# Index of Tables

Table 1: Roles & Responsibilities	
Table 2: Acronyms	9
Table 3: ISO27001 Standard policies	12

#### 1. Introduction

The use of handheld devices is increasing in corporate environments, providing mobile services and constant connectivity to mobile workers. Due to the fact that handheld devices are recent and not yet properly managed, they present new threats to corporate assets. Handheld devices combine security challenges posed by laptops, removable storage (e.g. USB keys), and cameras.

#### 1.1 Purpose

This security policy establishes rules for the proper use of handheld devices in corporate environments in order to protect the confidentiality of sensitive data, the integrity of data and applications, and the availability of services at <COMPANY NAME>, protecting both handheld devices and their users, as well as corporate assets (confidentiality and integrity) and continuity of the business (availability).

#### 1.2 Scope of application and obligations

This policy applies to all employees, consultants, vendors, contractors, students, and others using business or private mobile handheld devices on any premises occupied by <COMPANY NAME>.

Adherence to these requirements and the security policies derived from them and

implementation of provisions is binding across the whole of <COMPANY NAME>, its subsidiaries and majority holdings.

Willful or negligent infringement of the policies jeopardizes the interests of <COMPANY NAME> and will result in disciplinary, employment, and/or legal sanctions. In the case of the latter the relevant line managers and where applicable legal services shall bear responsibility.

These requirements and the security policies derived from them and implementation provisions also apply to all suppliers of <COMPANY NAME>. They shall be contractually bound to adhere to the security directives. If a contractual partner is not prepared to adhere to the provisions, he must be bound in writing to assume any resulting consequential damage (see also [1]).

#### 1.3 Roles & responsibilities

All employees are responsible for adhering to the information security provisions.
 Specific tasks are documented in the definition of roles.

2. For each role a person must be defined by name and made known to the IT security department.

3. Individuals may assume several roles.

4. Definition of roles applies to all the security policies and implementation provisions

derived from this policy.

5. IT security ensures that the roles are documented consistently in corporate quality

management.

The following table represents roles and responsibilities at the management level:

Name	Responsibilities
Business owner	Ensures the necessary resources are provided to IT department
IT governance	<ul> <li>Maintains security policies:</li> <li>Creation, adaptation to existing policies in place</li> <li>Maintenance up-to-date</li> <li>Guidelines and procedures to implement this policy exist and are communicated to the intended people</li> <li>Policy and procedures are documented</li> <li>Policies and procedures are well communicated</li> <li>Is responsible for policy enforcement:</li> </ul>

Table 1: Roles & Responsibilities

Handheld Devices

	- Ensures that users are properly trained
IT department, IT staff,	Are responsible of managing mobile handheld devices
security administrator,	Manage the inventory
devices manager	Ensure that the necessary services are available to users
	Provide the necessary resources for the use of services
	Are responsible for policy enforcement:
	- Via the appropriate working controls
	- Make requests for changes/adaptations in this policy to
	IT governance
Users, Employees	Must read, understand and agree to security policies
.3	<ul> <li>Must conform to security policies</li> </ul>
	<ul> <li>Must inform IT staff of exceptions to security policies</li> </ul>

# 1.4 Target readership

This corporate security policy for the use of handheld devices is intended for mid-size to large companies, which need to manage a large number of users using a Mobile Device Management (MDM) solution to monitor and control those devices.

This policy template is aimed at IT governance (from table 1), which is in charge of adapting this template, according to the business risk analysis and the resources available to implement security controls, to present a final version of the policy that does not leave its interpretation to users.

The IT department is responsible of the application of this policy in a practical sense. It is in charge of mobile devices management and is responsible for providing the necessary complementary documentation and information for the best application of this policy.

#### Important notice:

This security policy remains as general as possible, depicting various options or scenarios that must be applied according to the business risk analysis. IT governance has the responsibility to enable a secure environment without impairing the functionality of relevant devices and services.

