```

1. Source of Trace.

My network

2. Detect was generated by:

Windump filter. The filter used was:

"tcp and (tcp[13] & 0x20 !=0) and (tcp[13] & 0x0A !=0) and (tcp[13] & 0x01 !=0)"

Fields explanation:

```

15:07:26.935869[timestamp] scanner2.49903[source_ip.source_port] >
mynetwork.333[destination_ip.destination_port]: FP[flag] 0:0(0)
[beginning_sequence_number]: [ending_sequence_number](number of packets) win
4096[window_size] urg[urg_flag] 0 (DF) [don't_fragment]

```

3. Probability the source address was spoofed:

Yes. One of the scanner IP is real and the other is spoofed.

The source IP range: 64.231.232.x, this network is belong to Bell Nexxia. This is likely an ADSL user from Bell,

4. Description of attack:

This is a X'mas Tree stealth scan. It is likely that a bad guy was using a scan tool like nmap doing the scan to my network. Another IP address was spoofed to hide him. This is likely the decoy option was set to do the nmap scan.

5. Attack mechanism:

The attack works by sending the packet with setting the URG-PUSH-FIN flag to try to figure out what ports are opened what are not. In a Unix machine, an open port will be silence and a close port will send back a reset.

Unfortunately for the attacker, the machine his/she was attacked is a Windows box. The windows box will reply a reset back whether the port is opening or not.

However, the attack spoofed another IP address on the same network, we can not tell which IP address originated the scanning.

6. Correlations:

This detect is called X'mas Tree scan. It can be generated from nmap. If the decoy option is set the same packets with other IP address(es) will be generated and hide the attack's real address into the one or many other spoofed addresses. Please refer www.nmap.org for more information.

7. Evidence of active targeting:

A specified Windows NT host, mynetwork, was scanned at lots of ports. The source port number is the same for both scanners. It is most likely that one of the source IP addresses is spoofed.

8. Severity:

$(\text{Criticality} + \text{Lethality}) - (\text{System Countermeasures} + \text{Network Countermeasures}) = \text{Severity}$

$(4+4) - (4+1) = 1.$

9. Defensive recommendation:

Defenses are fine. Using the **established** rule of Cisco ACL, the scan can be blocked

10. Multiple choice test question:

Which of the following is most likely shown in the trace above?

- a) SYN/FIN attack
- b) X'mas tree scan
- c) FIN Scan
- d) Simultaneous Network Mapping

b

14:30:39.418837 ping.com > mynetwork: (frag 28572:480@65120+)

1. Source of Trace.

My network

2. Detect was generated by:

Tcpdump with filter

'((ip[6:1] & 0x20 != 0) and (ip[6:2] & 0x1fff = 0)) or ((ip[6:1] & 0x20 = 0) and (ip[6:2] & 0x1fff != 0))'

3. Probability the source address was spoofed:

Possible. The IP address of the host mynetwork in my network may also be spoofed to attack another host.

4. Description of attack:

This is the Denial of Service attack against mynetwork, Ping o' Death Attack. Normal ping-of-death uses ECHO REQUEST. However, this one uses ECHO REPLY. Some specific tool was used to craft the packet.

5. Attack mechanism:

The attack uses special tools to generate these impossible packets. The fragments do not contiguous There is 1000 bytes lag between. The packet will exceed 65535 bytes after the fragments reassembled in the destination host, mynetwork.

Because no network device will reassemble the fragments, and even not all the firewalls will reassemble the fragments. The fragments just pass the all the network devices until they reach the destination host. When target receives the fragment, it will reassemble them and may exceed its buffer causing the system hang or crash. In additional, the first packet is stamped with echo reply, many firewall administrator will let the echo reply ping pass through, it may pass the firewall.

6. Correlations:

Ping o' Death Attack was taught by the SANS. It can be found on "3.2 Intrusion Detection and Packet Filtering: How It Works"

The more information can be found at:

<http://www.pp.asu.edu/support/ping-o-death.html>

<http://www.dfm.dtu.dk/netware/pingod/ping.html>

7. Evidence of active targeting:

The host, mynetwork, was attack by Ping o' Death.

8. Severity:

(Criticality + Lethality) – (System Countermeasures + Network Countermeasures) = Severity

(4+4) – (3+5) = 0

9. Defensive recommendation:

Defenses are fine. Attack will be blocked by firewall

However, some of the firewalls may not check the fragment packet. If it also let ping reply come in, there will be a problem.

10. Multiple choice test question:

Which of the following state is most likely wrong?

- a) Ping o' Death packet may not overlap properly.
- b) Ping o' Death can be a TCP packet
- c) Ping o' Death has a total packet length more than 65535 after reassemble
- d) Ping o' Death must be echo request icmps.

d

5. Attack mechanism:

The attack guesses the password of a common account "guest", or "anonymouse". Download the /etc/passwd file which has all the account information. Then tries to guess the root password. The attack may come back to guess the password for the other account and try to get into the server.

6. Correlations:

A good password for every account in the server is essential to the safety of the server.

Refer to the security manual to create a 'good' password for all the users.

