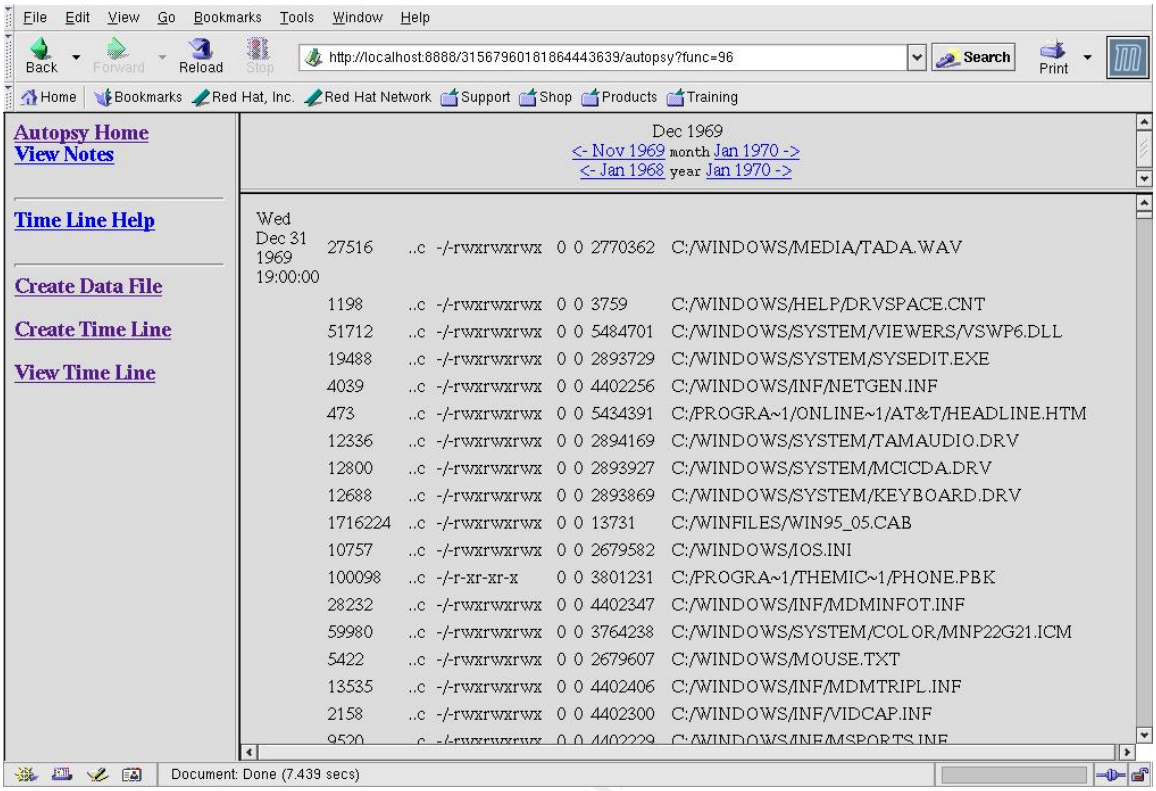

Figure 16. Screen Shot of the Time Line.

Further investigation of this directory revealed two files called cute.bmp, and snowman.jpg. I was unable to open either of these files because they were not valid picture files. I opened cute.bmp with a hex editor to try to determine the type of file it was, but it did not have a file signature. The same was true for the other file. This makes me believe that these may be encrypted. On January 26, 1999 Microsoft Works was upgraded to version 4.5. On April 14, 1999 autoexec.org, config.osi, autoexec.osi, and config.org were referenced. Another file called PRIV_MSG.COM was also referenced. Further investigation of this file revealed that this was a file for a game called Privateer 2: The Darkening. These files were referenced again on Jun 15, 2000. On July 28, 1999 Internet Explorer was upgraded to version 5.0. On March 20, 2000 McAfee was installed on this system. This hard drive was last used on December 31, 2000. See Appendix C pages 88-151 for the resulting timeline.

Recovery of Deleted Files

The recovery of deleted files was almost impossible because the hard drive was almost filled with undeleted data. However, I was able to recover two files, which were called _ET7221.TMP, and _ONFIG.!~!. _ET7221.TMP was the deleted Cscript file I mentioned above in the section Modification to OS Configuration and Files. _ONFIG.!~! was the deleted config.sys file I mentioned above in the section File Analysis. The process I used to recover these files was to use Autopsy's file browsing capability. The deleted files were highlighted in red.

When I clicked on them they were displayed in Autopsy's hex viewer. From there I was able to press the extract link to save each one to my hard drive.

Keyword Search

To do a keyword search I used Autopsy's keyword search capability. To use this feature select Keyword Search from the main menu of Autopsy. See Figure 17 below for a screen shot of this function.

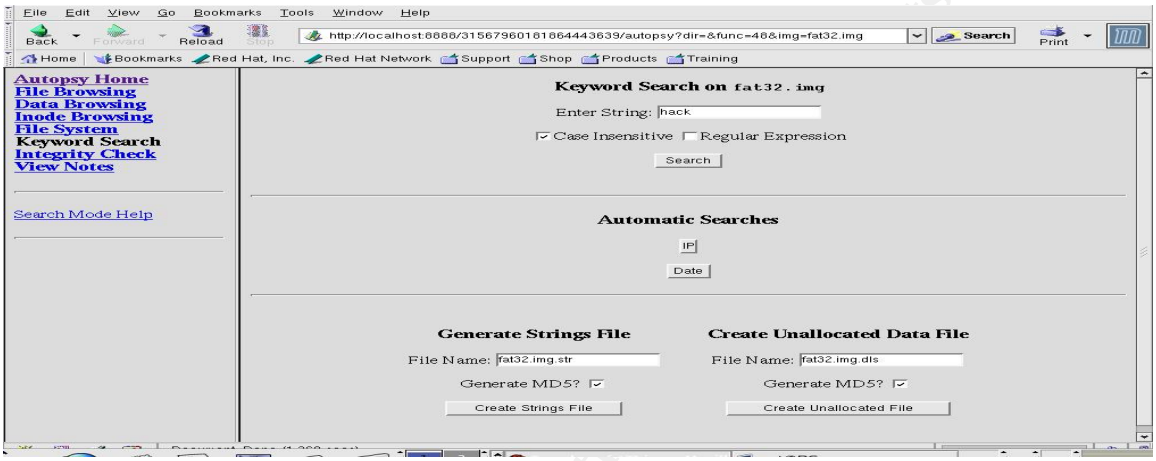

Figure 17. Screen Shot of Autopsy's Keyword Search Function.

Based on the results of my investigation, the only keywords I searched for were hack,encrypt, RC4, BlowFish, RSA, DES, and O'Brien. I decided to search for the word hack because of the hacker tools I found on the drive as well as the links to hacker websites. I decided to search for encrypt, RC4, BlowFish, RSA, and DES (these are encryption algorithms, except for the word encrypt) because of the possibly encrypted files cute.bmp and snowman.jpg that were found on the hard drive. I wanted to find out if any reference to encryption could be found. I searched for O'Brien to see if any other names other than Thomas, Griffen, and Baxter would be found. I decided that searching for any additional words would not be beneficial to this investigation because most of the results I would get back would be just duplicating the results from above and they would not lead to any additional information.

As a result of this keyword search I was able to find some new documents on this drive that contained information about hacking. The first reference I found was to the URL http://www.hackers.com/texts/neos/starthak.txt. This web page was to a document titled "THE ULTIMATE BEGINNER'S GUIDE TO HACKING AND PHREAKING." I also found two other partial files. The first file involved renaming a long file name in a Fat32 file system which resulted in the short file name becoming foobar~2 instead of foobar~1. I tried to find this document on the Internet, but I was unsuccessful. The second partial file was about a shell someone created possibly using C++. The author writes about hacking into

hardware at UCLA where he is pursuing his PhD degree in Computer Science. Refer to Appendix D, pages 152-192, for the complete contents of these files.

When searching for the words encrypt, RC4, BlowFish, RSA, and DES, which would infer that the user was using some sort of encryption, I did not find any instances of these words. Therefore, there is no evidence that the user was using encryption.

When searching for the name O'Brien, I did not find any other names that would conclude that there were other family members using this machine. The only names found were Thomas, Griffen, and Baxter.

Conclusion

Based on the results of my investigation I was able to answer the following questions: Was this hard drive from a personal computer or from a business computer? If this is a personal computer, what are some of the user's hobbies? If this is a business computer, what is the user's profession? What types of applications were installed on this system? Was an Internet connection available? Below are the answers to these questions.