#### 1.5 How to use this security policy template

The security policy template is a long document organized in 5 parts:

- Organizational security processes
  - Physical security
  - Operating system security

- PAN security
- Data security
- Corporate network access security
- OTA provisioning security
- Internet security

<u>Copyright</u>: This document is a policy template, free of copyrights. It must be adapted to your specific organization and according to your business risk analysis and the available resources (time, budget, staffs). You are authorized to modify, adapt, or change this policy template as required.

Persons responsible for the security of handheld devices will need to adapt this document to fit the needs of their own organization. Basically, sentences using the verb "SHALL" are mandatory requirements applying to practices with high probability of putting the business at risk, whereas "SHOULD" means that the policy needs to be applied according to the business's specific situation.

Note that *this policy does not take into account specific country or industry regulations*. As a result, some parts of this policy might be adapted to fit country-specific needs. For example, in the healthcare industry compliance to HIPAA regulation is mandatory in the U.S.A., which has specific implications for privacy of data and encryption standards.

- WTLS Wireless Transport Layer Security
- XML Extensible Mark-up Language

#### 1.7 Definitions

The following definitions have been added for the reader so as to be precise about the terms. Note that these definitions have changed slightly due to recent changes to current

operating systems.

<u>Handheld device</u>: A communication device small enough to be carried in the hand or pocket and variously known as a personal digital assistant or personal communication device. Handheld devices considered in this document provide a broad range of services beyond simple telephony, and are closer to mobile computers than legacy mobile phones.

Examples of handheld devices: pocket PCs, smartphones, palmtops, the Blackberry.

<u>Pocket PCs</u>: Handheld devices having a touchscreen and a stylus, in addition to smartphone functionality. For Windows Mobile Pocket PCs, two distinct versions exist that present functions in addition to Windows Mobile Standard:

Pocket PC: Windows Mobile Classic

Pocket PC Phone Edition: Windows Mobile Professional

<u>Smartphones</u>: The principal difference with pocket PCs is that smartphones do not have a touchscreen. Sometimes this results in a slightly different implementation at the OS level. However, the word "smartphone" recently has become a universal term to designate all types of handheld devices (including both pocket PCs and smartphones). In this document, "smartphone" is synonymous with handheld devices.

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document

are to be interpreted as described in RFC 2119.

#### 1.8 References

This security policy for the use of handheld devices complements a set of existing corporate security policies that are listed below. Those security policies might override this policy; in that case, pointers to the relevant policies are provided.

The following security policies SHOULD exist (or a different set of policies covering the same security areas) and remain available to all employees, and respective guidelines and implementation guides must be provided and remain available to IT staff. The policies are provided with references to corresponding sections of ISO/IEC 27002.

		Necessary third-party applications SHALL be tested prior	
		to authorization and publication on the list of authorized	
		applications.	
		The list of authorized applications MUST be published on	
		corporate intranet.	
Certificates		Only IT department staff are authorized to manage	A.12.4
management		(install and revoke) certificates on handhelds.	[Security of
			system files]
		The IT department MUST provide the necessary	
		certificates to enable all required services to users. Only	A.12.5.3
	5	the IT department can install certificates in the root	[Restrictions
		certificates store or in the intermediate certificates store	on changes
		(if available).	to software
		Users SHALL NOT revoke certificates in the root	packages]
		certificate store. If users are allowed to install third-party	

	 	IEIU DEVICES
	applications, users' certificates MUST be placed only in the user certificates store or intermediate certificates	6
	store.	
Antivirus policy	Mobile devices MUST have antivirus software installed to	10.4
	prevent viruses from being vectored into the	[Protection
	corporation—either as e-mail attachments or through file	against
	transfers.	malicious
		and mobile
	Antivirus software MUST be configured in order to:	code]
	- Do automatic signature update when connected to	
	desktop PC or wireless network	
	- Do automatic and regular scan of device	
Firewall	THIS FEATURE DOES NOT EXIST ON ALL EXISTING	10.4
	PLATFORMS YET.	[Protection
	If available, handheld devices MUST use their own	against
		malicious
	application-level firewall to ensure their integrity.	and mobile
	Possibly, the firewall might report security information to	code]
	corporate mobile device management system.	