7. Evidence of active targeting:

The bad guy broke into the host with the "guest" account, tried to do more. He/She may come back again...

8. Severity:

(Criticality + Lethality) – (System Countermeasures + Network Countermeasures) = Severity

(4+5) – (4+1) = 4

9. Defensive recommendation:

If the inbound ftp service can be denied for the server, put the server back to the firewall with inbound ftp deny policy can block this attack.

However, if this is an ftp server, like the server on my network, build a good password ruler, delete non-using account may help.

Snort IDS or other IDS with content check can find this attack.

10. Multiple choice test question:

Which of the following password ruler may not mandatory?

- a) The password should not be found in a dictionary.
- b) The password should at least 6 characters long.
- c) The password should be expired for a certain time
- d) The password should not be the same as the other user's password.

d

=====

=====

3. Probability the source address was spoofed:

Low

4. Description of attack:

This attack attempts to cause e-mail servers to execute programs on the attacker's behalf, may result in system compromise.

5. Attack mechanism:

SMTP is the most widely used mail transfer protocol, and is potentially vulnerable to many attacks. This is especially true of sendmail, one implementation of the SMTP protocol.

Older versions of sendmail allow delivery of bounced mail to programs. If a message is undeliverable, sendmail will attempt to return it to the sender. If the sender is '|', sendmail spawns the program (usually as user daemon) and passes on the mail message as input. The user that sendmail uses to spawn programs is specified in the 'u' option, which defaults to user daemon (uid 1) if not specified. An attacker can spoof the 'sender' field, and then intentionally bounce mail to exploit this vulnerability.

This sendmail vulnerability allows attackers to execute commands on a target machine.

6. Correlations:

Refer to CERT(sm) Advisory CA-96.20

<http://www.securityfocus.com/archive/1/5432>

7. Evidence of active targeting:

The signature word "to bounce" is found.

8. Severity:

(Criticality + Lethality) – (System Countermeasures + Network Countermeasures) = Severity

(4+4) – (3+1) = 4

9. Defensive recommendation:

Snort IDS or other IDS with content check can find this attack.

10. Multiple choice test question:

Which of the following is most likely shown in the trace above?

- a) Smail attack.
- b) Normal e-mail traffic.
- c) Sendmail decode alias.
- d) Sendmail Reconnaissance.

a

Assignment 2 – "Analyze This" Scenario

1. Overview

We have been asked to provide a bid for security services to GIAC Enterprises, an e-business startup that sells electronic fortune cookie sayings. We have been provided with one month's worth of data from a Snort system with a fairly standard rulebase. These files are from Sept. 26 to Nov.22. From time to time, the power has failed or the disk was full so we do not have data for all days.

Our task is to analyze the data. Be especially alert for signs of compromised systems or network problems and produce an analysis report.

There are 3 parts of the source files, the snort alert files, the snort OS check files and the snort scan files. These files are listed below:

1.1 Snort alert files, sorted by the date and delete the redundant file SnortA19.txt:

File	Date
SnortA15.txt	26-Sep
SnortA13.txt	27-Sep
SnortA12.txt	28-Sep
SnortA9.txt	30-Sep
SnortA8.txt	1-Oct
SnortA4.txt	2-Oct
SnortA1e.txt	3-Oct
SnortA2.txt	4-Oct
SnortA28.txt	5-Oct
SnortA26.txt	6-Oct
SnortA25.txt	7-Oct
SnortA22.txt	8-Oct
SnortA14.txt	9-Oct
SnortA10.txt	10-Oct
SnortA23.txt	11-Oct
SnortA20.txt	12-Oct
SnortA7.txt	13-Oct
SnortA5.txt	14-Oct
SnortA11.txt	15-Oct
SnortA3.txt	16-Oct
SnortA42.txt	18-Oct
SnortA40.txt	19-Oct