This hard drive came from a family computer. According to my results, the family consisted of a father, Thomas, and his two sons, Griffen, and Baxter. I was able to determine that the family consisted of a father and his two sons due to the fact that only three O'Brien names were found on this hard drive. I was able to conclude that the computer was used as a family computer based on several different factors. The first factor was the variety of websites that the user's visited. They ranged from hacking websites to the cartoon network web site. This indicates that users of different ages were accessing this computer. The second factor was the different screen names for AOL, AOL Instant Messenger, and ICQ. The last and most important factor was the school assignments and the trip to Florida document that I found. These documents are further evidence that this computer was shared by members of a family, some of which were in either middle or high school.

The types of applications installed on this machine can be divided up into six categories: Games, Hacker Tools, Graphics Applications, Internet/Multimedia Applications, Productivity Applications, and Utilities.

The following applications are in games:

- GopherGolf
- Battle.net
- Rugrats Adventure Game
- Dungeon Keeper II
- MindRover
- Tomb Raider IV (Demo)

- Majesty
- ESCAPEplay
- Snes9X
- Test Drive 6
- Army Builder
- Magic: The Gathering
- Soldier of Fortune
- Half-Life
- MechWarrior 2
- Sid Meier's ALPHA CENTAURI
- The Driver Demo
- Gangsters Demo
- LEGO Island
- Age of Empires
- Warzone 2100
- Tom Clancy's Rainbow Six
- Starcraft
- West Front Demo
- The Red Odyssey Demo

The following applications are in Hacker Tools:

- Tonegen
- tl031
- superd
- phmas10
- boxtone

The following applications are in Graphics Applications:

- GIFmation
- GIFMovieGear
- Paint Shop Pro
- 3D Movie Maker

The following applications are in Internet/Multimedia Applications:

- AllAdvantage
- America Online
- AOL Instant Messenger
- Mjuice Media Player
- Shockwave 8
- Sonique
- ICQ
- MIRC
- Netscape Navigator
- Thing Maker

- Real Player
- FakeSurf
- Napster
- QuickTime
- VivoActive PowerPlayer

The following applications are in Productivity Applications:

- Adobe Acrobat Reader v 4.0
- EditPad Lite
- MSWorks

The following applications are in Utilities:

- TI-Graph Link 83 Plus
- Winzip

Based on the different types of applications found on this computer there is once again evidence that users of different age groups were using this computer. This evidence further indicates that this hard drive was from a family computer.

Griffen was the main user of the computer. His hobbies included playing computer games, skateboarding, and hacking. I was able to conclude that he was the user that downloaded the hacking programs I mentioned above. He was also the user that visited the hacking websites. The hacking tools he downloaded are used to find phone numbers of computers on the Internet as well as to make free long distance phone calls. Based on the evidence found, I can conclude that Griffen was just starting to get involved in hacking and he didn't really have a great interest in it at the time. Griffen was also the author of several school assignments found on the hard drive. They included the report on lasers, the Spanish document, and the English letter. Griffen was the user who installed and played most of the games that are listed above. He also seemed to have an interest in computer animation. He used such applications as GIFmation and GIFMovieGear.

As for Thomas and Baxter, I can only theorize what they used the computer for. I believe Thomas was the one who went to http://nightsurf.com/, which is an adult website and was also the one to visit http://www4.amatuerpages.com/, another pornographic website. The reason I believe that it was Thomas who went to the pornographic websites was because you must be 18 years of age and you must pay to view the websites. I also believe he was the one to visit the financial websites http://moneycentral.msn.com/ and http://engage.com/.

As for Baxter, I believe he was the younger brother and was the one to visit the website http://cartoonnetwork.com/. Baxter played some games such as the Rugrats Adventure Game and the LEGO Island game.

I was also able to conclude that the computer had a dial up connection to the Internet and used America Online version 4.0 was their ISP.

Part 3 – Legal Issues of Incident Handling

A. I can't give any customer related information to the law enforcement officer because I risk being sued by the individual who's information I would give. If the law enforcement officer had a subpoena then I could give him the information he needed. The only information I could tell him at this time would be that I have verified that valid user had logged on during the period of the suspicious activity. According to U.S. law 18 U.S.C. 2702:

> "a provider of remote computing service or electronic communication service to the public shall not knowingly divulge a record or other information pertaining to a subscriber to or customer of such service (not including the contents of communications covered by paragraph (1) or (2)) to any governmental entity."(http://www.cybercrime .gov/usc2702.htm)

Once the law enforcement official contacted me about the suspicious activity I am required to "…retain the records for 90 days, renewable for another 90-day period upon a government request."(http://www.cybercrime.gov/s&smanual2002.htm - _IIIG1_).

B. The law enforcement officer must tell me to be able to account for the evidence at all times to ensure that there is no tampering with the evidence in order to maintain the chain of custody. The best way to go about this is to gather all relevant files and place them on a non-alterable medium such as a CD.

C. In order for me to send the law enforcement officer my logs, one of following must apply.

- The information is "…necessarily incident to the rendition of the service or to the protection of the rights or property of the provider of that service," (http://www.cybercrime.gov/usc2702.htm);
- "If the provider reasonably believes that an emergency involving immediate danger of death or serious physical injury to any person…" (http://www.cybercrime.gov/usc2702.htm);
- "with the lawful consent of the customer or subscriber"; (http://www.cybercrime.gov/usc2702.htm);
- "The Child Protection and Sexual Predator Punishment Act of 1998, 42 U.S.C. § 13032, mandates the disclosure, 18 U.S.C. § 2702(b)(6)(B);"

(http://www.cybercrime.gov/s&smanual2002.htm#_IIIE_)

- The law enforcement officer has obtained a court order requiring me to hand over my logs.

D. Other investigative activities I am permitted to conduct at this time would be monitoring the network for suspicious activity, and the preservation of all the evidence. According to 18 U.S.C. § 2703(f):

> "A provider of wire or electronic communication service or a remote computing service, upon the request of a governmental entity, shall take all necessary steps to preserve records and other evidence in its possession pending the issuance of a court order or other process."(http://www.cybercrime.gov/s&smanual 2002.htm#_IIIG1_).

E. If my logs revealed that a hacker gained unauthorized access to my system I would give the law enforcement officer all of my logs as well as any other monitoring I performed on the network. This is legal as long as I minimized the interception of private communications unrelated to the investigation. According to 18 U.S.C § 2511(2)(a)(i) :

> "It shall not be unlawful under this chapter for an operator of a switchboard, or an officer, employee, or agent of a provider of wire or electronic communication service, whose facilities are used in the transmission of a wire or electronic communication, to intercept, disclose, or use that communication in the normal course of his employment while engaged in any activity which is a necessary incident to the rendition of his service or to the protection of the rights or property of the provider of that service, except that a provider of wire communication service to the public shall not utilize service observing or random monitoring except for mechanical or service quality control checks."(http://www4.law.cornell.edu /uscode/18/2511.html).

Commutative Axiom’

Commutative Axiom

The order in which a multiplication problem is written does not affect the outcome.

ab=ba
ab=ba

It was a late summer day. LittlIt was a beautiful summer morning. The birds were chirping and the sun was shining, but little Suzy was fast asleep in her bed. Then her mom bursted in and yelled “WAKE UP SUZY!!!!” “YOUR GOING TO MISS YOUR BUS TO CAMP!!!” G TO MISS YOUR BUS TO CAMP!!!”

“But mom,” Suzy replied in a sleepy voin,” Suzy replied in a sleepy voice, “I don’t want to go to summer camp. All you do is sit around and make necklaces and get eaten by bugs!” “It
 “It’s going to be boring!” Suz “It’s going to be boring!” Suzy whined

“Suzy, I don’t want to hear another word about it. your father t it. YourEveryone was gathered around theEveryone was gathered in their groups of 5. They were so excited that they were acutually going to the museum! The teacher needed a head count so he told everyone to stand still while he counted the number of groups so he could multiply it by 5 and find the toltltiply it by 5 and find the total number of students. He counted a total number of 7 groups. He did the math and came up with the solution of 35 stuf up with the solution of 35 students. Everyone then boarded the bus and went to the museum. at bus and went to the museum. AT bus and went to the museum. At the museum they e museum the students had a great time. When they all got back to the school, the teacher needed to take another head count to make sure they hadn’t left anyone at the museum. He told the students to get back into their geudents to get back into their groups of 5 but the, students, feeling like causing a little trouble, decided

to make 5 groups of 7. The teacher saw them do this but, as he was tired and wanted to get hom,was tired and wanted to get home, didn't tell them to get back into their normal groups. Instead, he decided to just go along and count them up anyways. He figured that according to the commutative property e property he could of 5 times 7do 7 times 5 instead of of 5 times 5 of 7do 7 times 7do 5 instead of 7 times 5. He still came up with 35 which meant the came up with 35 which meant that they weren't missing anyone ant they weren't missing anyone so all the students could go home now.
ExampleThe

English letter.txt

Dear Mr. Alberto,

I have read the book "Ishmael" for my English 9 honors class, and it has inspired me to want to save the world. Why you ask? It is because the book has made me realize how poorly man has been treating our own planet. People are littering, cutting down trees, squashing all animals that stand in our way, and acting like we own this world. I was appalled while I was reading the book, not believing that we were actually capable of doing this, but it made me feel a need to do something about it.