	The personal firewall acts as the first logical line of	
	defense against penetration attacks. Main functions	
	performed by a personal firewall are:	
	1. Monitoring incoming traffic and blocking suspicious	
	code	
	2. Monitoring outgoing messages that infect other	
	company resources	
	3. Preventing unauthorized use of logical ports by hiding	
	them from malicious code or human penetration attempts	

# 2.4 Personal Area Networks (PAN) security policy

Personal Area Networks (PAN) security policy			
Policy		Description	ISO control
Bluetooth	6.9	No Bluetooth Device shall be deployed on <company< td=""><td></td></company<>	
version	2	NAME> equipment that does not meet Bluetooth v2.1	
		specifications without written authorization from the	
		Information Security Manager.	
		Any Bluetooth equipment purchased prior to this policy	

		MUST comply with all parts of this policy except the	5
		Bluetooth version specifications.	
PAN PINs and		When pairing two communicating devices in a PAN,	A.11.3.1
pairing		users should ensure that they are not in a public area. If	[Password
		the equipment asks for a PIN after it has been initially	use]
		paired, users MUST refuse the pairing request and	
		immediately report it to IT department or the help desk.	
		Unless the device itself has malfunctioned and lost its	
		PIN, this is a sign of a hack attempt.	
		Care must be taken to avoid being recorded when	
		pairing Bluetooth adapters; Bluetooth 2.0 Class 1	
		devices have a range of 100 meters.	
Bluetooth		All Bluetooth devices SHALL employ "security mode 3,"	
device security	5	which encrypts traffic in both directions between a	
settings		Bluetooth Device and its paired equipment.	
		Switch the Bluetooth device to use the hidden mode, and	
		activate Bluetooth only when it is needed.	
		Note that enabling encryption of Bluetooth connections	

		restricts the number of compatible devices to exchange	5
		data with.	
File transfer		File transfers between devices in close range (PAN),	A.7.1.3
(beam) in PAN		taking place over Bluetooth or Infrared, MUST take place	[Acceptable
		only between authenticated parties, which MUST agree	use of
		on a pairing key as defined in section 4.2: PAN PINs and	assets]
		pairing.	
		Anonymous connections (i.e. without pairing) MUST	
		NEVER take place.	
PAN security		Information security staff SHALL perform audits for	
audits		Bluetooth and IrDA to ensure compliance with this policy.	
		In the process of performing such audits, information	
		security auditors SHALL NOT eavesdrop on any phone	
		conversation.	
Unauthorized	5	The following actions are unauthorized uses of	A.7.1.3
use of		<company name="">-owned Bluetooth/IrDA devices:</company>	[Acceptable
			use of
Bluetooth/IrDA		- Eavesdropping	assets]

Hand	held	Devices

			1
		- Device ID spoofing	5
		- DoS attacks	
		- Any attack against other Bluetooth/IrDA enabled	
		devices	
		<ul> <li>Using &lt; COMPANY NAME&gt;-owned</li> </ul>	
		Bluetooth/IrDA equipment on non-< COMPANY	
		NAME>-owned Bluetooth enabled devices	
		- Unauthorized modification of Bluetooth/IrDA	
		devices for any purpose	
Bluetooth/IrDA		It is the Bluetooth/IrDA user's responsibility to comply	A.7.1.3
user		with this policy.	[Acceptable
			use of
responsibilities		Bluetooth/IrDA users MUST access <company< th=""><th>assets]</th></company<>	assets]
		NAME> information systems using only approved	
	5	Bluetooth/IrDA device hardware, software, solutions, and	
	2	connections.	
		Bluetooth/IrDA device hardware, software, solutions, and	
		connections that do not meet the standards of this policy	

		SHALL NOT be authorized for deployment.
		Bluetooth/IrDA users MUST act appropriately to protect
		information, network access, passwords, cryptographic
		keys, and Bluetooth/IrDA equipment.
		Bluetooth/IrDA users are required to report any misuse,
		loss, or theft of Bluetooth/IrDA devices or systems
		immediately to information security.
Infrared IrDA		Infrared support MUST be disabled if Bluetooth
		connectivity is supported. Bluetooth MUST be preferred
		to IrDA when available.
		If IrDA support has to be enabled, pairing with other
		devices MUST use long pairing keys as defined in
		section 4.2: PAN PINs and pairing.
	2	Security policy for Bluetooth also applies to IrDA the
		same way:
		- PAN PINs and pairing (section 4.2)
		- PAN security audits (section 4.5)
		·