SnortA31.txt	20-Oct
SnortA33.txt	21-Oct
SnortA38.txt	22-Oct
SnortA35.txt	23-Oct
SnortA29.txt	24-Oct
SnortA27.txt	25-Oct
SnortA21.txt	26-Oct
SnortA24.txt	27-Oct
SnortA36.txt	28-Oct
SnortA39.txt	29-Oct
SnortA34.txt	30-Oct
SnortA30.txt	31-Oct

SnortA6.txt	1-Nov
SnortA37.txt	3-Nov
SnortA43.txt	4-Nov
SnortA41.txt	5-Nov
SnortA44.txt	6-Nov
SnortA32.txt	7-Nov
SnortA53.txt	8-Nov
SnortA52.txt	9-Nov
SnortA46.txt	10-Nov
SnortA48.txt	11-Nov
SnortA51.txt	12-Nov
SnortA49.txt	13-Nov
SnortA45.txt	14-Nov
SnortA59.txt	16-Nov
SnortA55.txt	17-Nov
SnortA57.txt	19-Nov
SnortA54.txt	20-Nov
SnortA50.txt	21-Nov
SnortA47.txt	22-Nov

1.2 Snort OS check files, sorted by the date and delete the old file OOScheck.txt (17-Aug):

Files	Date
OOSche6.txt	1-Oct
OOSche3.txt	2-Oct
OOSche2.txt	3-Oct
OOSche29.txt	4-Oct
OOSche24.txt	7-Oct
OOSche25.txt	10-Oct
OOSche10.txt	14-Oct
OOSche7.txt	18-Oct
OOSche34.txt	23-Oct
OOSche4.txt	26-Oct
OOSche5.txt	26-Oct
OOSche44.txt	3-Nov
OOSche46.txt	4-Nov
OOSche17.txt	7-Nov
OOSche45.txt	10-Nov
OOSche50.txt	11-Nov
OOSche20.txt	22-Nov
OOSche19.txt	23-Nov

1.3 Snort scan files, sorted by the date and delete the redundant file SnortS23.txt:

File	Date
SnortS14.txt	27-Sep
SnortS11.txt	28-Sep
SnortS10.txt	30-Sep
SnortS7.txt	1-Oct
SnortS5.txt	2-Oct
SnortSca.txt	3-Oct
SnortS27.txt	5-Oct

SnortS20.txt	7-Oct
SnortS21.txt	8-Oct
SnortS13.txt	9-Oct
SnortS8.txt	10-Oct
SnortS22.txt	11-Oct
SnortS12.txt	12-Oct
SnortS6.txt	13-Oct
SnortS4.txt	14-Oct
SnortS9.txt	15-Oct
SnortS2.txt	16-Oct
SnortS41.txt	18-Oct
SnortS39.txt	19-Oct
SnortS32.txt	21-Oct
SnortS37.txt	22-Oct
SnortS36.txt	23-Oct
SnortS30.txt	24-Oct
SnortS24.txt	25-Oct
SnortS15.txt	26-Oct
SnortS35.txt	28-Oct
SnortS38.txt	29-Oct
SnortS33.txt	30-Oct
SnortS31.txt	31-Oct
SnortS3.txt	1-Nov
SnortS45.txt	2-Nov
SnortS34.txt	3-Nov
SnortS42.txt	4-Nov
SnortS16.txt	7-Nov
SnortS47.txt	10-Nov
SnortS49.txt	11-Nov
SnortS48.txt	13-Nov
SnortS17.txt	14-Nov
SnortS56.txt	17-Nov
SnortS58.txt	18-Nov
SnortS18.txt	23-Nov

2. Detects Summaries

2.1 SnortSnarf Summary

110457 alerts found among the files:

- alert1

Earliest alert at **00:00:52.873106** on 09/26

Latest alert at **23:32:20.988483** on 11/22

Signature (click for definition)	# Alerts	# Sources	# Destinations
Happy 99 Virus	2	2	2
Tiny Fragments - Possible Hostile Activity	7	5	6
SITE EXEC - Possible wu-ftpd exploit - GIAC000623	13	4	7
External RPC call	13	8	3
Probable NMAP fingerprint attempt	15	14	13
connect to 515 from inside	56	2	3
SUNRPC highport access!	60	13	12

NMAP TCP ping!	96	21	20
Queso fingerprint	142	29	58
SMB Name Wildcard	218	33	33
Null scan!	277	204	196
SNMP public access	468	23	1
Back Orifice	1697	40	932
Broadcast Ping to subnet 70	1813	216	1
Attempted Sun RPC high port access	2542	20	33
TCP SMTP Source Port traffic	2893	4	2836
WinGate 1080 Attempt	4764	570	2655
Watchlist 000222 NET-NCFC	8134	45	26
Watchlist 000220 IL-ISDN-990517	30997	61	108
SYN-FIN scan!	56250	30	25751

The redundant alerts "SITE EXEC - Possible wu-ftpd exploit - GIAC000623" and "site exec - Possible wu-ftpd exploit - GIAC000623" were combined.

The log begins at:	09 26 00:00:52
The log ends at:	11 22 23:32:20
Total events:	110491
Signatures recorded:	21
Source IP recorded:	1325
Destination IP recorded:	26675

3. Detection lists

3.1 Happy 99 Virus

Earliest such alert at **03:59:51.460766** on 10/05

Latest such alert at **16:06:44.170359** on 11/06

Happy 99 Virus	2 sources	2 destinations
----------------	-----------	----------------

Sources triggering this attack signature

Source	# Alerts (sig)	# Alerts (total)	# Dsts (sig)	# Dsts (total)
216.6.117.11	1	1	1	1
209.94.224.13	1	1	1	1

Destinations receiving this attack signature

Destinations	# Alerts (sig)	# Alerts (total)	# Srcs (sig)	# Srcs (total))
MY.NET.6.35	1	5	1	4
MY.NET.253.41	1	324	1	21

The victim hosts are on the SMTP connection. The virus may spread out by the mail server.