My house is located right next to a creek in Herndon. It runs through many forests and all around the town of Herndon. Yet, it seems to me that it is very polluted. Whenever I look into it, I notice lots of litter and trash in it. Also, it is where all the runoff water from many streets end up. That means that every time there is a rainstorm, many chemicals and toxins are flowing into it from streets and lawns and construction sites.

This creek houses many fish and crayfish, and I believe that it may be the water source for many wild animals such as deer, wolves, and foxes. If it is polluted, as I believe, then this means that all these animals are either living in, or consuming many harmful chemicals. As "Ishmael" has inspired me to try and take action in helping to save the planet, I'd like to clean up this creek.

I'd go around it, cleaning up trash and throwing it away, except for the recyclables which I would recycle. Not only would this save many animals, but it would also make the river better looking, and not ugly with beer cans and McDonalds burger boxes floating around. Also, I could possibly test the creek for harmful chemicals that may be polluting it. Then, I'd be able to track them to the worst source of the pollution, and hopefully get it to stop. That way the creek would remain clean and healthy for animals.

While it may not matter much in the grand scheme of the world whether this creek is clean or not, it would mean that I'd be living near a clean creek, and the animals would have clean water to drink. I hope that this letter may have inspired you the way that "Ishmael" has inspired me, and that you would like to join me in my attempts to clean up my creek.

Sincerely,
Griffen O'Brien

>                          Executive Summary
>
>
```

> There is a huge
> untapped pool of
> potential volunteers
> in the U.S today: the
> 26 million young
> adults between the
> ages of 18-24.
> Succeeding in reaching
> young adults requires
> nonprofits to rethink
> the messages you use,
> your recruiting
> methods and vehicles,
> and your expectations
> for volunteers. But
> those nonprofit
> benefited enormously
> by their volunteerism,
> energy and creativity.
> organizations that
> have found ways to
> reach and attract this
> group have
>
>
> The Busy Lives of
> Young Adults
> Today's young adults
> should not be confused
> with Generation X or
> even with their more
> well-known parents,
> the Baby Boomers.
> Young adults today are
> fiercely
> individualistic, and
> are media savvy to a
> degree never seen
> before. They are
> comfortable with ? and
> bombarded by ? the
> abundance of
> technologies that
> exist today, from cell
> phones to beepers to
> the Internet. As a
> consequence, they are
> also extremely
> stressed in their
> everyday lives. They
> also believe strongly
> that they can make the
> world a better place ?
> a perfect springboard
> for getting them
> involved as
> volunteers.

>
>
> Establishing roots
> within communities ?
> whether a
> neighborhood, school,
> work or religious
> institution ? is
> integral for many of
> today's young adults.
> They consider
> community involvement
> to be a core part of
> their self-definition.
> Others believe that
> their lives are
> already too busy and
> stressful to pay much
> attention to the
> community. They had
> hardened themselves,
> and had turned inward
> ? to friends and
> families ? to distract
> themselves from the
> world's problems.
>
>
> Today's young adults
> are open to finding
> lots of different ways
> to care, as opposed to
> earlier generations
> who often found one
> specific area in which
> to make a difference.
> Among the issues they
> find compelling are:
> health, substance
> abuse, children's
> issues, the elderly,
> violence prevention,
> animal rights, and the
> environment.
>
>
> Volunteers vs.
> Non-Volunteers
> There are several keys
> to getting young
> adults to volunteer
> initially ? and to
> retaining them as
> volunteers: informing
> them of the
> opportunities,
> convincing them that

> their time is
> important to the
> success of the
> program, getting them
> to see the cause as a
> personal one, showing
> them how their
> involvement can
> benefit them
> personally, and
> ensuring that they
> believe they are
> making a real
> contribution to
> changing the world.
>
>
> There are several
> reasons why some young
> adults choose not to
> volunteer, including
> being unaware of
> opportunities, having
> a fear of
> volunteering, and
> lacking the time.
> Another key factor was
> the lack of volunteer
> role models in their
> lives. Many
> non-volunteers have
> very specific images
> of volunteers in their
> minds, and these
> images stand in stark
> contrast to the way
> they view themselves.
>
>
> How You Attract and
> Retain Volunteers
> Begin by selecting and
> training a Volunteer
> Coordinator whose
> mission is to
> coordinate all
> volunteer efforts and
> communications. Her
> first goal is to make
> each young adult
> volunteer feel a sense
> of affiliation with
> you and your cause.
> She should establish
> recognition systems so
> volunteers feel that
> their time and efforts

> are appreciated. The Coordinator must also stimulate introspection among the volunteers to help them find meaning and passion in their volunteer work. Volunteers must be given meaningful work to do within your organization. And it is important to foster relationships between volunteers, as that will often be a strong motivator to get your volunteers to keep coming back.
>
>
> And simplify the process of volunteerism on behalf of young adults. Anything you can do to avoid wasting their valuable time will send a strong message that you care about your volunteers and understand their needs. Offer a variety of time commitments to help them fit volunteering into their busy lives, including one-day projects, once a week projects, ongoing "fit it in when you can" projects, and part-time internships.
>
>
> Creating and Delivering Your Messages
> The message that resonated best with young adults was: "By getting involved in a social cause, I know that I can't change the world, but I might be able to make a small difference in

> someone else's life." Both volunteers and non-volunteers liked this statement: "It makes me feel good to help others."
>
>
> A powerful message is that nonprofit organizations have much to give back to those who get involved with them. Whether it's gaining new friends, new skills, or a broader sense of meaning about the world, volunteering can contribute to a young person's life in ways few other activities can.
>
>
> Of course there is no one key message that will work for every organization. The goal is to find a story or message that works for your organization, and then incorporate it into all of your communications. By coming at today's young people with one consistent message, you'll reinforce your brand and be more likely to stand out amidst all the clutter.
>
>
> Try to position yourselves as people who have a common passion and rally around a cause, rather than around an institution. You can also position volunteer work as being all about ideas. Today's entrepreneurial young

> adults, more than any
> other generation, have
> embraced the power of
> ideas.
>
>
> Many nonprofit
> organizations choose
> celebrity
> spokespersons to
> heighten the profile
> of their organization
> or cause. If you
> choose to use a
> celebrity, look for
> one who cares deeply
> about the issues your
> organization is
> involved in. Or
> consider working with
> "alternative"
> celebrities, such as
> authors, local
> musicians, athletes,
> and new/emerging
> actors and actresses.
>
>
> A less expensive
> alternative is to find
> a spokesperson who is
> an opinion leader, or
> influential young
> person in your
> community. The theory
> is that, if an
> influencer is using
> your product ? or is
> involved with or
> supports your cause ?
> his peers will begin
> to ask him about it,
> and eventually they
> too will seek you out.
>
>
> Choosing Vehicles to
> Reach Your Audience
> Once you have
> developed your
> messages and selected
> and trained your
> spokesperson, the
> challenge is to ensure
> that your messages are
> heard by and resonate
> with your target

> audience. This
> requires using a
> variety of media,
> including symbols such
> as logos, ribbons or
> pins, and t-shirts.
> Use the mass media
> that appeals to young
> adults ? cable access
> and local TV
> programming, magazines
> aimed specifically at
> young people, and
> postcards, letters and
> newsletters sent
> directly to their
> homes. Young adults
> listen to an average
> of 23 hours of radio
> programming per week,
> so use this medium to
> reach them with your
> messages. And of
> course the Internet
> provides a multitude
> of ways to reach young
> adults, from chat
> rooms and bulletin
> boards to listservs
> and email.
>
>
> Conclusion
> There has never been a
> better time to engage
> young adults in the
> vital work nonprofits
> are doing in
> communities across the
> country. They are
> being bombarded with
> often confusing
> messages about
> opportunities for
> amassing great wealth,
> about growing social
> problems such as
> poverty, lack of
> adequate health
> insurance and
> increasing violence,
> and about politics. It
> is entirely possible
> for nonprofit
> organizations to cut
> through the clutter
> with targeted messages

```
>                          for getting young
>                          adults involved in
>                          causes and
>                          organizations that are
>                          meaningful to them.
>                          Using the tools and
>                          strategies included in
>                          the manual will help
>                          you succeed in
>                          cultivating young
>                          adults as lifelong
>                          volunteers.