Handheld Devices

	- Unauthorized use of Bluetooth/IrDA (section 4.6)
	- Bluetooth/IrDA user responsibilities (section 4.7)

### 2.5 Data security

Data security		A.7 Asset I	Vanagement
Policy		Description	ISO control
Information		The information classification policy 0applies restrictively	A.7.2
classification		to handheld devices as it applies to laptops.	[Information
		A handheld device SHALL NOT be used to enter or store	classification]
		passwords, safe/door combinations, personal	
		identification numbers, or classified, sensitive, or	
		proprietary information.	
		Corporate documents are classified according to their	
	2	level of confidentiality e.g.:	
	2	- Public documents	
		- Internal documents	
		- Confidential documents	

		- Strictly confidential or secret documents	5
		- Secret and confidential documents MUST NEVER	
		be stored on end devices.	
		Internal documents SHOULD NOT be stored on mobile	
		devices unless strictly necessary (cf. Information	
		classification and control policy 0).	
		Public documents can be carried on mobile devices	
		without risk. However, if not needed, public corporate	
		files MUST be removed from the device.	
Data security		Mobile handheld devices containing confidential,	A.10.7
		personal, sensitive, and generally all information	[Media
		belonging to <company name=""> SHALL employ</company>	handling]
		encryption or equally strong measures to protect the	
	5	corporate data stored on the device, as stated in	
		corporate encryption standards 0.	
		If memory encryption is not available natively in the	
		device, a third party application SHALL be purchased.	

	Note: As of the date of this paper, U.S. government use	5
	requiring encryption algorithms must meet National	
	Institute of Standards and Technology FIPS PUB 140-2.	
	Corporate data, i.e. any corporate file, even public,	A.10.7
	MUST not be stored in persistent (or device) memory,	[Media
	but rather in memory card (SD or MMC). See section	handling]
	5.4.	
	Removable storage on smartphones (e.g. SD cards)	A.10.7
	MUST be encrypted in order to prevent data theft on	[Media
	storage card.	handling]
	Usually, encryption of MMC is natively built in devices.	
	Encryption of MMC MUST be turned on.	
	Third-party encryption software might be used if native	
S	platform does not offer the option of data encryption on	
	MMC.	
	Data on handheld devices MUST be backed up regularly	10.5
	according to corporate backup policies 0, which should	[Backup]
		requiring encryption algorithms must meet National Institute of Standards and Technology FIPS PUB 140-2. Corporate data, i.e. any corporate file, even public, MUST not be stored in persistent (or device) memory, but rather in memory card (SD or MMC). See section 5.4. Removable storage on smartphones (e.g. SD cards) MUST be encrypted in order to prevent data theft on storage card. Usually, encryption of MMC is natively built in devices. Encryption of MMC MUST be turned on. Third-party encryption software might be used if native platform does not offer the option of data encryption on MMC. Data on handheld devices MUST be backed up regularly

#### Security Policy Template – Handheld Devices

			neiu Devices
		The following data, at least, MUST be backed up:	5
		- Corporate information	
		- Address book	
		- Agenda	
		- Tasks/notes	
		- Device configuration settings	
		<u>Note</u> : this part of the policy might override the backup	
		policy 0if this latter already takes into account handheld	
		devices.	
Private data on		According to <company name=""> risk analysis:</company>	A.12.4.2
corporate		Users are not allowed storage of private data on their	[Protection of system test
devices –		handheld devices; in this case:	data]
general	5	Users MUST NOT store any private data on corporate	
considerations		devices. The device's user has full responsibility for	
		managing its data. Especially in cases of device theft,	
		<company name=""> cannot be held responsible in any</company>	
		manner for the (malicious) use of private information.	