3.2 Tiny Fragments - Possible Hostile Activity

Earliest such alert at **21:25:17.293957** on 09/26

Latest such alert at **14:39:19.160234** on 11/16

Tiny Fragments - Possible Hostile Activity	5 sources	6 destinations
--	-----------	----------------

Sources triggering this attack signature

Source	# Alerts (sig)	# Alerts (total)	# Dsts (sig)	# Dsts (total)
62.6.71.0	2	2	1	1
216.43.55.44	2	2	2	2
202.156.51.76	1	1	1	1
192.206.151.152	1	1	1	1
172.157.126.93	1	1	1	1

Destinations receiving this attack signature

Destinations	# Alerts (sig)	# Alerts (total)	# Srcs (sig)	# Srcs (total)
MY.NET.181.144	2	4	1	3
MY.NET.201.198	1	5	1	5
MY.NET.201.2	1	3	1	3
MY.NET.211.2	1	24	1	7
MY.NET.202.102	1	5	1	5
MY.NET.1.8	1	53	1	9

These do not have consistent incidents, so maybe they are the normal fragments, or network noises.

3.3 External RPC call

Earliest such alert at **20:23:36.018641** on 10/10

Latest such alert at **20:28:54.871290** on 11/10

External RPC call	8 sources	3 destinations
-------------------	-----------	----------------

Sources triggering this attack signature

Source	# Alerts (sig)	# Alerts (total)	# Dsts (sig)	# Dsts (total)
63.162.239.69	3	3	3	3
211.46.110.81	2	2068	2	2048
200.191.80.206	2	2	1	1
200.191.80.181	2	2	1	1
38.200.223.8	1	1	1	1
12.34.21.196	1	1	1	1
24.23.151.112	1	1	1	1

24.7.227.215	1	1148	1	1144
--------------	---	------	---	------

Destinations receiving this attack signature

Destinations	# Alerts (sig)	# Alerts (total)	# Srcs (sig)	# Srcs (total)
MY.NET.6.15	9	63	7	9
MY.NET.100.130	3	8	3	5
MY.NET.15.127	1	4	1	4

The MY.NET.6.15 is the main victim of the RPC call (TCP/UDP 111) from outside of the network. Log files shuld be checked.

3.4 site exec - Possible wu-ftpd exploit - GIAC000623

Earliest such alert at **06:17:23.004770** on 10/01

Latest such alert at **16:57:49.491247** on 10/16

site exec - Possible wu-ftpd exploit - GIAC000623	4 sources	7 destinations
---	-----------	----------------

Sources triggering this attack signature

Source	# Alerts (sig)	# Alerts (total)	# Dsts (sig)	# Dsts (total)
208.61.44.215	9	9	5	5
63.202.13.20	1	6	1	6
24.31.88.99	2	2	1	1
202.9.188.89	1	1	1	1

Destinations receiving this attack signature

Destinations	# Alerts (sig)	# Alerts (total)	# Srcs (sig)	# Srcs (total))
MY.NET.100.209	1	2	1	2
MY.NET.205.94	4	9	3	6
MY.NET.97.206	1	3	1	3
MY.NET.130.242	3	4	1	2
MY.NET.130.81	1	2	1	2
MY.NET.99.130	1	2	1	2
MY.NET.221.82	2	2	1	1

3.5 Probable NMAP fingerprint attempt

(The address list is too long to put them here only top IP addresses will list.)

Earliest such alert at **13:38:00.767581** on 10/06

Latest such alert at **22:44:52.018936** on 11/22

Probable NMAP fingerprint attempt	14 sources	13 destinations
-----------------------------------	------------	-----------------

These fingerprint attempts are from different source hosts to different destination hosts, and last a long time. I think this is not serious. There has no top talker and no top listener. All the hosts involved have 1 or 2 alerts.

3.6 connect to 515 from inside

Earliest such alert at **13:26:43.509292** on 11/19

Latest such alert at **11:33:56.296324** on 11/22

connect to 515 from inside	2 sources	3 destinations
----------------------------	-----------	----------------

In Nov 19, the alert was triggered by the source IP MY.NET.101.142 to destination IP MY.NET.100.3. More investigate need to check what happened with the MY.NET.101.142 and MY.NET.100.3. The 515 port used for spooler.

In addition, other host MY.NET.179.78 hit the outside hosts 64.244.202.110 and 64.244.202.66 (igw.healthcrite.com) which belong to Bussiness Internet. We should figure out why. Maybe someone inside the network was sending out some information.

3.7 SUNRPC highport access!

Earliest such alert at **13:28:03.304676** on 09/28

Latest such alert at **03:50:53.188444** on 11/21

SUNRPC highport access!	13 sources	12 destinations
-------------------------	------------	-----------------

The rpc service port 32771 is hitted. Some of the destination may be compromised. The top talker is 216.10.12.30(gravity.cpanel.net) which belongs to Darkorb Communications, while the top listeners are MY.NET.206.222 and MY.NET.202.242.

There was no relative portmapper to them.

3.8 NMAP TCP ping!

Earliest such alert at **05:40:00.709907** on 09/26

Latest such alert at **22:06:00.355840** on 11/22

NMAP TCP ping!	21 sources	20 destinations
----------------	------------	-----------------

The 192.102.197.234 is the top talker while MY.NET.1.8 is the top listener.

3.9 Queso fingerprint

Earliest such alert at **04:27:59.343599** on 09/26

Latest such alert at **16:10:36.268157** on 11/22

Queso fingerprint	29 sources	58 destinations
-------------------	------------	-----------------

Queso fingerprint is used to find out what kind of system the host is. 24.3.161.193 is the top talker while MY.NET.145.9 is the top listener.