Florida Payment Due Date
Food Coupons
Park Pass
Chaperones
Florida Rooming List

Florida Flight Information
We will be flying Delta Airlines
Flight 2445
Wed Apr 4th
Leave Dulles at 1pm
Arrive Orlando at 3:15pm

Flight 2492
Sun Apr 8th

Leave Orlando at 8:30pm
Arrive Dulles at 10:35pm
We are working on a school bus to take everyone to the airport on April 4th
Mears Transportation will be taking us to and from the hotel
***Students will need to be picked up at Dulles on Sunday night April 8th

Florida Hotel Information
Howard Johnson Maingate East
6051 West Irlo Bronson Hway
Kissamee, FL 34747
407-396-1748
The hotel features 2 heated pools (bring a swim suit), a game room, and LIMITED transportation to and from the Disney parks. There will be additional transportation to/from Epcot on competition days.
We will be checking out Sunday morning, but not leaving for the airport until late afternoon. They have a luggage room where we can store our suitcases. Also, since they have limited transportation to and from the park you will need to pay EXTRA CLOSE ATTENTION to the schedule so that you will be back in time for the bus to the airport.

Florida Payment Due Date
Final payment is due for everyone NO LATER THAN Tuesday Jan 16th at 2:30pm. If payment is not received by then you will not be going to Florida.
Costs for students/volunteers is $250 minus $50 deposit for balance of $200.
Costs for guests are:
Single Occupancy is $825 per person
Double Occupancy is $700 per person

Food Coupons
Costs include three breakfast coupons and three lunch OR dinner coupons. Obviously this will not be enough to feed you for all 5 days, so you will need to bring additional money for food.

Park Pass
Costs include a 4-day park pass which can be used at Epcot, MGM Studios, Fantasyland, and Animal Kingdom. Since we will be there for 5 days and your park pass is only for 4, then you need to plan accordingly. The competition ends on Saturday and Sunday is open for attending the parks. Make sure that you do not use up all of the days before Sunday.
NEW THIS YEAR-- in the past you could only use the park pass for the four parks listed above, but now you may use ONE DAY ONLY for EITHER Disney Quest or one of the water parks (Typhoon Lagoon or Blizzard Beach). You cannot use it for more than one day and you may only use it for one of the "specialty" parks.

GTBAX.doc

Baxter O'Brien -- GT Multi-Purpose Referral Form
Statement of Concern

Baxter tested into the Hillsborough County school system's gifted program at the beginning of second grade. Throughout second and third grades and the gifted summer school program, Baxter thrived learning from his gifted resource teachers. A bright, determined learner, Baxter has a special fondness for math and science. In first and third grades, he was the school's grade level representative at the countywide science olympics.

A straight A student, Baxter enthusiastically embraces the creative and challenging gifted curriculum. He best sums up his approach to school in his winning campaign speech for class vice president: "Surely if you want somebody who works hard, you know I'm that person."

This attitude extends beyond the classroom. Baxter has been a gymnast since first grade, winning medals in statewide competition. Baseball is his favorite sport. This past year he was selected as an all-star for one of Tampa's most competitive leagues.

We look forward to further developing Baxter's special gifts and talents in Fairfax County's GT program.

GTGRIFF.doc

Griffen O'Brien -- GT Multi-Purpose Referral Form
Statement of Concern

Griffen has been in gifted programs since second grade. The programs have provided wonderful opportunities to channel Griffen's enthusiam and intellect. An

outgoing, ebullient boy, Griffen's fourth grade gifted resource teacher noted: "He's got so much swirling around in there, it bubbles over."

Computers and science are his love. A creative, hi-tech approach to a task truly engages him -- a power point book report, a claymation-type video for a geography assignment, a computer art project selected for a county art exhibit.

An avid reader, Griffen had the fourth highest overall score in his middle school's (grades 6, 7 and 8) accelerated reader program. He also was one of four sixth graders selected to represent his school at the districtwide math league competition. Equally as significant to Griffen was recognition as one of two "outstanding" band members for the sixth grade -- he loves his tenor sax!

We are excited about the opportunities Griffen will have in Fairfax County's GT program.

Resume

Dustin Paul Vannatter

Objective

To effectively idealize, implement, and analyze intriguing applications to improve overall business success.

Skills

- ASP
- .NET Architecture
- dHTML
- Java / JSP
- JavaScript
- WML
- CSS
- Photoshop
- Systems Analyst
- XML / XSL
- Visual Basic
- VBScript
- Perl
- PHP
- Illustrator
- Macromedia Flash
- MS SQL 7, 2000
- MySql
- PostgreSQL
- OpenBSD
- Linux
- Macintosh
- Windows 95/98/NT/XP
- Freehand

Experience

6/1995 – Present oh, hello Inc. Cleveland, OH

Founder / Lead Application Developer

Founder of multi-brand, large-scale network of web applications for individual developers and users. Development primarily done with PHP 4, MySQL 3.23, and Perl in an OpenBSD and Redhat split environment. Lead developer for an ever growing list of design and applications clients ranging from Capitol Records to Snowball.com. Please see www.ohhello.com/network.html for list of current projects.

Tools: PHP, Perl, ASP, ASP.NET, Java, JSP, JavaScript, MySQL, PostgreSQL, Shell Scripting, Linux, OpenBSD, Photoshop, Illustrator, Freehand

4/2002 – 10/2002 Real Estate Trading Systems, LLC.

Lead Application Developer

Responsible for managing development team and product specifications for a revolutionary real estate industry workflow application. Also responsible for core ASP and database architectures.

Tools: ASP, ASP.NET, SQL 2000, dHTML, CSS, JavaScript, PHP, Perl, Bugzilla, Project 2000, VSS, Photoshop, Illustrator, Freehand

9/1999 – 4/2002 PlanSoft, Inc. Twinsburg, OH

Senior Application Developer

Responsible for organizing and leading a team of developers in the production of multiple intranet applications involving the meeting and planning industry. Responsible for corporate XML/XSL implementation which lead to a multitude of new business leads.

Tools: ASP, VB, COM, XML, XSL, SQL, HTML, dHTML, CSS, JavaScript, Photoshop, Freehand, Homesite, Dreamweaver, Fireworks

10/1998 - 8/1999 Experian Inc. Lombard, IL

Application Developer

Responsible for developing intranet workflow software that interfaced ASP to COM to mainframe. Other projects included using VB to manage internal direct marketing list orders and quality assurance of list quality.

Tools: ASP, SQL, HTML, VB, dHTML, C++, CSS, JavaScript, Photoshop, Illustrator, Freehand

3/1998 – 10/1998 The Maxim Group Chicago, IL

Internet Systems Analyst

Systems Analyst for Metromail during consultant tenure. Responsible for analyzing current workflow, intranet ordering and processing systems, and list management software. Responsible for assigning development resources and organizing development goals.
Tools: ASP, COM, VB, JCL, PhotoShop, Illustrator, Pagemaker, Homesite

1/1996 – 3/1998 Lynk Media, Inc.
Akron, OH

Application / Web Developer

Web application developer, duties including website layout and design, SQL database administration, application management, and development leader. Recognized for creative user-interface designs for Fortune 500 companies including Goodyear and Timken.
Tools: ASP, HTML, Cold Fusion, MSSQL, JavaScript, PhotoShop, Illustrator, Pagemaker, Homesite

Education	1997-Current	University of Akron	Akron, OH

- Bachelor, Computer Science, attending

Brainbench Certified – Master PHP Programming
Brainbench Certified – Master dHTML/HTML

Interests	Computers, Biking, Automotives, Reading, Golfing

Affiliations	6/2000 – Present	World Wildlife Fund	Charter Member
	6/1999 – Present	BMW CCA	Member