#### Security Policy Template – Handheld Devices

Users are allowed storage of private data on their
handheld device:
If users want to store private data on corporate devices
at their own risk, the best practices recommend using a
dedicated wallet application that encrypts confidential
data using a password, following corporate standards for
encryption 0.
Note: the passphrase in use for the wallet MUST be
different from the password in use to block the device.

### 2.6 Corporate networks access security

Corporate networks access security A.11 Ac		cess Control	
Policy		Description	ISO control
Network		All devices, including handhelds that have to connect to	A.11.4.3
access control		internal networks MUST be identified by IT department	[Equipment
		for Network Access Control purposes, after they are	in networks]
		declared in the corporate inventory.	A.11.4.6
		Any attempt to access corporate networks with an	[Network

		, iand	neia Devices
		unknown device will be considered as an attack against	connection
		corporate assets.	control]
File sharing		File-sharing services MUST be disabled, independently	A.12.4
		of the transport technology.	[Security of
		If enabled, outboutingtion MUCT be in place to force the	system files]
		If enabled, authentication MUST be in place to force the	
		identification of the communicating party: no anonymous	A.7.1.3
		access shall be possible. Guidelines or a policy depicting	[Acceptable
		valid passwords are available in the password policy 0.	use of
		Note: File sharing allows users to create a shared folder	assets]
		on their phone in order to make it accessible through the	
		network, like the <i>folder sharing</i> capability on Windows	
		desktop computers.	
Remote access		Compliance of all staff (employees, consultants, vendors,	A.7.1.3
to corporate	5	contractors, and students) using PDAs with the remote	[Acceptable
racourcas		access, Teleworking 0, disposal of information / media /	use of
resources			assets]
		equipment 0, and other applicable policies, procedures,	A.11.4.1
		and standards is mandatory.	[Policy on
			use of

			network
			services]
		J.	A.11.4.2
		5	[User
			authenticatio
			n for external
			connections]
Wireless		Independently of the company risk analysis, disable	A.11.4.5
support		WLAN support in the following cases:	[Segregation
			in networks]
		Whenever connectivity is not required to prevent	
		unnecessary battery consumption.	
			A.10.6
		When connected to a desktop computer to prevent the	[Network
		spread of malware.	security
			management
		Access to WLAN MUST be restricted if mobile workers	]
	S	do not require access to public, open, or untrusted	A.11.7.1
	2	WLAN, according to <company name=""> risk analysis</company>	[Mobile
		and its business model:	computing
		<ul> <li>Restrict the list of authorized access points to</li> </ul>	and
			communicati

Handheld Devices

		, , , , , , , , , , , , , , , , , , ,	ield Devices
		corporate access points only.	ons]
		- Disable connection to open/public WLANs without	
		encryption and authentication methods.	
		<ul> <li>Disable connecting to WEP-protected WLANs</li> </ul>	
		(considered insecure).	
		If mobile workers do require connectivity through public,	
		open, or untrusted WLAN, then users MUST use WLANs	
		using, if available and in this order: WPA(2) encryption,	
		WEP 256 bits (or 128 bits), or finally open networks if	
		nothing else is available. Users connected to data	
		networks in an open environment MUST use a VPN	
		connection to corporate networks to avoid direct attacks	
		against the handheld and data communications.	
Internal access	2	Access using synchronization software:	A.11 [Access
to corporate		Synchronization of data with corporate desktop computer	control]
networks		or internal network must be protected. The sync	
		operation uses a third-party application to synchronize	
		mobile devices with desktop computer's email	
			L

	application.	<i>1</i> 0
	Consequently, handheld devices' access permission	ns in
	corporate networks MUST NOT overstep the	
	permissions granted to the desktop workstation	
	belonging to the same user. Furthermore, handheld	ls'
	permissions may be further restricted according to t	he
	information classification policy 0.	
	Using a desktop computer's credentials to access	
	resources in the intranet allows a handheld device t	to
	access corporate networks (and possibly the Internet	et, if
	users are allowed to) while being protected by the	
	computer's security controls (antivirus, firewall, etc.)	).
	Direct access to corporate networks through WLAN	1:
9	If handheld devices have direct access to corporate	ý
	networks, they MUST be identified and remain unde	ər
	control of IT Staff in charge of handheld devices (us	sing,
	e.g., NAC technologies).	
		I