3.10 SMB Name Wildcard

Earliest such alert at **11:19:08.075062** on 10/01

Latest such alert at **09:27:51.910085** on 11/22

SMB Name Wildcard	33 sources	33 destinations
-------------------	------------	-----------------

The top talkers are MY.NET.101.160 and 141.157.99.21 while the top listeners are MY.NET.101.192 and MY.NET.6.15. 93 alerts are MY.NET.101.160 -> MY.NET.101.192. This should be noticed. Further investigation should be done to these two hosts. It might be a mis-configuration of Windows network.

3.11 Null scan!

Earliest such alert at **10:58:55.817608** on 09/26

Latest such alert at **20:33:10.371736** on 11/22

Null scan!	204 sources	196 destinations
------------	-------------	------------------

This is the network scan with no flag set. It could be generated by NMAP. The top talkers are 24.113.148.32 and 24.112.150.20, who are the Rogers @home cable users. The top listeners are MY.NET.105.120 and MY.NET.218.46.

3.12 SNMP public access

Earliest such alert at **11:17:47.004982** on 10/01

Latest such alert at **17:32:56.420810** on 11/19

SNMP public access	23 sources	1 destinations
--------------------	------------	----------------

All the sources are on the MY.NET. The only destination is MY.NET.101.192. Check the MY.NET.101.192. If it provides some snmp information to the whole network, these are all false positive.

3.13 Back Orifice

Earliest such alert at **15:01:27.048398** on 10/01

Latest such alert at **03:16:06.961852** on 11/21

Back Orifice	40 sources	932 destinations
--------------	------------	------------------

Back Orifice provides the back door to access your network. The top talkers are 62.136.90.120 (Planet Online Limited, a UK company) and 63.46.46.143 (a user from UUNET). There is no top listener. All the hosts involved have around 6 alerts. It may mean that somebody in the Internet just try to find if Back Orifice is installed on your network. Usually, one must have the password of back orifice server can he/she connect to the back orifice server. If you have Back Orifice installed, please do not use the default password!

3.14 Broadcast Ping to subnet 70

Earliest such alert at **14:48:07.021725** on 10/03

Latest such alert at **03:52:13.369033** on 11/17

Broadcast Ping to subnet 70	216 sources	1 destinations
-----------------------------	-------------	----------------

The MY.NET.70.255 network is the victim. The top talkers are 193.231.169.166, 193.226.60.179 and 193.231.220.101 who are from Romania.

3.15 Attempted Sun RPC high port access

Earliest such alert at **08:34:21.306733** on 09/26

Latest such alert at **20:58:24.675341** on 11/22

Attempted Sun RPC high port access	20 sources	33 destinations
------------------------------------	------------	-----------------

The top talkers are from the 205.188.153.x network. These are AOL users. The top listeners are MY.NET.221.246, MY.NET.225.210 and MY.NET.217.214.

3.16 TCP SMTP Source Port traffic

Earliest such alert at **13:10:15.618101** on 10/23

Latest such alert at **20:09:16.403626** on 11/19

TCP SMTP Source Port traffic	4 sources	2836 destinations
------------------------------	-----------	-------------------

The 4 source addresses are following

Source	# Alerts (sig)	# Alerts (total)	# Dsts (sig)	# Dsts (total)
211.46.110.81	1789	2068	1789	2048
24.7.227.215	1096	1148	1096	1144
194.67.168.11	6	6	6	6
194.88.77.240	2	2	1	1

211.46.110.81 is from Asia Pacific Network Information Center

24.7.227.215 is a user from @Home. He/she may be a cabel modem user.

No top listener, all the destinations had 1 or 2 alerts.

The most hitted port of the destination ports is 25, SMTP, and a little of others greater than 1000.

3.17 WinGate 1080 Attempt

Earliest such alert at **00:00:52.873106** on 09/26

Latest such alert at **23:32:20.988483** on 11/22

WinGate 1080 Attempt	570 sources	2655 destinations
----------------------	-------------	-------------------

The Top talker is 63.193.210.208, a user from Pacific Bell Internet, while top listener is MY.NET.206.118.

In Oct.5 18:58 – 19:03, the 63.193.210.208 host tried to find a WinGate proxy all over the network.

3.18 Watchlist 000222 NET-NCFC

Earliest such alert at **01:43:43.866602** on 09/26

Latest such alert at **21:27:46.757337** on 11/22

Watchlist 000222 NET-NCFC	45 sources	26 destinations
---------------------------	------------	-----------------

This is the watchlist of networks from Chinese Academy of Science. The Top talkers are 159.226.45.3 and 159.226.91.20 who are from China. The top listeners are MY.NET.6.7, MY.NET.100.230. The 159.226.45.3 -> MY.NET.6.7 alert is the toppest alert.

The port of 25, SMTP, is the most destination port among them. If GIAC Enterprise has many Chinese mail clients (From "The Computer Network Center Chinese Academy of Sciences"), that could be the normal traffic. Otherwise, Smail attack or some other attacks to the mail vulnerability could have happened.