$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$$
```

This document was written in Windows 95 Word Pad. The title above, and some of the text looks a little screwed up when read in anything else, so read it in Word Pad.

Anyway, for those of you who are wondering "what do the letters "LOA" under his handle stand for?" Well, LOA stands for Legion Of the Apocalypse, which is a group of elite hackers and phreakers in my area. The current members of LOA are:

Revelation, Phreaked Out, Hack Attack, Electric Jaguar, and Phreak Show

I started LOA when I discovered that there were many good hackers and phreakers in my area. I thought that an organized group of hackers and phreakers would accomplish much more than an individual could by himself. Thus the Legion Of the Apocalypse was formed and has been around for a while since. Our main goal is to show the public what hacking and phreaking is all about and to reveal confidential information to the hacking/phreaking community so that we can learn

more about computers, telephones, electronics, etc. We are hoping to get our own World Wide Web page soon, so keep an eye out for it. It will contain all of the hacking, phreaking, computer, telephone, security, electronics, virus, and carding information that you could possibly want.

Also, if some of you are wondering why I chose the word Revelation as my handle, well, Revelation means revealing or unveiling, which is exactly what I intend to do as a hacker/phreaker. I intend to reveal all the information that I can gather while hacking and phreaking.

Anyway, I wrote this document because I have read all the files that I could get my hands on and noticed that there has never been a really good file written that guided beginning hackers and phreakers step by step.

When I began hacking and started reading all of the beginner files, I still had many un-answered questions. My questions were eventually answered, but only through LOTS of reading and practice. In this file, I hope to give basic step by step instructions that will help beginning hackers and phreakers get started. But, DO NOT think that this will save you from having to read alot. If you want to be a hacker/phreaker, reading is the most important thing you can do. You will have to do ALOT of reading no matter what.

This document was intended for beginners, but it can also be used as a reference tool for advanced hackers and phreakers.

Please distribute this document freely. Give it to anyone that you know who is interested in hacking and/or phreaking. Post it on your World Wide Web page, Ftp sites, and BBS's. Do whatever you want with it as long as it stays UNCHANGED.

As far as I know, this is the most complete and in depth beginners guide available, that is why I wrote it. Also, I plan to have new volumes come out whenever there has been a significant change in the material provided, so keep an eye out for them. LOA is planning on starting an on-line magazine, so look for that too. And we are also starting a hacking business. Owners of businesses can hire us to hack into their systems to find the security faults. The name of this company is A.S.H. (American Security Hackers), and it is run by LOA. If you have any questions about this company, or would like to hire us, or just want security advice, please E-Mail A.S.H. at "an641839@anon.penet.fi".

This document is divided into three main sections with many different sub-sections in them. The Table Of Contents is below:

Table Of Contents:

K. Basic VAX/VMS hacking
L. Basic PRIME hacking
M. Password list
N. Connecting modems to different phone lines
O. Viruses, Trojans, and Worms

II. PHREAKING

A. What is phreaking?
B. Why phreak?
C. Phreaking rules
D. Where and how to start phreaking
E. Boxes and what they do
F. Red Box plans
G. Free calling from COCOT's
H. ANAC numbers

III. REFERENCE

A. Hacking and phreaking W.W.W. pages
B. Good hacking and phreaking text files
C. Hacking and phreaking Newsgroups
D. Rainbow Books
E. Hacking and phreaking magazines
F. Hacking and phreaking movies
G. Hacking and phreaking Gopher sites
H. Hacking and phreaking Ftp sites
I. Hacking and phreaking BBS's
J. Cool hackers and phreakers
K. Hacker's Manifesto
L. Happy hacking!

* DISCLAIMER *

"Use this information at your own risk. I Revelation, nor any other member of LOA, nor the persons providing this file, will NOT assume ANY responsibility for the use, misuse, or abuse, of the information provided herein. The following information is provided for educational purposes ONLY. The informaion is NOT to be used for illegal purposes. By reading this file you ARE AGREEING to the following terms: I understand that using this information is illegal. I agree to, and understand, that I am responsible for my own actions. If I get into trouble using this information for the wrong reasons, I promise not to place the blame on Revelation, LOA, or anyone that provided this file. I understand that this information is for educational purposes only. This file may be used to check your security systems and if you would like a thorough check contact A.S.H.

This file is basically a compilation of known hacking and phreaking information and some information gathered from my own experience as a hacker/phreaker. I have tried to make sure that everything excerpted from other documents was put in quotes and labeled with the documents name, and if known, who wrote it. I am sorry if any mistakes were made with quoted information."

-Revelation-
LOA

I. HACKING

A. What is hacking?

Hacking is the act of penetrating computer systems to gain knowledge about the system and how it works.

Hacking is illegal because we demand free access to ALL data, and we get it. This pisses people off and we are outcasted from society, and in order to stay out of prison, we must keep our status of being a hacker/phreaker a secret. We can't discuss our findings with anyone but other members of the hacking/phreaking community for fear of being punished. We are punished for wanting to learn. Why is the government spending huge amounts of time and money to arrest hackers when there are other much more dangerous people out there. It is the murderers, rapists, terrorists, kidnappers, and burglers who should be punished for what they have done, not hackers. We do NOT pose a threat to anyone. We are NOT out to hurt people or there computers. I admit that there are some people out there who call themselves hackers and who deliberately damage computers. But these people are criminals, NOT hackers. I don't care what the government says, we are NOT criminals. We are NOT trying to alter or damage any system. This is widely misunderstood. Maybe one day people will believe us when we say that all we want is to learn.

There are only two ways to get rid of hackers and phreakers. One is to get rid of computers and telephones, in which case we would find other means of getting what we want.(Like that is really going to happen.) The other way is to give us what we want, which is free access to ALL information. Until one of those two things happen, we are not going anywhere.

B. Why hack?

As said above, we hack to gain knowledge about systems and the way they work. We do NOT want to damage systems in any way. If you do damage a system, you WILL get caught. But, if you don't damage anything, it is very unlikely that you will be noticed, let alone be tracked down and arrested, which costs a considerable amount of time and money.

Beginners should read all the files that they can get their hands on about anything even remotely related to hacking and phreaking, BEFORE they start hacking. I know it sounds stupid and boring but it will definetly pay off in the future. The more you read about hacking and phreaking, the more unlikely it is that you will get caught. Some of the most useless pieces of information that you read could turn out to be the most helpful. That is why you need to read everything possible.

C. Hacking rules

1. Never damage any system. This will only get you into trouble.

2. Never alter any of the systems files, except for those needed to insure that you are not detected, and those to insure that you have access into that computer in the future.

3. Do not share any information about your hacking projects with anyone but those you'd trust with your life.

4. When posting on BBS's (Bulletin Board Systems) be as vague as possible when describing your current hacking projects. BBS's CAN be monitered by law enforcement.

5. Never use anyone's real name or real phone number when posting on a BBS.

6. Never leave your handle on any systems that you hack in to.

7. DO NOT hack government computers.

8. Never speak about hacking projects over your home telephone line.

9. Be paranoid. Keep all of your hacking materials in a safe place.

10. To become a real hacker, you have to hack. You can't just sit around reading text files and hanging out on BBS's. This is not what hacking is all about.

D. Getting started

The very first thing you need to do is get a copy of PKZIP or some other file unzipping utility. Nearly everything that you download from the Internet or from a BBS will be zipped. A zipped file is a file that has been compressed. Zipped files end with the extension ".zip".

Then you need to get yourself a good prefix scanner.(also known as a War Dialer) This is a program that automatically dials phone numbers beginning with the three numbers (prefix) that you specify. It checks to see if the number dialed has a carrier.(series of beeps that tells you that you have dialed a computer) Try and find a large business area prefix to scan. It is these businesses that have interesting computers. There are many good scanners out there, but I would recommend Autoscan or A-Dial. These are very easy to use and get the job done quickly and efficiently.

E. Where and how to start hacking

After you get yourself a good scanner, scan some prefixes and find some cool dialups, then do the following: From your terminal, dial the number you found. Then you should hear a series of beeps (carrier) which tells you that you are connecting to a remote computer. It should then say something like "CONNECT 9600" and then identify the system that you are on. If nothing happens after it says "CONNECT 9600" try hitting enter a few times. If you get a bunch of garbage adjust your

parity, data bits, stop bits, baud rate, etc., until it becomes clear.

That is one way of connecting to a remote computer. Another way is through Telenet or some other large network.

Telenet is a very large network that has many other networks and remote computers connected to it.

Ok, here is how you would connect to a remote computer through Telenet:

First, you get your local dialup(phone number) from the list that I have provided in Section G. Then you dial the number from your terminal and connect.(If you get a bunch of garbage try changing your parity to odd and your data bits to 7, this should clear it up.) If it just sits there hit enter and wait a few seconds, then hit enter again. Then it will say "TERMINAL=" and you type in your terminal emulation. If you don't know what it is just hit enter. Then it will give you a prompt that looks like "@". From there you type "c" and then the NUA (Network User Address) that you want to connect to. After you connect to the NUA, the first thing you need to do is find out what type of system you are on.(i.e. UNIX, VAX/VMS, PRIME, etc.)

There are other things that you can do on Telenet besides connecting to an NUA. Some of these commands and functions are listed in the next section.

You can only connect to computers which accept reverse charging. The only way you can connect to computers that don't accept reverse charging is if you have a Telenet account. You can try hacking these. To do this, at the "@" prompt type "access". It will then ask you for your Telenet ID and password.

Telenet is probably the safest place to start hacking because of the large numbers of calls that they get. Make sure you call during business hours (late morning or early afternoon) so there are many other people on-line.

F. Telenet commands

Here is a list of some Telenet commands and their functions. This is only a partial list. Beginners probably won't use these commands, but I put them here for reference anyway.

COMMAND	FUNCTION
c	Connect to a host.
stat	Shows network port.
full	Network echo.
half	Terminal echo.
telemail	Mail.(need ID and password)
mail	Mail.(need ID and password)
set	Select PAD parameters
cont	Continue.
d	Disconnect.
hangup	Hangs up.
access	Telenet account.(ID and password)

G. Telenet dialups

Here is the list of all the Telenet dialups that I know of in the U.S.A., including the city, state, and area code:

STATE,CITY:	AREA CODE:	NUMBER:
AL, Anniston	205	236-9711
AL, Birmingham	205	328-2310
AL, Decatur	205	355-0206

H. Telenet DNIC's

Here is the list of all the Telenet DNIC's. These will be defined and explained in the next section:

DNIC:	NETWORK:
02041	Datanet-1
02062	DCS
02080	Transpac
02284	Telepac (Switzerland)
02322	Datex-P (Austria)
02392	Radaus
02342	PSS
02382	Datapak (Denmark)
02402	Datapak (Sweden)
02405	Telepak
02442	Finpak
02624	Datex-P (West Germany)
02704	Luxpac
02724	Eirpak
03020	Datapac
03028	Infogram
03103	ITT/UDTS (U.S.A.)
03106	Tymnet
03110	Telenet
03340	Telepac (Mexico)
03400	UDTS (Curacau)
04251	Isranet
04401	DDX-P
04408	Venus-P
04501	Dacom-Net
04542	Intelpak
05052	Austpac
05053	Midas
05252	Telepac (Hong Kong)
05301	Pacnet
06550	Saponet
07240	Interdata
07241	Renpac
07421	Dompac
09000	Dialnet

I. Telenet NUA's

Here is a list of a few Telenet NUA's and what type of system

they are. But first, this is how an NUA is put together:

```
                031106170023700
                \   /\ /  \ /
                  |   |    |
                DNIC Area  NUA
                     Code
```

The DNIC says which network connected to Telenet you are using. The area code is the area code for the area that the NUA is in. And the NUA is the address of the computer on Telenet. Please note that an NUA does NOT have to be in your area code for you to connect to it.

There are two ways of finding useful NUA's. The first way is to get or write an NUA scanning program. The second way is to get a copy of the Legion Of Doom's Telenet Directory.(Volume 4 of the LOD Technical Journals)

Now, here is the list. Remember that these are only a few NUA's. These are NOT all of the Telenet NUA's. All of these NUA's DO accept reverse charging. Also, please note that all of these may not be working by the time you read this and that network congestion frequently makes an NUA inaccessible for a short period of time.

NUA:	SYSTEM TYPE:
031102010022500	VAX
031102010015600	UNIX
031102010022000	VAX

J. Basic UNIX hacking

UNIX is probably the most commonly used operating system on Telenet, and is the easiest to hack since it doesn't record bad login attempts. You know you've found a UNIX system when it gives you a "Login" prompt, and then a "Password" prompt. To get in you should first try the default logins.(Listed below.) If these don't work try some of the passwords listed in Section M. If these don't work try to find backdoors. These are passwords that may have been put in to allow the programmer (or someone else who could be in a position to make a backdoor) to get access into the system. These are usually not known about by anyone but the individual who made it. Try doing some research on the programmer and other people who helped to make the system. And, if these don't work, just try guessing them. The Login (usually the account holders name) has 1-8 characters and the Password is 6-8 characters. Both can be either letters or numbers, or a combination of the two.

Once you get in, you should get a "$" prompt, or some other special character like it. You should only use lower case letters when hacking UNIX, this seems to be standard format. If you type "man [command]" at the prompt, it should list all of the commands for that system. Anyway, here are the default Logins and Passwords:

Login:	Password:
root	root
root	system
sys	sys
sys	system
daemon	daemon
uucp	uucp
tty	tty
test	test
unix	unix
unix	test
bin	bin
adm	adm
adm	admin
admin	adm
admin	admin
sysman	sysman
sysman	sys
sysman	system
sysadmin	sysadmin
sysadmin	sys
sysadmin	system
sysadmin	admin
sysadmin	adm
who	who

```
learn                           learn
uuhost                          uuhost
guest                           guest
host                            host
nuucp                           nuucp
rje                             rje
games                           games
games                           player
sysop                           sysop
root                            sysop
demo                            demo
```

Once you are in, the first thing that you need to do is save the password file to your hard drive or to a disk. The password file contains the Logins and Passwords. The passwords are encoded. To get the UNIX password file, depending on what type of UNIX you are in, you can type one of the following things:

```
/etc/passwd
or
cat /etc/passwd
```

The first one is the standard command, but there are other commands as well, like the second one. Once you get the password file, it should look like this:

```
john:234abc56:9999:13:John Johnson:/home/dir/john:/bin/john
```

Broken down, this is what the above password file states:

```
Username: john
Encrypted Password: 234abc56
User Number: 9999
Group Number: 13
Other Information: John Johnson
Home Directory: /home/dir/john
Shell: /bin/john
```

If the password file does not show up under one of the above two commands, then it is probably shadowed.

The following definition of password shadowing was taken from the alt.2600 hack faq:

"Password shadowing is a security system where the encrypted password field is replaced with a special token and the encrypted password is stored in a seperate file which is not readable by normal system users."

If the password file is shadowed, you can find it in one of the following places, depending on the type of UNIX you are using:

```
UNIX System Type:       Path:                                   Token:
```

AIX 3 or	/etc/security/passwd /tcb/auth/files/<first letter of username>/<username>	! #
A/UX 3.Os	/tcb/files/auth/*	
BSD4.3-Reno	/etc/master.passwd	*
ConvexOS 10	/etc/shadpw	*
Convex0S 11	/etc/shadow	*
DG/UX	/etc/tcb/aa/user	*
EP/IX	/etc/shadow	x
HP-UX	/.secure/etc/passwd	*
IRIX 5	/etc/shadow	x
Linux 1.1	/etc/shadow	*
OSF/1	/etc/passwd[.dir|.pag]	*
SCO UNIX #.2.x	/tcb/auth/files/<first letter of username>/<username>	*
SunOS 4.1+c2	/etc/security/passwd.adjunct	##
SunOS 5.0	/etc/shadow	
System V 4.0	/etc/shadow	x
System V 4.2	/etc/security/* database	
Ultrix 4	/etc/auth[.dir|.pag]	*
UNICOS	/etc/udb	*

Some passwords can only be used for a certain amount of time without having to be changed, this is called password aging. In the password file example below, the "C.a4" is the password aging data:

```
bob:123456,C.a4:6348:45:Bob Wilson:/home/dir/bob:/bin/bob
```

The characters in the password aging data stand for the following:

1. Maximum number of weeks a password can be used without changing.
2. Minimum number of weeks a password must be used before being changed.
3&4. Last time password was changed, in number of weeks since 1970.

The password aging data can be decoded using the chart below:

Character:	Number:
.	0
/	1
0	2
1	3
2	4
3	5
4	6
5	7
6	8
7	9

y	62
z	63

Now, explore the system freely, be careful, and have fun!

K. Basic VAX/VMS hacking

The VAX system runs the VMS (Virtual Memory System) operating system. You know that you have a VAX system when you get a "username" prompt. Type in capital letters, this seems to be standard on VAX's. Type "HELP" and it gives you all of the help that you could possibly want. Here are the default usernames and passwords for VAX's:

Username:	Password:
SYSTEM	OPERATOR
SYSTEM	MANAGER
SYSTEM	SYSTEM
SYSTEM	SYSLIB
OPERATOR	OPERATOR
SYSTEST	UETP
SYSTEST	SYSTEST
SYSTEST	TEST
SYSMAINT	SYSMAINT
SYSMAINT	SERVICE
SYSMAINT	DIGITAL
FIELD	FIELD
FIELD	SERVICE
GUEST	GUEST
GUEST	unpassworded
DEMO	DEMO
DEMO	unpassworded
TEST	TEST
DECNET	DECNET

Here are some of the VAX/VMS commands:

Command:	Function:
HELP (H)	Gives help and list of commands.
TYPE (T)	View contents of a file.
RENAME (REN)	Change name of a file.
PURGE (PU)	Deletes old versions of a file.

PRINT (PR)	Prints a file.
DIRECTORY (DIR)	Shows list of files.
DIFFERENCES (DIF)	Shows differences between files.
CREATE (CR)	Creates a file.
DELETE (DEL)	Deletes a file.
COPY (COP)	Copy a file to another.
CONTINUE (C)	Continues session.

The password file on VAX's are available when you type in the command:

SYS$SYSTEM:SYSUAF.DAT

The password file on most VAX's are usually not available to normal system users, but try it anyway. If the default logins don't work, use the same means of finding one as stated in Section J.

Be VERY careful when hacking VAX's becuase they record every bad login attempt. They are sometimes considered one of the most secure systems. Because of this, I advise not to try hacking these until you are more advanced.

But, when you are an advanced hacker, or if you are already an advanced hacker, I advise that you try a few passwords at a time and then wait and try a few more the next day and so on, because when the real user logs on it displays all of the bad login attempts.

L. Basic PRIME hacking

PRIME computer systems greet you with "Primecon 18.23.05", or something like it, when you connect. You should type in capital letters on this system, too. Once you connect, it will usually just sit there. If this happens, type "LOGIN <USERNAME>". It should then ask you for your username and password. The default usernames and passwords are listed below:

Username:	Password:
PRIME	PRIME
PRIME	PRIMOS
PRIMOS	PRIMOS
PRIMOS	PRIME
PRIMOS_CS	PRIME
PRIMOS_CS	PRIMOS
PRIMENET	PRIMENET
SYSTEM	SYSTEM
SYSTEM	PRIME
SYSTEM	PRIMOS
NETLINK	NETLINK
TEST	TEST
GUEST	GUEST
GUEST1	GUEST

When you are inside the system, type "NETLINK" and it ahould give you alot of help. This system uses NUA's, too. I might print these in the next volume.

M. Password List

The password list was taken from A Novice's Guide To Hacking, by The Legion Of Doom, and from some of my own discoveries. Here is the list of commonly used passwords:

Password:

aaa

N. Connecting modems to different phone lines

Ok, if you are really paranoid (or smart) and you don't want to hack from your house for fear of getting caught, you can hook up your modem to other peoples phone lines or to payphones.

If you want to hook your modem to a payphone, do it late at night and at a very secluded payphone. Look along either side of the phone. You should see a small metal tube (which contains the telephone wires) running along the wall. Somewhere along the tube it should widen out into a small box. Pop off the boxes lid and there is a nice little phone jack for ya'. Taking off the lid may be difficult because they are usually pretty secure, but nothing is impossible, so keep trying. Of course, you can only do this with a lap-top computer.

Now, if you want to hook up the modem to someone's house or appartment phone line, you need to get a pair of red and green alligator clips, and an extra modem cord for your lap-top.

After you get those parts, cut the plastic end off of your modem cord and you will see a red wire, a green wire, and two other wires, but you can ignore those. Attach the red alligator clip to the red wire, and attach the green alligator clip to the green wire and you're all set. Now all you need to do is go find a telephone pole or one of those small green boxes that stick out of the ground.(They should have a Bell Systems logo on them.)

On a telephone pole open the little box that has a bunch of wires going to and from it. On the right side of the box you should see what look like two large screws.(These are called "terminals".) One should have a red wire wrapped around it and the other should have a green wire wrapped around it. Attach the red alligator clip the the red wire and the green alligator clip to the green wire, and you're all set. This should get you a dial tone. If it doesn't, make sure that the alligator clips are not touching each other, and that the alligator clips are attached to the exposed end of the wire.

Now, on those green boxes you need to undo all of the screws and shit holding the lid on, and open it up. Then you should find basically the same setup as in the telephone pole. Attach the appropriate wires to the appropriate terminals and you are all set.

This process can also be used to hook up a Beige Box (Lineman's Handset.) when phreaking.

O. Viruses, Trojans, and Worms

Just in case some of you are interested, here are the definitions for Viruses, Trojans, and Worms. These definitions were taken from the alt.2600 hack faq.

Trojan:

"Remember the Trojan Horse? Bad guys hid inside it until they could get into the city to do their evil deed. A Trojan computer program is similiar. It is a program which does an unauthorized function, hidden inside an authorized program. It does something other than it claims to

do, usually something malicious (although not necessarily!), and it is intended by the author to do whatever it does. If it is not intentional, it is called a bug or, in some cases, a feature :) Some Virus scanning programs detect some Trojans. Some scanning programs don't detect any Trojans. No Virus scanners detect all Trojans."

Virus:

"A Virus is an independent program which reproduces itself. It may attach itself to other programs, it may create copies of itself (as in companion Viruses). It may damage or corrupt data, change data, or degrade the performance of your system by utilizing resources such as memory or disk space. Some Viruse scanners detect some Viruses. No Virus scanners detect all Viruses. No Virus scanner can protect against any and all Viruses, known and unknown, now and forevermore."

Worm:

"Made famous by Robert Morris, Jr., Worms are programs which reproduce by copying themselves over and over, system to system, using up resources and sometimes slowing down the system. They are self contained and use the networks to spread, in much the same way that Viruses use files to spread. Some people say the solution to Viruses and worms is to just not have any files or networks. They are probably correct. We could include computers."

II. PHREAKING

A. What is phreaking

Phreaking is basically hacking with a telephone. Using different "boxes" and "tricks" to manipulate the phone companies and their phones, you gain many things, two of which are: knowledge about telephones and how they work, and free local and long distance phone calls. In the following sections, you will learn some about boxes, what they are, and how they work. You will also learn about the other forms of phreaking.

B. Why phreak?

Phreaking, like hacking, is used to gather information about telephones, telephone companies, and how they work. There are other benefits as well. As stated above, you also get free phone calls. But, these are used mainly to gather more information about the phones, and to allow us free access to all information.

C. Phreaking rules

Most of the same rules apply for hacking and phreaking, so I will only list a few here.

1. Never box over your home phone line.
2. You should never talk about phreaking projects over your home phone line.
3. Never use your real name when phreaking.
4. Be careful who you tell about your phreaking projects.
5. Never leave phreaking materials out in the open. Keep them in a safe place.
6. Don't get caught.

D. Where and how to start phreaking

Well, you can phreak on any telephone, but as stated above, it is very stupid to do so on your home phone line.

First you need you need to construct the boxes needed for what you want to do. All of the boxes and their descriptions are listed in the next section. Most of the boxes are very easy to make, but if your not into making shit, there are usually alternative ways of making them.

E. Boxes and what they do

Box:	Description:
Red Box	generates tones for free phone calls
Black Box	when called, caller pays nothing
Beige Box	lineman's handset
Green Box	generates coin return tones
Cheese Box	turns your phone into a payphone
Acrylic Box	steal 3-way calling and other services
Aqua Box	stops F.B.I. lock-in-trace
Blast Box	phone microphone amplifier
Blotto Box	shorts out all phones in your area
Blue Box	generates 2600hz tone
Brown Box	creates party line
Bud Box	tap neighbors phone
Chatreuse Box	use electricity from phone
Chrome Box	manipulates traffic signals

Clear Box	free calls
Color Box	phone conversation recorder
Copper Box	causes crosstalk interference
Crimson Box	hold button
Dark Box	re-route calls
Dayglo Box	connect to neighbors phone line
Divertor Box	re-route calls
DLOC Box	create party line
Gold Box	dialout router
Infinity Box	remote activated phone tap
Jack Box	touch-tone key pad
Light Box	in-use light