Desktop workstation used to synchronize a handheld	A.12.4
device MUST be protected according to security policies	[Security of
for securing corporate workstations.	system files]
Among other security controls stated by corporate	
security policies, desktop workstations should make use	
of, at least:	
- An up-to-date antivirus solution	
- An application-level firewall	
Synchronization between desktop PC using Sync	A.12.4
software and the mobile device MUST be secured using	[Security of
a pairing key following corporate standards or password	system files]
policy 0.	
Security for remote access to corporate networks MUST	A.11.7
be enforced following corporate policy for mobile	[Mobile
computing and teleworking 0.	computing
Users connecting wirelessly to corporate network MUST	and teleworking]
use VPN software, either as a built-in or third-party	
	device MUST be protected according to security policies for securing corporate workstations.Among other security controls stated by corporate security policies, desktop workstations should make use of, at least: 

#### Handheld Devices

	application. Using VPN SHALL be mandatory for the
	security of communications between mobile devices and
	corporate networks.
	Without the VPN solution approved by <company< th=""></company<>
	NAME>, access to corporate networks shall not be
	granted to handheld devices.
	Most recent handheld devices contain built-in VPN
	support, although older devices might require the
	installation of a third-party VPN client.
	(Chinh)

# 2.7 Over-the-air provisioning security

Over-the-air prov	isioni	ing security	
Policy		Description	ISO control
Mobile device management		Depending on the company size, a central management capability in the organization MUST be in place.	A.10.10 [Monitoring]
		Since handheld devices are not completely under the control of the organization and are by nature mobile, the	A.11.4

53

organization MUST have a mechanism to monitor the	[Network
devices and enforce the ecourity policy from a control	
devices and enforce the security policy from a central	access
location.	control]
OTA OMA Device Management (continuous provisioning)	A.11 [Access
provisioning MUST be preferred to OMA client provisioning (one-way	control]
method WAP push), in order to constantly enforce security	
policies (permanent connection) and allow real-time	
monitoring of devices.	
<u>Note</u> that OMA DM (continuous provisioning) is	
required in order to allow remote device management	
and real-time monitoring.	
OTA Servers and gateways in corporate networks MUST be	A.11 [Access
provisioning protected against external and internal threats.	control]
architecture Mechanisms to secure servers are described in Access	
Control security policies for corporate networks.	
The security measures MUST secure the following	
functions and nodes:	
Corporate mobile gateway (PPG) should be placed in	

		Ielu Devices
	DMZ	0
	PPG must authenticate and authorize any push initiator:	
	- Trusted Provisioning Server (TPS)	
	- Mobile e-mail server	
	- Mobile Device Management Server	
	- Any corporate node using the PPG to remotely	
	communicate with mobile devices	
ΟΤΑ	Mobile devices able to use corporate data services out of	A.11 [Access
communication	corporate offices MUST use VPN encryption in order to	control]
s security	secure communications, as depicted in mobile	
	computing and teleworking policy 0.	
	VPN solutions can either be present natively in the OS or	
	be purchased as third-party software.	
	Necessary SSL certificates should be provided by	
	corporate IT department.	
	Refer to corporate policy for remote access and VPN.	

Handheld Devices

Handheld	Mobile devices MUST be configured to receive A.11 [Access
configuration	provisioning files only from a list of trusted PPGs. This
for OTA	white list of trusted PPGs MUST contain corporate PPG
provisioning	IP address only, and eventually other PPGs owned by
	the operator.
	This white list MUST be provisioned by security staff,
	and regularly pushed to end devices for security policy
	enforcement.
ΟΤΑ	Provisioning messages (using OMA DM or WAP Push) A.11 [Access
provisioning	MUST be encrypted. Necessary SSL certificates MUST
messages	be provided by corporate IT department. Note that SSL
security	certificates on OMA Device Management Server must be
	signed by a Certification Authority or by the Operator.

### 2.8 Internet Security

Internet Security					
Policy		Description	ISO control