3.19 Watchlist 000220 IL-ISDNNET-990517

Earliest such alert at **01:14:52.325234** on 09/26

Latest such alert at **14:58:55.189582** on 11/22

Watchlist 000220 IL-ISDNNET-990517	61 sources	108 destinations
------------------------------------	------------	------------------

This is a Watchlist of Israel Net. The Top talkers are 212.179.95.5, 212.179.27.6, 212.179.79.2 and 212.179.44.115 who triggered the alert about 4000. The top listeners are MY.NET.211.146, MY.NET.223.98 and MY.NET.206.90. The interesting stuffs in the Watchlist are ports 6688 and 6699. They are the Napster ports!

3.20 SYN-FIN scan!

Earliest such alert at **13:10:30.153412** on 09/30

Latest such alert at **09:33:33.732424** on 11/22

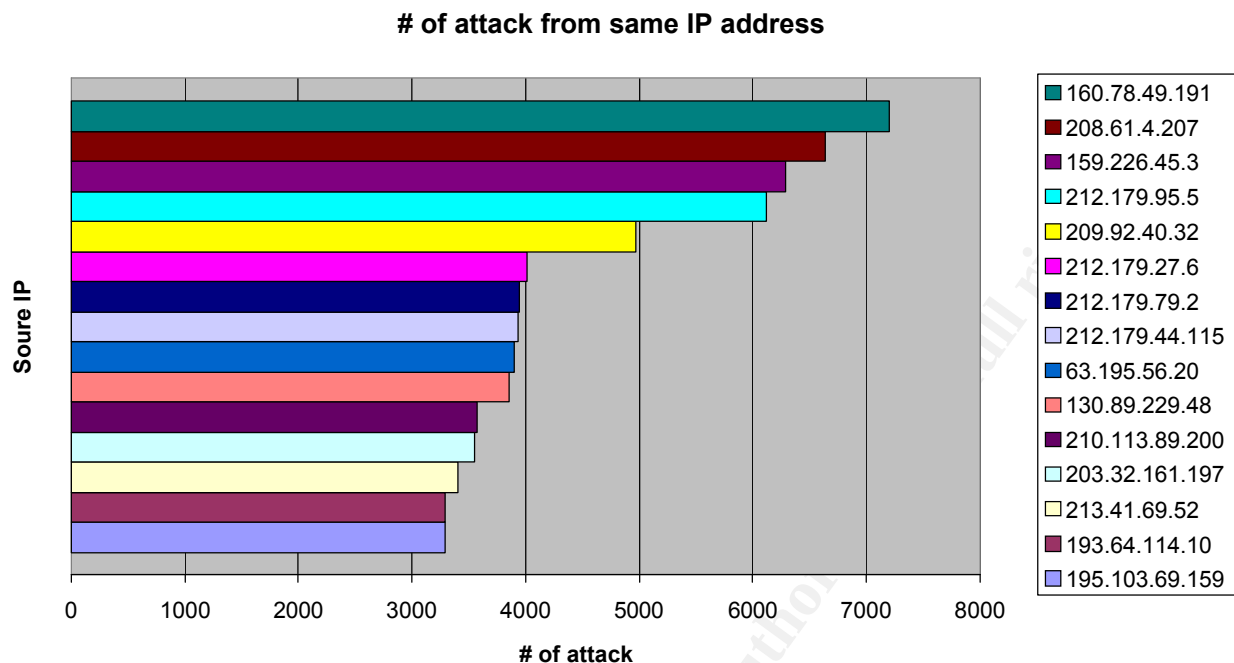

SYN-FIN scan!	30 sources	25751 destinations
---------------	------------	--------------------

The SYN-FIN scan is a network scan that SYN and FIN flags are set at the same time. It is impossible in the real world. The top talkers are 160.78.49.191 and 208.61.4.207. They are also the top talkers in the total alert files. Almost all the network was scanned. The mean alerts for them are around 5.

4. Top users in alert files

4.1 Top 15 Source IP addresses

%	#	Source IP address
6.52	7199	160.78.49.191

5. Who are the top talkers

5.1 160.78.49.191

Name: Centro di Calcolo di Ateneo
Country: Italy

5.2 208.61.4.207

BellSouth.net Inc.
It may be a user who using Bell South as his/her ISP.