Lunch Box	AM transmitter
Magenta Box	connect remote phone line to another
Mauve Box	phone tap without cutting into the line
Neon Box	external microphone
Noise Box	creates line noise
Olive Box	external ringer
Party Box	creates party line
Pearl Box	tone generator
Pink Box	creates party line
Purple Box	hold button
Rainbow Box	kill trace
Razz Box	tap neighbors phone
Rock Box	add music to phone line
Scarlet Box	causes interference

Silver Box	create DTMF tones for A,B,C, and D
Static Box	raises voltage on phone line
Switch Box	add services
Tan Box	phone conversation recorder
TV Cable Box	see sound waves on TV
Urine Box	create disturbance on phone headset
Violet Box	stop payphone from hanging up
White Box	DTMF key pad
Yellow Box	add line extension

F. Box Plans

The Red Box is the main tool that you will use so I have included the Red Box plans. The other box plans can be downloaded from the Internet.

Red Box:

There are two ways that you can make a Red Box:

One is to go to Radio Shack and buy a tone dialer and a 6.5536Mhz crystal.(If Radio Shack doesn't have the crystal, you can order them from the electronics companies that I have listed at the end of this section.) Open up the tone dialer and replace the existing crystal (big, shiny, metal thing labeled "3.579545Mhz") with the 6.5536Mhz crystal. Now, close it up. You have a red box.

To use it for long distance calls play the tones that add up to the amount of money that the operator requests. For a 25 cents tone press 5 *'s. For a 10 cents tone press 3 *'s. For a 5 cents tone press 1 *.

And, the second way, which is a much easier method, is to get the Red Box tones from a phreaking program, such as: Omnibox, or Fear's Phreaker Tools. Play the tones as you hold a microcassette recorder about 1-inch away from your computer speakers, and record the tones.

The Red Box only works on public telephones, it does not work on COCOT's.(Defined in next section.) It makes the telephone think that you have put money in. Red Boxes do not work on local calls because the phone is not using ACTS (Automated Coin Toll System), unless you call the operator and have her place the call for you. You tell her the number that you want to dial and then when she asks you to put in your money, play the tones. If she asks you why you need her to place the

call tell her that one of the buttons is smashed in or something like that. You now have and know how to use a Red Box!

Electronics Companies:

Alltronics
2300 Zanker Road
San Jose, CA 95131
(408)943-9774 -Voice-
(408)943-9776 -Fax-

Blue Saguaro
P.O. Box 37061
Tucson, AZ 85740

Mouser
(800)346-6873

Unicorn Electronics
10000 Canoga Ave. Unit C-2
Chatsworth, CA 91311
1-800-824-3432

G. Free calling from COCOT's

First of all, COCOT stands for "Customer Owned Customer Operated Telephone". These are most likely to be found at resteraunts, amusement parks, etc.

All you have to do to make a free call from a COCOT is dial a 1-800 number (they let you do this for free), say some bullshit and get them to hang up on you. Stay on the line after they hang up, then dial the number that you want to call.

This may not work by the time you read this because COCOT owners are becoming more aware of us every day.

H. ANAC numbers

ANAC stands for "Automated Number Announcment Circuit". In other words, you call the ANAC number in your area and it tells you the number that you are calling from. This is useful when Beige Boxing, or hooking your modem up to other phone lines, to find out what number you are using. The "?" are substituted for unknown numbers. Do some scanning to find them out. Here are the ANAC numbers for the U.S.A. with their area code, and the only one I knew of in the U.K.:

U.S.A.:

Area Code:	ANAC Number:
201	958

B. Good hacking and phreaking text files

All of these files are available by download from the Internet.

File Name:

A Novice's Guide To Hacking

Alt.2600 Hack Faq

The Hacker's Handbook

The Official Phreaker's Manual

Rainbow Books (Listed in Section D.)

The Hacker Crackdown

Computer Hackers: Rebels With A Cause

The Legion Of Doom Technical Journals

The Ultimate Beginner's Guide To Hacking And Phreaking (Of course!)

C. Hacking and phreaking Newsgroups

alt.2600
alt.2600.hope.tech
alt.cellular
alt.cellular-phone-tech
alt.comp.virus
alt.cracks
alt.cyberpunk
alt.cyberspace
alt.dcom.telecom
alt.fan.lewiz
alt.hackers
alt.hackintosh
alt.hackers.malicious
alt.security

D. Rainbow Books

The Rainbow Books are a series of government evaluations on various things related to computer system security. You can get all of

the existing Rainbow Books free and if you ask to be put on their mailing list you will get each new one as it comes out. Just write to the address or call the number below:

Infosec Awareness Division
ATTN: x711/IAOC
Fort George G. Meade, MD 20755-6000

or call:
(410)766-8729

Here is the list of all the Rainbow Books and their descriptions:

Color:	Description:
Orange 1	D.O.D. Trusted Computer Systems
Green	D.O.D. Password Management
Yellow	Computer Security Requirements
Yellow 2	Computer Security Requirements
Tan	Understanding Audit In Trusted Systems
Bright Blue	Trusted Product Evaluation
Neon Orange	Understanding Discretionary Access
Teal Green	Glossary Of Computer Terms
Orange 2	Understanding Configurations
Red	Interpretation Of Evaluation
Burgundy	Understanding Design Documentation
Dark Lavender	Understanding Trusted Distrobution
Venice Blue	Computer Security Sub-Systems
Aqua	Understanding Security Modeling
Dark Red	Interpretations Of Environments
Pink	Rating Maintenence Phase
Purple	Formal Verification Systems
Brown	Understanding Trusted Facilities
Yellow-Green	Writing Trusted Facility Manuals
Light Blue	Understanding Identification And Authentication In Trusted Systems

Blue	Product Evaluation Questionaire
Gray	Selecting Access Control List
Lavander	Data Base Management Interpretation
Yellow 3	Understanding Trusted Recovery
Bright Orange	Understanding Security Testing
Purple 1	Guide To System Procurement
Purple 2	Guide To System Procurement
Purple 3	Guide To System Procurement
Purple 4	Guide To System Procurement
Green	Understanding Data Remanence
Hot Peach	Writing Security Features
Turquiose	Understanding Information Security
Violet	Controlled Access Protection
Light Pink	Understanding Covert Channels

E. Cool hacking and phreaking magazines

Phrack Magazine

2600 Magazine

Tap Magazine

Phantasy Magazine

F. Hacking and phreaking movies

Movie:

Hackers

War Games

G. Hacking and phreaking Gopher sites

Address:

ba.com
csrc.ncsl.nist.gov
gopher.acm.org
gopher.cpsr.org
gopher.cs.uwm
gopher.eff.org
oss.net
spy.org
wiretap.spies.com

H. Hacking and phreaking Ftp sites

Address:

2600.com
agl.gatech.edu/pub
asylum.sf.ca.us
clark.net/pub/jcase
ftp.armory.com/pub/user/kmartind
ftp.armory.com/pub/user/swallow
ftp.fc.net/pub/defcon/BBEEP
ftp.fc.net/pub/phrack
ftp.giga.or.at/pub/hacker
ftp.lava.net/users/oracle
ftp.microserve.net/ppp-pop/strata/mac
ftp.near.net/security/archives/phrack

ftp.netcom.com/pub/daemon9
ftp.netcom.com/pub/zz/zzyzx
ftp.primenet.com/users/k/kludge

I. Hacking and phreaking BBS's

BBS's are Bulletin Board Systems on which hackers and phreakers can post messages to each other.

Here is a list of some BBS's that I know of. If you know of any other BBS's, please E-Mail me via the A.S.H. E-Mail address. Also, Please note that some of these may be old and not running.

Area Code:	Phone Number:	Name:
203	832-8441	Rune Stone
210	493-9975	The Truth Sayer's Domain
303	343-4053	Hacker's Haven
315	656-5135	Independent Nation
315	656-5135	UtOPiA
617	855-2923	Maas-Neotek
708	676-9855	Apocalypse 2000
713	579-2276	KOdE AbOdE
806	747-0802	Static Line
908	526-4384	Area 51

502	499-8933	Blitzkrieg
510	935-5845	...Screaming Electron
408	747-0778	The Shrine
708	459-7267	The Hell Pit
415	345-2134	Castle Brass
415	697-1320	7 Gates Of Hell

J. Cool hackers and phreakers

Yes there are many, many, cool hackers and phreakers out there, but these are some that helped me to get this file out on the Internet. I did not list a few people because I only knew their real name, and I don't want to use their real name without their permission.

Handle:

Silicon Toad

Logik Bomb/Net Assasin

oleBuzzard

Lord Somer

Weezel

Thanks for your help guys.

K. Hacker's Manifesto

"This is our world now...the world of the electron and the switch, the beauty of the baud. We make use of a service already existing without paying for what could be dirt cheep if it wasn't run by profiteering gluttons, and you call us criminals. We explore...and you call us criminals. We exist without skin color, without nationality, without religious bias...and you call us criminals. You build atomic bombs, wage wars, murder, cheat, and lie to us and try to make us believe it is for our own good, yet we're the criminals.

Yes, I am a criminal. My crime is that of curiosity. My crime is that of judging people by what they say and think, not what they look like. My crime is that of outsmarting you, something that you will never forgive me for. I am a hacker and this is my manifesto. You may stop this individual, but you can't stop us all...after all, we're all alike."

+++The Mentor+++

```
K. Happy hacking!

      Be careful and have fun. Remember to keep your eye out for the
next volume of
      The Ultimate Beginner's Guide To Hacking And Phreaking and the
Legion Of the Apocalypse
      W.W.W. page. Oh, and keep looking for our on-line magazine, too,
it should be coming out
      soon. Well, I hope you enjoyed the file and found it informative.
I also hope that I
      helped get you started in hacking and phreaking.

                        "The Revelation is here."

                             *-Revelation-*
                                LOA--ASH

EOF
```

fat32.img-Sector194041.txt

```
 that when you rename a long name, VFAT changes the short name from
;   foobar~1 to foobar~2.  To avoid this, we introduce hacks in the form
of
;   intermediate renames
HKLM,SOFTWARE\Microsoft\Windows\CurrentVersion\RenameFiles\AppFilesRoot,
,,%24%