5.3 159.226.45.3

Name: The Computer Network Center Chinese Academy of Sciences
Country: China
DNS: aphy.iphy.ac.cn

5.4 212.179.95.5

Name: CABLE-XPRMNT
Cable-Modem-Experiment
Country: Israel
It could be a Cable modem user from Israel

5.5 209.92.40.32

FASTNET(tm)-You Tools Corporation
DSL Network
It may be the dsl user of Fastnet

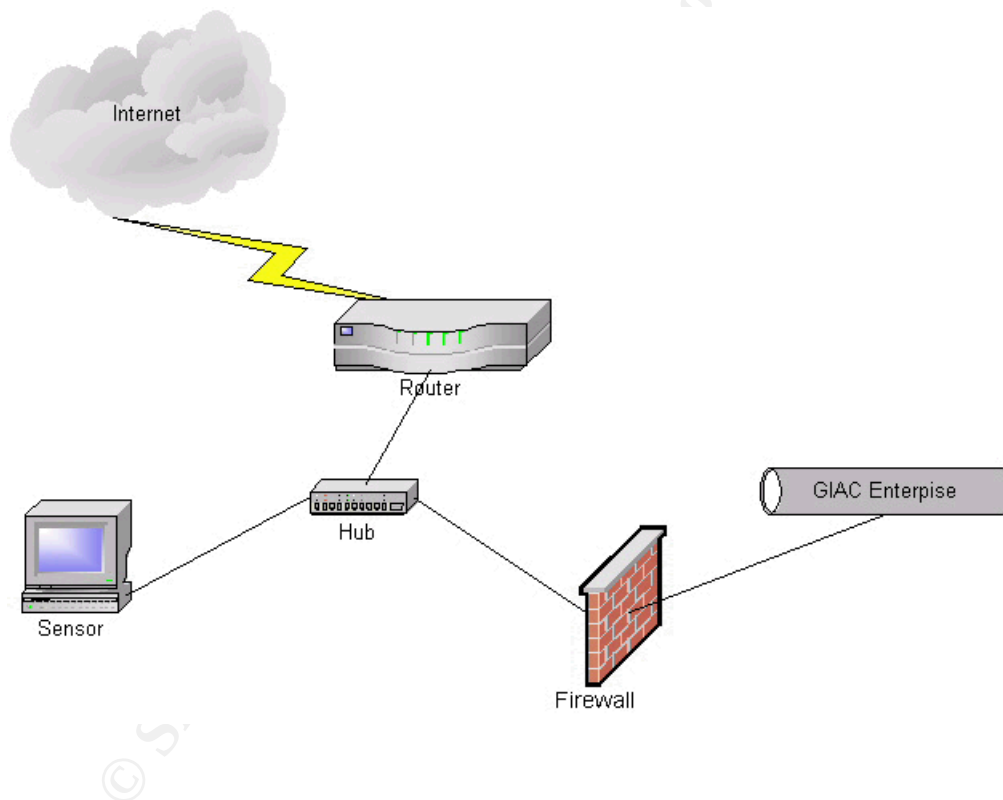

5.6 I can not find DNS names for them except the Chinese one. Source IP address may spoofed.

Reaction to these IP addresses should be caution.

6. Internal hosts look up

What could happen on the destination host inside the network when a packet triggers the alert? It depends on the sensor location, firewall policy as well as the attack methods. However, we still can image that what could happen to some of the hosts.

We assume the GIAC network topology is like the following map. The sensor is located outside the firewall.

6.1 Possible compromised hosts

MY.NET.6.35 and MY.NET.253.41: Possible virus attack.

MY.NET.205.94 and MY.NET.130.242: ftp exploit.
MY.NET.206.222 and MY.NET.202.242: SUNRPC high port attack.

6.2 Suspect hosts

The following host should take a further look up, it may be normal or only reconnaissance.

MY.NET.101.192: Check SNMP configuration.
MY.NET.6.7 and MY.NET.100.230: SMTP from Chinese hosts in Watchlist
MY.NET.211.146: Check the port 4922
MY.NET.233.98: Napster

6.3 Network misconfiguration

MY.NET.101.160 and MY.NET.101.92: Check Windows PDC, WINS and Master Browser setting

7. Defensive recommendations

According to the network diagram above, we recommend:

- 7.1 A stateful firewall is required in the edge of the GIAC Enterprise network. At least a security enforcement at the router, and doing filtering at the router.
- 7.2 Separate the network into two parts. Hosts in part one provide services to the Internet and hosts in part two do not provide service to the Internet. Decrease the amount of hosts in part one as small as possible.
- 7.3 Patch the all the hosts in part one, who face to the Internet.
- 7.4 Create the firewall policy (or router filtering policy) for part one. Deny everything go inside.
- 7.5 Create the firewall policy (or router filtering policy) for part two. Allow only the specified service to specified host. If it can not be done, at least deny the dangerous destination ports below 1024 like rpc port 111.
- 7.6 Put another IDS sensor on the inside network. The sensor could tell you if any host in the GIAC Enterprise has been compromised.

8. Summary

The snort alert logs provide so many informations of the attacks and attack attempts to the GIAC Enterprise network. Some of the hosts in the network may be compromised; some of them were heavily scanned. If the host is compromised, the attacker has got what he/she wants. If the host is heavily scanned, the informations of your network including the network topology, type of host, operating system may be release to the potential attackers.

We provide the attack survey list, top talker list, top destination host list in GIAC network. We also provide some graphs, statistics informations and analysis to each type of the attack. We found some serious attacks like happy99, wu-ftp exploit, sunrpc high port access. We found many scan technologies were deployed to scan your network including SYN/FIN scan, Null scan, Tiny fragment, OS fingerprint scan, etc. We also found some interesting stuff like mail clients from China, Napster from Israel, etc.

However, this is not enough. To pinpoint what's going on of some kinds of alert, we still need more investigation. We'd like to have a look of the original log file. Check the content, or check the time correlation of the different alert.

In addition, we made some recommendation to protect your network, and suggestion to install another IDS to get more correlative alert informations. Therefore, you can protect your network better.

The information warfare is endless....

9. Correlation and Link URL

Many thanks to the previous GIACs. I read many of their practicals obtaining many informations and ideas from their thesis. I learn a lot more for the Intrusion Detection System by doing this practical.

Assignment 2 – Analysis Process

1. Raw data

The raw data was downloaded from the SANS website, 3 zip files were downloaded, which including the alert files, OScheck log files and scan files

2. Data process

It took me a long time to process the data. The data is too large that some of the tools can not process them.

2.1 The data files do not follow the date sequence, so first thing I did was to open all the files, find what date it is. I created 3 'file and date' lists for the 3 files.

2.2 I sorted the files with date, delete the redundant files. I wrote the C program, `prepare.c` (See 5.8), to delete all the head of each file, and put the all files together into one alert file for the further process. The script files to put the alert files together are `combine1` and `combine2` (See 5.9).

2.3 When I tried a sample alert file to run **Snortsnarf**, I found something abnormal. All the source and destination host count is "1", and I can not see an IP address related to that detect. I checked the sample alert file again. It is okay. I ran snort in my network, took out my snort alert file and ran against the snortsnarf. It was normal.
So, there must be something wrong with the data. I opened the snort alert file again, compared it with my alert file, read other GIAC's practical assignment and found that the 'MY.NET' in the data file fools the snort perl script file.

2.4 I opened the alert file with word, and searched for "172.20" that was not any address in the alert file had the 172.20 network. So I replace the "MY NET" with "172.20". The "172.20" should be replaced back "MY.NET" in the report to keep the consistency.

2.5 Next, I tried to run Snort_stat against the sample file. I could not get any result only the error information said that it was not a snort alert file. I opened the perl script file and tried to troubleshoot the script file. I found that the script file was trying to read the alert file that begins with `[**]`. After I came back from the snort manual and web site. I understood that these perl scripts, (include the snort-sort) assumed that the alert file was a long mode snort alert file. However, what I had was the fast mode snort alert file.

2.6 I compared the fast mode and long mode snort alert files. Long mode has more information and the order of some fields is not the same as fast mode. I wrote another c program, fast2long.c (See 5.8) to transform the alert file from fast mode to 'long' mode. Although this 'long' mode alert is not the real long mode snort alert file. Fortunately, the perl scripts can be cheated.

3. Memory and disk problems

It made me very frustrated with the memory and disk problem.

3.1 When I finished the data processing, I thought I could get the result soon. However, another problem arose. I had two Intel PIII machines with 128M and 64M to do my practical assignment. Windows NT is installed on one machine with 128M RAM, Solaris 7 is installed on the other machine with 64M. When I was running the snortsnarf against the large alert file in the Solaris, only I got was "out of memory".

- 3.2 I thought maybe 64M RAM was not enough for running snortsnarf against such big an alert file, maybe 180M would work. I opened the two cases of the two machines, and moved the memory from Windows machine to the Solaris machine. Then I run the snortsnarf again and I failed again.
- 3.3 I had no way at that moment. So I divided the large alert file into 3 files. I hoped I could use other tools like excel to get the aggregation result. After I got the 3 results from snortsnarf, I used the excel to put them together. But finally, I found although I could get the survey of the 20 types of attack, I could not get detail informations like source IP survey, destination IP survey, how many attacks related to 1 IP address, etc from excel.
- 3.4 I had to go back to seek a more powerful machine. It is my lucky. I found a Sun Ultra 10 with 1GRAM. I moved everything from Intel Solaris to the Ultra 10. And after around 1 hour running. I get the result from the snortsnarf.
- 3.5 When I thought I had got everything, I found I wrong again, my 800M temp partition was full, and the result may be incomplete. Another hour's work just moving to another big partition.
- 3.6 Suggestion to ones who want to do it again. The system requirement:
Sun Ultra 10 with 1GRAM and 2G Partition

4. Analysis process

- 4.1 Get the raw data
- 4.2 Write the c program and script files to format the data
- 4.3 Run snortsnarf, snort-sort, and snort_stat
- 4.4 Use excel to aggregate the top users from snort_stat generated data.
- 4.5 From the snortsnarf generated html file, do the analysis, using the snort-sort for detail information.

5. Tools and programs

- 5.1 SnortSnarf, get the survey information about the attack methods, source and destination IP addresses
- 5.2 Snort-Sort, sort the alert file with same attack methods
- 5.3 Snort_stat, get the statistics data
- 5.4 Snort2html, useless
- 5.5 Excel, aggregate the statistics data, format the data, generate the chart.
- 5.6 gcc, compile the c file
- 5.7 Visio, draw network diagram
- 5.8 C programs as following

```

-----prepare.c file to cut the unwanted head-----
// Deleted the un-wanted file head from the snort alert file
//
// Meanwhile, the spp_scan re-organized,
// Pick up the source address for the alert title,
// Put the 0.0.0.0 as destination IP address.
//
// The PORTSCAN DETECT and portscan status lines are deleted.
//

#include <stdio.h>
#include <string.h>
